2023-2024

MANUAL STUDY PLAN
&
MODULE SHEETS

Industrial engineering Program

The Industrial engineering training is based on the principles of process optimization, efficient resource management and continuous improvement. This training aims to develop the fundamentals and advanced practices of this field. During this program, we explore key concepts, modeling and analysis methods relating to the supply chain, including the design of effective systems. We discover how to apply technological tools and innovative techniques to solve complex problems and increase productivity.

After solid basic training in Industrial Engineering acquired during the first four semesters, engineering students choose from two specialty courses:

- Quality and continuous improvement
- Maintenance and diagnosis of industrial systems

At the end of a semester of courses in their responsible, the engineering student completes their training with a six-month End of Study Project (PFE) in industry

Course description (Course objective):

At the end of this module, the engineering student must be able to understand the importance

of a company and the importance of choosing a structure, which are strategic criteria to its economic development and the success of its projects. As future entrepreneur it is fundamental to identify the essential activities and functions of a business.

Prerequisites:	Keywords:
Bac+2; PowerPoint, excel	Company, structure, projects

Specific objectives of the course (OBJ):

OBJ 1: Identify the importance of managing companies

OBJ 2: Identify different functions of companies

OBJ 3: Identify the main structures of companies

Necessary material:	
NONE	

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-3	Chapter I: Role of the general management	4.5 hours	role of the general management overseeing day to day operations

EP Educational Group

Industrial ENGINEERING

4-6	Chapter II: Main functions of companies	4.5 hours	Identify the different departments of companies
7-9	Chapter III: Factors influencing companies structuring	4.5 hours	Identify different factors contributing to the choice of a company's structure
10-12	Chapter IV: Courseic organizational structures	4.5 hours	Identify the three main organizational structures (functional, divisional, matrix)
13-14	Study of practical cases	3 hours	Evaluate student's level of learning with practical cases

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals
13-14	Mini-project support,	3h	Summative evaluation

4- Evaluation methods & Marks Distribution

Type of assessment	Type of assessment Yes No		Tx Weighting
CC - Continuous assessment (Test/Quiz, Presentation, Report, etc.)	□ Yes	x No	
DS - Supervised Duty	x Yes	□ No	40%
EE - Written test (Final exam)	x Yes	□ No	60%
EP - Practical test (TP- TP exam / MP- Mini project)	☐ Yes	□ No	

Material 100% TP : Average = 20% CC + 80% EP
 100% CI material : Average = 40% DS + 60% EE

• CI+TP material : Average = 20% DS + 20% EP + 60% EE

5- Evaluation criteria

Authorized documents : X No

• Authorized search engine : \square Yes X No

• Criterion 1: Clarity of ideas (5 points)

- Criterion 2: methodological approach (5 points)
- Criterion 3: innovation (5 points)
- Criterion 4: presentation and mastery (5 points)

Course	Industrial Engineering					Volume. H. (CI)	21h
Responsi ble	7ied Garhoui				Volume. H. (TP)		
Module	Mathematics for engineers				Version	09/2023	

Course description (Course objective):

This course allows students to gain advanced knowledge of mathematics and develop skills to solve engineering problems using mathematical techniques.

Prerequisites:	Keywords:
	-Functions with a real variable (limit and continuity).
L1 and L2 mathematics courses	- Derivation and primitive.
Mathematical tools at a BAC+2 level	- Integral calculation.
	-Differential equations.

Specific objectives of the course (OBJ i):

At the end of this course, students will:

OBJ 1: Be able to calculate Fourier transforms of non-periodic functions.

OBJ 2: Understand the notion of the convolution product.

OBJ 3: Understand the concepts of Laplace transforms and inverse Laplace transforms.

Be able to solve a differential equation using Laplace transforms.

OBJ 4: Know how to decompose a periodic signal into a Fourier sum.

Necessary material:		

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	Chapter 1: Laplace Transformation - General - Properties - Convolution	3h	Introduction to the Laplace transform and its use to solve linear Ordinary Differential Equations (ODE) of order n
3-4	-Practical methods for calculating the image and an original -Application: Use the Laplace transform to solve a differential equation	3h	
5-6	TD-Series 1	3h	
7-8	-General -Terms	3h	In this chapter, to simplify, we will introduce the notion of
9-10	-Properties -Convolution	3h	Fourier transform on R rather than on R^d. This short chapter is an interesting application of the previous integration course, in the sense that many results are used (dominated
11-12	- Inversion - Plancherel and Parseva formulas	3h	convergence theorem, continuity and differentiability theorems for parameter integrals, convolution product, density of step functions in L 1).
	TD=Series 2		

	Detailed series of exercises throughout the		
13-14	course	3h	Evaluate the overall level of students and rectify gaps

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals

Module	Numerical analysis				Version	09/2023	

Course description (Course objective):

This course allows students to gain advanced knowledge of mathematics and develop skills to solve engineering problems using mathematical techniques.

Prerequisites:	Keywords:
L1 and L2 mathematics courses Mathematical tools at a BAC+2 level	- Dies -Determinant of a matrix -Functions with a real variable

Specific objectives of the course (OBJ):

Upon completion of this module, the student will be able to:

OBJ 1: Numerically solve a system of linear equations.

OBJ 2: Solve nonlinear equations numerically.

Necessary material:	
NONE	

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-3	Chapter 1: Solving a system of linear equations using direct and iterative methods -Introduction: * Definition of a system of equations. * Existence and uniqueness of the solution. * Resolution by the Cramer method	4.5	At the end of this chapter, the student will be able to: 1-Show the existence and uniqueness of a solution of a system of linear equations.
4-6	The exact methods: * Gauss's pivot * LU decomposition * Comparison of the two methods (calculation cost).	4.5	Apply LU decomposition to decompose a matrix. 3-Describe and Apply the Gauss and LU method to solve a system of linear equations.
7-9	- Iterative Methods: * General principle * Jacobi's method: * The Gauss-Seidel method * Comparison of the two methods	4.5	4-Describe and apply the Jacobi and Gauss-Seidel method to solve a system of linear equations. 5-Cite the convergence conditions of the Jacobi and Gauss-Seidel methods

10-12	Chapter 2: Solving non-linear equations -Application examples -Existence and uniqueness -The dichotomy method: *Definition *The dichotomy algorithm *Estimated number of iterations *Order of convergence *Application -	4.5h	At the end of this chapter, the student will be able to: 1-Define the Dichotomy method. 2-Calculate the number of iterations necessary to solve a non-linear equation by the dichotomy method with a given precision.
13-14	**Newton's Method: *Definition *Convergence condition (Choice of x_0) * Newton's algorithm *Order of convergence *Application - Comparison between the two methods.	3h	3-Define Newton's method. 4-Define the convergence conditions of Newton's method. 5-Discuss the choice of the initial solution of Newton's method. 6-Compare the Dichotomy method and Newton's method

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals

4- Evaluation methods & Marks Distribution

Race Title	ECONOMICS F	OR INDUSTRIAL EN	IGINEE	R		Version	09/2023

Race Description (Race Objectives):

"Economics for Industrial Engineer" has field that focuses we tea efficient allocation of limited resources in the management of businesses and firms. This course aims to familiarize students with the fundamental principles of microeconomics that are most relevant to managers. It emphasizes the analysis of market structures, the economic behavior of firms and other economic agents. Additionally, it integrates global business issues and practices, delivering to students the required knowledge necessary to allocate scarce resources and develop competitive strategies in dynamic business environment.

Furthermore, "Economics for Industrial Engineer" course serves as a foundation for further studies in industrial management, production management, finance optimization, and marketing. Its objective is to enhance students' ability to analyze economic environments, deal with economic behavior, understand the benefits and costs associated with business activities, and recognize the constraints that firms encounter in different economic scenarios such ace market and competitiveness. By doing so, students will be capable to make

optimal choices to fulfill managerial objectives under given economic situations.

PRE-REQUISITES/CO-REQUISITES:	Key issues:		
	Market Equilibrium; Firm Objectives; Optimization		
- Mathematics (Basic Algebra)	Methods; Request and Supply Theory; Theory of		
- Basic Statistics	Production; Cost Theory and Analysis; Pricing Model;		
- Logistics Management (Production)	Profits Maximization; Market Structures; Game		
	Theory; Pricing in Practice; Competitiveness and		
	Competitive (Non-competitive) Markets		

KEY LEARNING OBJECTIVES (OUTCOMES) (OBJ:

By tea end of tea module students will possess tea ability and knowledge to:

- **OBJ 1:** Elucidate the role of market mechanisms and comprehensively analyze the interchange between economic agents, while quantitatively examining the determination of market equilibrium (price and quantity)
- **OBJ 2:** Breakdown the decision-making process of a firm with limited budget when selecting goods and services to produce.
- **OBJ 3:** Understand the definition and measurement of production costs, while distinguishing between the economic concept of cost and its accounting counterpart.
- **OBJ 4:** Analysis in various market structures how the firm, regardless of their competitive positioning, quantify and determined tea profit-maximizing output in both the short and long run.
- **OBJ 5:** Quantify and analyze the level of risk associated with different choices, under competitive/non-competitive market.
- **OBJ 6:** Use advanced pricing model to maximize profits for firms.
- **OBJ 7:** Apply "game theory" to understand the evolution and operation of markets, as well as a guide managers in making strategic decisions in year ever-changing business landscape.

Required Logistics:

- Calculators
- M.S. Excel software
- Courseroom
- Whiteboard

Industrial Management

1. General

Coded	Ind 3 1 08	Level/Semester	1/51	Coefficient	3	Credits	4
Course	Course Industrial Engineering				Volume. H. (CI)	42	
Responsi ble	Yassine DALLEL			Volume. H. (TP)			
Module	Industrial Management				Version	09/2023	

Course description (Course objective):

Students learn to apply strategies and use management tools to improve the quality, productivity and efficiency of organizations, including production supply chain processes.

Prerequisites:	Keywords:
Logistics, industrial management	Purchasing, production, inventory management, quality, supply chain

Specific objectives of the course (OBJ):

- **OBJ 1:** Understand industrial management concepts
- OBJ 2: Understanding industrial management tools
- **OBJ 3:** Know and understand the current problems and challenges facing companies in terms of industrial management.
- **OBJ 4:** Analyze and evaluate an industrial organization through a set of necessary tools and propose improvements

Necessary material:	

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1	introductory chapter	3	Master the
			principles of

			industrial management
2-3	chapter 1: purchasing management: definitions, evolution and importance of the purchasing function	6	Understand the basic notions of purchasing and the importance of the function in the company
4	purchasing strategies	3	Distinguish between different purchasing strategies
5-6	the purchasing cycle	6	Understand the different stages of the purchasing process
7-8	chapter 2: inventory management definitions and importance of stocks, functions of stock, concepts of minimum stock, safety stock and alert threshold	6	Understand the basics of inventory management
9	inventory costs	3	Master the different elements of inventory costs
10-11	chapter 3: production * definition and importance of production * the objectives of the production function *	6	Understand the basics of production
12	the notion of quality: definition, issues, non-quality, over- quality	3	Master the concept of quality and its importance
13-14	formulation in mathematical model	6	Write a production problem as a mathematical model

3- Content elements (Practical work)

Week(s)	Activities/Content Elements	No. HR	Goals
---------	-----------------------------	--------	-------

12	Practical exam, mini-project defense,	3h	Summative evaluation

4- Evaluation methods & Marks Distribution

Type of assessment	Yes	s No	Tx Weighting
CC - Continuous assessment (Test/Quiz, Presentation, Report, etc.)	⊠Yes	□ No	20%

SI in Automatic

1- Generalities

Code	Ind 3 1 09	Level/Semester	1/S1	Coefficient	3	Credits	3
Course	Industrial Engineering					Vol. H. (CI)	42
Responsi	Tarek GARNA					\/al H /TD\	
ble	TUTER GARNA	1	Vol. H. (TP)				
Module	Automatic industrial system					Version	09/2023

Course Description (Course Objective):

Construct the transfer function modeling the behavior of a controlled system, analyze the stability of a controlled system, precision and speed.

Prerequisites:	Keywords:
Basic notions of mathematics	Transfer function, Bode diagram, PID controller

Specific course objectives (SCO):

OBJ 5: Controlled systems: functional diagram (open loop, closed loop).

OBJ 6: Study the performances of controlled systems

OBJ 7: Summary of controlled systems: Correction, cascade controller, feedback controller, PID, phase advance controller and phase delay controller.

Equipment required:

Nothing to report

2- Content Elements (Course)

Weeks	Chapters/Content elements	Nbr. HR	Objectives
1-2	Generality on regulation and closed-loop control	6H	Principled conceptual Knowledge

EPIEducational Group

Industrial ENGINEERING

3-5	Temporal and frequency study of linear systems	9Н	Calculation and representation of time responses and frequency diagrams
6-8	Functional diagram and performances of controlled systems	9 H	Analysis of stability, precision and response time
9-12	Synthesis of analog controllers	12H	Analog controllers and Ziegler-Nichol's method
13-14	Practical case study	6 H	Analysis of stability

3- Content Elements (Practical work)

1. General

Coded	Ind 3 1 10	Level/ Semester	1/S1	Coefficient	3	Credits	3
Course	Industrial Engineering					Volume. H. (CI)	42
Responsi ble	Nadia CHAKROUN					Volume. H. (TP)	
Module	SI in Mechanics					Version	09/2023

Course description (Course objective):

Study movements as well as static balance in mechanisms.

Prerequisites:	Keywords:
Bac+2 level	Mechanical systems/ Modeling/ Parameterization/ Kinematic performances/ Static performances

Specific objectives of the course (OBJ):

OBJ: 01 Model and configure mechanical systems.

OBJ 02: Predict and verify the kinematic performance of mechanical systems.

OBJ 03: Model, predict and verify the static performance of mechanical systems.

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1	Chapter I/ Concept of the non-deformable solid-Notion of a mechanical connection between two solids-reference- solid equivalence	3	Configure an elementary connection

2-3	Chapter I/ Kinematic diagram-equivalence Coursees- closure of kinematic chains	6	-Establish the connection graph of a mechanism -Establish independent scalar relationships -Determine the degree of freedom of a mechanism -Determine the input- output law of a mechanism
4-5	Chapter II/Derivation of a moving vector with respect to a frame of reference-Velocity of a point which belongs to a solid with respect to another solid-Transfer of moments-Acceleration vector of a point with respect to a frame of reference	6	-Exploit vector derivation -Determine the velocity vector of a point of a solid relative to another solid -Determine the acceleration vector of a point of a solid relative to another solid
6	Chapter II/ Kinematic torque of a solid relative to another solid	3	-Determine the kinematic torso of a solid in motion relative to another solid
7	Chapter II/ Sliding speed vector between two solids in point contact - non-slip condition	3	-Determine the sliding speed vector at a point of contact of two moving solids
8-9	Chapter II/ Rolling rotation vector - Pivot rotation vector - plane problem	6	-Decompose the instantaneous rotation vector into a rolling rotation vector and a pivot rotation vector -Identify the type of movement

10-11	Chapter III/ Concentrated loads - Distributed loads - Static torques of perfect elementary connections	6	- Determine the torso representative of concentrated loads and distributed loads -Determine the torso of mechanical actions transmissible by a perfect elementary connection
12-14	Chapter III/ Interaction graph- Isolation of a subsystem- Concept of the external environment on the isolated system- Static unknowns	9	-Draw the mechanism interaction graph -Apply PFS to an isolated system -Determine static unknowns

Industrial logistics

1. General

Coded	Ind 3 1 11	Level/Semester	1 /S1	Coefficient	1.5	Credits	2
Course	Industrial Enginee	ering				Volume. H. (CI)	21
Responsi ble	Yassine DALLEL					Volume. H. (TP)	
Module	Industrial logistics					Version	09/2023

Course description (Course objective):

Its purpose is to move material flows, to transport them from places of production to places of transformation, then from places of transformation to places of consumption.

Prerequisites:	Keywords:
	- Warehouse
- Graphic Representation	- Logistics
	- InfNonetructure

Specific objectives of the course (OBJ):

OBJ 01: move flows of materials, services and resources from places of supply of primary resources to places of production or processing industries then to the places of distribution or consumption.

OBJ 02 To ensure the management of all physical flows of products, from suppliers to the final customer. compare the importance of technical functions versus their costs

OBJ 03: know the handling tools

OBJ 04: know the storage methods

OBJ 05: design storage areas and their sizing

Necessary material: - None

Week(s)	Chapters/Content Items	No. HR	Goals
1-3	Chapter 1: supply chain and basic concepts	4.5	 ✓ The material structure of the logistics system ✓ Mission of the logistics system ✓ Logistics InfNonetructure
4-6	Chapter 2: warehousing	4.5	 ✓ The storage functions ✓ Roles of the warehousing function. ✓ The place of the warehousing function in the company. ✓ Technologies and storage methods
7-10	Chapter 3: Handling equipment	6	✓ Handling equipment✓ compare between handling equipment
11-14	Chapter 4: Storage areas and their dimensions	6	 ✓ Defining warehouse areas ✓ Sizing the reception area ✓ Sizing of the storage area ✓ Sizing the order preparation area ✓ Sizing the shipping area

3- Content elements (Practical work)

Course	Industrial Engineering					Volume. H. (CI)	21
Responsi	i Nidhal HNAIEN					Volume. H.	
ble		(TP)					
Module	Renewable ene	rgies				Version	10/2023

Course description (Course objective):

This renewable energy course mainly aims to provide students with detailed theoretical and practical knowledge of the different sources of renewable energy, as well as their industrial mechanisms and the sizing of its installations.

Prerequisites:	Keywords:
Heat transfer / Fluid mechanics	Solar flow, renewable energies, photovoltaic panel, solar thermal, solar water heater.

Specific objectives of the course (OBJ i):

- **OBJ 1:** Being able to choose and size a solar thermal installation (intended for the production of domestic hot water)
- **OBJ 2:** Being able to choose and size a photovoltaic solar installation (intended for electricity production)
- **OBJ 3:** Study the different operating parameters of wind energy.

Necessary material:	
No hardware needed	

Week(s)	Chapters/Content Items	No. HR	Goals
---------	------------------------	--------	-------

1-2	Chapter 1: Origin, capture and uses of solar energy.	3 hours	-Astronomical reminder and origin of solar energy -Solar flux calculation steps
3-4	TD Chapter 1: Origin, capture and uses of solar energy. Chapter 2: Thermal conversion at low temperature.	3 hours	- Calculation of solar flux - Different types of solar water heaters
5-6	Chapter 2: Thermal conversion at low temperature. TD Chapter 2: Thermal conversion at low temperature.	3 hours	-Sizing step of a solar water heater -Practical case study
7-8	Chapter 3: Photovoltaic conversion.	3 hours	-Know the photovoltaic effect
9-10	TD Chapter 3: Photovoltaic conversion.	3 hours	Components of a photovoltaic installation
11-12	Chapter 4: Wind energy.	3 hours	-Know the different components of a wind turbine
13-14	Practical case study	3 hours

Design of industrial systems

1. General

Coded	Ind 3 2 04	Level/Semester	1/52	Coefficient	3	Credits	4
Course	Industrial ENGINE	Volume. H. (CI)	42				
Responsi ble	Yassine DALLEL					Volume. H. (TP)	0
Module	Design of industrial systems					Version	09/2023

Course description (Course objective):

introduce students to the different tools necessary to:

- •describe a production system, its process, its organization,
- •the design of a product and/or service,
- •the design of the manufacturing process: workshop design, interactions between workstations, task assignment, etc.
- understand the methods of piloting and supervising production systems

Prerequisites:	Keywords:
Industrial Management	Production process, design, products, services

Specific objectives of the course (OBJ):

- **OBJ 1:** Select and develop products and/or services
- **OBJ 2:** Study workstations, layouts or handling and storage methods for industrial and service activities, and characterize them in economic terms (standard time, capacity, throughput, etc.) and in ergonomic terms
- **OBJ 3:** Evaluate and quantify manufacturing costs and times (standard times and production methods)
- OBJ 4: Measure performance, measure results obtained, resolve problems
- OBJ 5: Diagnose the efficiency of workstations, identify bottleneck positions and define action plans

Necessary material:	

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	Chapter 1: General introduction: Recent developments: environmental, technological, social, \land\text{Industry 4.0}	6	Understand the general context
3-4	Chapter 2: Design of Products and Services: Product selection, Product development: Characteristics of industrial products: physical/service, standard/specific products, modular/non-modular, simple/complex,	6	describe a production system, its process, its organization,
5-6	Tree nomenclature and purchasing nomenclature, Analysis using the Pareto principle, Production documentation: drawing and assembly diagram, monitoring sheet, etc. The specificities of service activities: Innovation and design of new products: strategy, typology, approach, tools TD1: Management of Nomenclatures,		Master the notion of nomenclature and the notion of innovation
7-8	Chapter 3: Design of Production Processes: Basic notions, Typology of processes according to the nature of production: for stock, to order, with limited anticipation, Typology of processes according to the organization of means of production: Unit series production (in a fixed position), workshops specialized by technology (Job Shop), production lines (Flow Shop), grouping into islands (or cells): implementation process (example)	6	Distinguish the different typologies of production processes
9-10	Chapter 4: Capacity management: Capacity: definitions, units, types, theoretical/effective capacity, Balance between load and capacity: Concept of standard times, pace judgment, etc. Measurement of times: timing, time method predetermined "Motion Time Measurement" (MTM), etc. Action plan in case of imbalance between load and capacity TD2: Capacity Management	6	Understand the concepts of charge, capacity, balance between charge and capacity
11-12	Capacity planning: overall production plan, master production plan, calculation of needs, consider several	6	Mastering the PDP

	possible scenarios to evaluate in order to choose a better solution that minimizes costs TD3: Production Master Plan (PDP)		
13-14	Balancing of production chains: approach, sequence of operations graph, throughput, cadence, calculation of workforce and resources, priority of tasks, criterion for assignment of tasks, etc. TD4: Production Plan and Capacity Management TD5: Balancing production chains	6	Perform balancing of a production line

3- Content elements (Practical work)

Value Analysis

1. General

Coded	Ind 3 2 05	Level/Semester	1/S2	Coefficient	1.5	Credits	3
Course	Industrial Engineering					Volume. H. (CI)	21
Responsi ble	Rihem BEN NJIMA					Volume. H. (TP)	
Module	Value analysis					Version	09/2023

Course description (Course objective):

- Value analysis is a set of techniques, knowledge and skills used to improve the value of a product by eliminating unnecessary costs or improving its functions without compromising its quality, reliability and performance.
- Value analysis (VA) is a method of optimizing the design of products, services and organizations, which makes it possible to mobilize the required skills in a structured approach. Its specificity lies in the implementation of "value" reasoning, which aims to increase utility and/or reduce costs for its stakeholders, throughout the life cycle.

Prerequisites:	Keywords:
- histogram	- FAST diagram
- PARETO method	- Octopus diagram
- Graphic Representation	- horned beast tool

Specific objectives of the course (OBJ):

OBJ 1: Know how to analyze the need

OBJ 2: Develop a functional analysis of a product

OBJ 3: Knowing how to promote a product

OBJ 4: compare the importance of technical functions versus their costs

OBJ 5: Functional breakdown of the product

Necessary material:	
- O	

Week(s)	Chapters/Content Items	No	Goals
		HR	
1- 2	Chapter 1: Analyze the need	3	✓ sixteen the need✓ analyze the need✓ validate the need
3-5	Chapter 2: Study the feasibility	4.5	 ✓ inventory the environment ✓ identify service functions ✓ characterize service functions ✓ Hierarchize service functions ✓ Write the functional specifications
6-8	Chapter 3: Analyze the existing	4.5	 ✓ encrypt service functions ✓ analyze service function values ✓ distinguish what is necessary from service functions
9-12	Chapter 4: Research and evaluate solutions	6	 ✓ search for as many solutions as possible ✓ select solutions ✓ Study the solution ✓ carry out the technical- economic evaluation ✓ Perform the critical design review
13-14	Practical case study	3	✓ Study the feasibility

3- Content elements (Practical work)

Week(s)	Activities/Content Elements	No HR	Goals

Databases

1- Generalities

Code	Ind 3 2 07	Level/Semester	1/S2	Coefficient	3	Credits	3
course	Industrial Enginee	ring				Vol. H. (CI)	21
Responsi ble	Dorra DHAW					Vol. H. (PW)	21
Module	Databases					Version	09/2023

Course Description (Course Objective):

The Database course provides a comprehensive exploration of theoretical and practical principles related to information management. Covered topics include data modeling using the entity-relationship model, normalization to ensure data integrity, and the use of SQL language to interact with relational databases.

At the end of this course, the student should master the fundamental concepts related to the management of relational databases, including design/conception, creation, manipulation, and querying of the database.

Prerequisites:	Keywords:
Basic computer concepts : Understand the fundamental concepts of computer science, such as variables, data types, control structures (loops, conditions), functions, etc.	

Specific course objectives (OBJ):

OBJ 1: Understand the set of concepts underlying databases.

OBJ 2: Deepen the concepts of modeling, design, and implementation of databases.

OBJ 3: Design a database while adhering to the rules and standards of data models: Conceptual Data Model (CDM) / Entity-Relationship Model (ER).

OBJ 4: Convert a conceptual schema into a coherent (relational) logical schema (LDM).

OBJ 5: Apply relational algebra operations to query a database.

OBJ 6 : Study the structured query language SQL with its different categories: Data Definition Language (DDL), Data Manipulation Language (DML), and Data Query Language (DQL).

Required Equipment:

- Computer or Laptop
- Internet Connection

- Database Management Systems (DBMS) such as Access, MySQL, PostgreSQL, Microsoft SQL Server, Oracle, etc.

2- The content elements: (course)

Week(s)	Chapters / Content elements	Nbr. HR	Intended objectives
1	<u>Chapter 1:</u> General Presentation: Deficiencies of the Courseical approach, Database history, Database environment, Standard architecture of a database	1h30	- Understanding the advantages of using databases
2-3	<u>Chapter 2</u> : Entity/Association Model: Entities, attributes, and identifiers, Types of entities, Binary associations, Weak entities, generalized associations, Rules for the proper formation of an E-A model, Application exercises	3h	- Mastering the concepts of entities, attributes, and identifiers Understanding the types of entities and binary associations Applying the rules for the proper formation of an E-A model through exercises.
4-5	Chapter 3: Relational Model: Definition, Concepts of the Relational Model, Transition from the E/A Model to the Relational Model (Types of entities, One-to-many associations, Associations with weak entity type, many-to-many binary associations, Ternary associations, Revisiting the choice of identifiers), Application exercises	3h	- To know how to transition from the Entity-Relationship (E/A) model to the relational model.
6	<u>Chapter 4</u> : Functional Dependencies and Normalization: Update anomalies (Insertion, Modification, and Deletion), Goals of normalization, Functional dependencies, Normalization (First Normal Form, Second Normal Form, Third Normal Form), Application exercises	1h30	 Identify update anomalies. Master functional dependencies. Apply normalization. up to the Third Normal Form.
7-9	<u>Chapter 5</u> : Relational Algebra: Introduction, Presentation of an example database, Operators of relational algebra (Selection, denoted σ ; Projection, denoted π ; Renaming, denoted α ; Cartesian product, denoted \times ; Union, U ; Difference, $-$; Division /; Join), Application exercises	4h30	- Use and apply relational algebra operators on a sample database.

10 - 12	<u>Chapter 6</u> : SQL Language: Introduction, Data Definition Language (DDL) (CREATE, DROP, ALTER), Data Manipulation Language (DML) (INSERT, UPDATE, DELETE), Data Query Language (DQL) (SELECT, SELECT with WHERE clauses, GROUP BY, HAVING, ORDER BY), Aggregation functions, Joins (inner, outer, cross).	4h30	- Create a database with tables. - Know how to manipulate data in the created database. - Write correct SQL queries.
13 - 14	Application exercises	3h	- Create a database with tables Know how to manipulate data in the created database Write correct SQL queries.

3- The content elements: (Practical Work)

Week(s)	Chapters / Content elements	Nbr. HR	Intended objectives
1	Introduction to Database Management System (DBMS)	1h30	- Become familiar with the chosen Database Management System (DBMS).
2 - 5	- Data Definition Language (DDL) (CREATE DATABASE, CREATE TABLE, DROP DATABASE, DROP TABLE, ALTER TABLE with clauses ADD, MODIFY, RENAME, DROP, Addition, modification, and deletion of constraints (CONSTRAINT)) - Data Manipulation Language (DML) (INSERT, UPDATE, DELETE)	6h	- Use Data Definition Language (DDL) commands to create, modify, and delete databases and tables. - Apply Data Manipulation Language (DML) commands to manipulate data within tables.
6-7	- Data Query Language (DQL) (SELECT simple, SELECT with WHERE clause)	3h	- Understand DataQuery Language (LID).- Use SELECT to retrieve data (simple)

			select and with WHERE conditions).
8-10	- Data Query Language (DQL) (SELECT with WERE, GROUP BY, HAVING, ORDER BY using aggregation functions (MAX, MIN, AVG, SUM, COUNT))	4.5h	 Master the use of GROUP BY, HAVING, ORDER BY clauses. Utilize aggregation functions to analyze data in a grouped manner.
11-12	- Joins (inner, outer, cross): SELECT with clauses JOIN ON, JOIN USING, NATURAL JOIN, INNER JOIN ON, LEFT JOIN, RIGHT JOIN, FULL JOIN, CROSS JOIN	3h	 - Understand the different types of joins. - Use JOIN clauses to retrieve data from multiple tables.
13-14	Practical Exam	3h	Evaluation

3- Evaluation methods & Marks Distribution

Evaluation Type	Yes	s/No	Weight Ratio
CA - Continuous Assessment (Test/Quiz, Presentation, Report,)	□Yes	⊠No	
SA - Supervised Assignment	⊠ Yes	□No	20%
WE - Written Exam (Final Exam)	⊠ Yes	□No	60%
PA- Practical Exam (Lab Exam / Mini Project)	⊠Yes	□No	20%

- Subject 100% Lab: Average = 20% CA + 80% PE
- Subject 100% Theory: Average = 40% SA + 60% WE
- Subject Theory + Lab: Average = 20% SA + 20% PE + 60% WE

4- Evaluation Criteria

- Allowed Documents: ☐ Yes ☒ No
- Allowed Search Engine: ☐ Yes ☒No
- Criterion 1: Relevance of Content (5 points)
- Criterion 2: Application of Knowledge (5 points)
- Criterion 3: Quality of Modeling/Design (5 points)
- Criterion 4: **Query Efficiency** (5 points)

Materials sciences

1. General

Coded	Ind 3 2 09	Level/Semester	1/S2	Coefficient	3	Credits	3
Course	Industrial Enginee	ring				Volume. H. (CI)	21
Responsi ble	Nadia CHAKROUN	1				Volume. H. (TP)	21
Module	Materials science	es				Version	11/2023

Course description (Course objective):

The manufacture of an object requires reflection on the function it will have to fulfill, the material which will constitute it and the manufacturing process which will achieve the desired shape. Thus, the notion of material is inseparable from the interest that the substance chosen may represent with the aim of obtaining a finished object having a precise function.

Every engineer must have a minimum knowledge of the mechanical behavior of materials. In addition, the engineer is frequently called upon to consult documents dealing with related subjects such as, for example, rational approach to the choice of materials, cleanliness of materials and microstructure.

This course therefore has the main objective of familiarizing students with the field of materials, as well as providing them with in-depth knowledge of the properties of materials to better choose the right candidate according to the conditions of use.

Prerequisites:	Keywords:
Bac+2 level	Materials; shapes; processes

Specific objectives of the course (OBJ):

OBJ 1: Understand and know the standardized designation, properties and areas of application of metallic materials and the techniques for their development.

OBJ 2: Describe the equilibrium structures, based on phase diagrams, of binary alloys (ferrous and non-ferrous alloys).

OBJ 3: Understand treatments to improve the use and serviceability properties of metallic materials

Necessary material:	
Data show; handout	

Week(s) Chapters/Content Items		No	Goals
		HR	

	Chanter 1: Metallic materials: Decianation properties and		
12	Chapter 1: Metallic materials: Designation, properties and application - General Introduction - Properties - Material Courseification - Courseification of metals and designation - Ferrous metals (steel and cast iron) - Non-ferrous metals Chapter 2: Elaboration of metals - Introduction - Production of ferrous metals - Production of non-ferrous metals Tutorials	3	-Enter the standard designation, properties and areas of application of ferrous and nonferrous materials -Know the different processes for producing ferrous and non-ferrous metals.
3-4-5	Chapter 3: Balance diagram of binary alloys - Introduction - Law of phases (Gibbs) - Binary alloy consisting of two phases in equilibrium - Alloy to a single solid solution - Two-solid solution alloy with a eutectic point - L->S cooling curve of an alloy - Cooling curve of a solid-state alloy Chapter 4: Iron-Carbon Balance Diagram - Introduction - Iron Structure - Cementite balance diagram - Study of cooling of steels and cast irons Tutorials	4.5	-Analyze equilibrium diagrams of binary alloys -Analyze the Iron- carbon diagram
6-12	Chapter 5: Modification of mechanical properties - Introduction - Hardening by work hardening - Hardening by grain size refinement - Solid solution hardening - Structural hardening Chapter 6: Heat treatment of steels - Introduction - The main types of heat treatment I- Austenization of steels - Heating speed - Austenization temperature - Austenization duration - Grain size	10.5	-Know in general the different methods of improving mechanical properties -Know what heat treatment is autenization parameters anisothermal quenching process

	II- Isothermal transformations of steels		-Know the purpose,
	- Introduction		stages and different
	- The different types of austenite transformations		types of steel income
	- Reading TTT diagrams or Iso-austenitic curves		-Know the steps and
	- Industrial isothermal heat treatments of steels		different types of
	III- Anisothermal transformations of steels		steel annealing.
	- Introduction		-Understand the
	- Analysis of TRC diagrams		factors influencing
	- Residual austenite problem		the hardenability of
	- Critical quenching speed		steels as well as
	IV-Steel income		these determination
	- Introduction		methods
	- Different types of income		
	- Evolution of properties during income		
	V- Annealing of steels		
	- Introduction		
	- Different types of annealing		
	VI – Hardenability of steels		
	- Introduction		
	- Factor influencing hardenability		
	- Method for determining hardenability		
	Tutorials		
13-14	Chapter 7: Surface treatments		
	- Introduction	2	- Know the principle of
	- Mechanical treatment or work hardening	3	some types of
	- Quench hardening treatment after surface heating		superficial treatments
	- Thermochemical treatment		
	Tutorials		

3- Content elements (Practical work)

Thermal machines

1. General

Coded	Ind 3 2 10	Level/ Semester	1/S2	Coefficient	1.5	Credits	2
Course	Industrial Engineering				Volume. H. (CI)	21	
Responsi ble	Nidhal HNAIEN					Volume. H. (TP)	
Module	Thermal machines					Version	09/2023

Course description (Course objective):

These thermal machines course mainly aims to familiarize students with the fundamental principles, the different thermodynamic cycles and the various practical applications of thermal machines.

Prerequisites:	Keywords:
Thermal transfer / Mathematical tools	Thermodynamics, combustion engine, refrigeration machine, internal combustion, steam engine

Specific objectives of the course (OBJ):

- **OBJ 1:** Know how to analyze the different thermodynamic cycles: Students will be able to describe, interpret and optimize the cycles of heat engines and refrigeration cycles.
- **OBJ 2:** Design Thermal Systems: Students will be able to design thermal machine systems by exploiting theoretical knowledge.
- **OBJ 3:** Evaluate the profitability of installations by calculating the efficiency of heat engines and the efficiency of refrigeration machines

Necessary material:	
No hardware needed	

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	- Chapter 1: Reminders of thermodynamics + Tutorials	3 hours	-Reminder of the fundamental notions of thermodynamics
3-4	-Chapter 2: Reversible transformations + Directed work	3 hours	-Different types of thermodynamic transformations - Calculation of work and heat quantities
5-6	-Chapter 3: Introduction to the study of thermal machines + Tutorials	3 hours	-Trace Carnot cycles and calculate yield. - Calculation of the coefficient of performance (COP)
7-8	-Chapter 4: Cycles of internal combustion engines + Directed work	3 hours	-Know the operating principle of internal combustion engines - Differentiate between the cycle of a Gasoline and Diesel engine
9-12	-Continued Chapter 4: Cycles of internal combustion engines + Directed work	6 hours	-Trace the thermodynamic cycles of combustion engines and calculate efficiency
13-14	-Chapter 5: Refrigerating machines + Directed work	3 hours	-Know the refrigeration cycle -Identify the components of a refrigeration machine - Know the different types of refrigerants

PPE (supervised personal project)

1. General

Coded	Ind 3 2 10	Level/Semester	1/S02	Coefficient	3	Credits	3
Course	Industrial ENGINEERING			Volume. H. (CI)			
Responsibl e	educational manager			Volume. H. (TP)	42h		
Module	PPE (supervised personal project)			Version	09/2023		

Course description (Course objective):

- This project is an opportunity for the student to prepare themselves to know how to write a report, present their work, to highlight it and to improve their skills
- The PPE (supervised personal project) Presents a research project which can be proposed by the student or by the supervisor.
- PPE starts from the second semester and will end during the exam week of the second semester.
- Each student is expected to contact one of these teachers for supervision
- All 3rd year engineering students must be called to a meeting with their educational supervisors and the head of the internship service so that they are properly oriented respectively: Pedagogically and administratively.
- The PPE must be validated at the end of a defense which follows the submission of a report.
- The teacher (school tutor) helps the student to refine the end-of-year project. He provides educational support to the student (working methodology, definition of the problem or mission, establishment of the plan, writing of the report, etc.)

Prerequisites:	Keywords:

Specific objectives of the course (OBJ i):

OBJ 1: Solve a problem

OBJ 2: Write report

OBJ 3: Have a research mind
OBJ 4: Have a spirit of innovation

Necessary material:	

2- Content elements (Practical work)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2 Identifying the research topic 6	6	Determine a topic that interests you and has	
		academic or practical interest.	

			Clearly define the research questions in the
			project.
3-4	Development of a theoretical	6	Identify relevant theories, models or concepts
3-4	framework		that will serve as the basis for your research
5	Development of a methodology	3	Develop a detailed plan for collecting and
	Development of a methodology	3	analyzing the data needed for the research
6-7	Collection of data	6	Implement your data collection plan following
0-7	Collection of data	6	established procedures
	Data analysis	3	Interpret results and analyze data using statistical
8			techniques or qualitative analysis methods, as
			appropriate.
			Structure the research report by including an
9-10	Writing of the report	12	introduction, methodology, results and
			conclusions.
11-12	Review the report and provide		Revise report content to correct grammatical
11-12	perspective		errors and gaps.
12.14	Practical activity: presentation,	6	Summary of different projects and sharing of
13-14	discussions,	6	ideas

4- Evaluation methods & Marks Distribution

- ♦ The PPE (supervised personal project) must be validated at the end of a defense which follows the submission of a report.
- ♦ The student must submit a PPE report on time
- ♦ The evaluation is carried out by at least two members of the jury (Jury 1, jury 2)

Week(s)	Chapters/Content Items	No HR	Goals
1	General information on the processes for obtaining mechanical parts	01:30	General knowledge of the processes for obtaining mechanical parts

	SHOOTING		
2-3-4-5	 Describe the filming process. Describe the basic turning operations. Describe turning tools. Describe the main machining setups used in turning. Define cutting parameters while turning. Describe the main machines used in turning. Directed work. 	6:00 am	General knowledge of the turning process
6-7-8	 MILLING Describe the milling process. Describe basic milling operations. Describe milling tools. Describe the main machining fixtures used in milling. Define milling cutting parameters. Describe the main machines used in milling. Directed work. 	04:30	General knowledge of the milling process
9-10	 DRILLING Describe the Drilling, Reaming and Tapping process. Describe the basic operations of Drilling, Reaming and Tapping. Describe Drilling, Reaming and Tapping tools. Describe the main machining fixtures used in drilling. Set cutting parameters. Describe the main machines used. Directed work 	03:00	General knowledge of the drilling process
11-12	RECTIFICATION • Describe the rectification work process. • Describe the basic grinding operations. • Describe grinding tools.	03:00	General knowledge of the grinding process
13-14	RECTIFICATION • Set grinding cutting parameters. • Describe the main grinding machines used. Directed work	03:00	rectification process

3- Content elements (Practical work)

Week(s)	Activities/Content Elements	No HR	Goals
1-2	Knowledge of conventional machines in the mechanical workshop.	1h30	TP
3-4	This manipulation aims to familiarize the student with machining on a parallel lathe.	1h30	TP
5-6	This manipulation aims to familiarize the student with machining on a universal milling machine.	1h30	TP
7-8	This manipulation aims to familiarize the student with machining on a sensitive drill.	1h30	TP

9-10	This manipulation aims to familiarize the student with the welded assembly.	1h30	ТР
11-12	Practical exam, mini-project defense,	1h30	Summative evaluation

4- Evaluation methods & Marks Distribution

Type of assessment	Yes No	Tx Weighting

Operational research

1. General

Coded	Ind 4 1 05	Level/ Semester	2/\$3	Coefficient	3	Credits	3
Course	Industrial Engineering					Volume. H. (CI)	42
Responsi ble	Saima DHOUIB					Volume. H. (TP)	
Module	Operational research					Version	09/2023

Course description (Course objective):

At the end of this course, the student must be able to: Understand, Formulate, solve and analyze industrial engineering linear programming problems by graphical method, by simplex algorithm and Duality and sensitivity analysis for various real problems transport, allocation, production, investment, etc.

Prerequisites:	Keywords:
 Industrial engineering problems. Concept of algebra. Matrix form. Resolution of a system with 2 unknown variables. Graphic Representation 	 Industrial engineering problems Optimization _ Operational research Linear programming Simplex Algorithm Duality and sensitivity analysis Technical complementarity gap

Specific objectives of the course (OBJ):

OBJ 1: An ability to apply knowledge of mathematics, science, and engineering.

OBJ 2: An ability to function on multidisciplinary teams.

OBJ 3: An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

OBJ 4: Acquire a methodology for modeling an optimization problem.

- **OBJ 5:** Understand, Formulate, solve and analyze the linear programming problems by graphical method, by simplex algorithm, Solving LP problems with Excel or Solvexo software and Lindo software.
- **OBJ 6:** Analyze the duality and sensitivity and optimality of LP problems, study some LP Applications like; Marketing, Manufacturing, Employee scheduling, financial applications, Blending problems and Transportation applications. Solving LP problems with Excel or QM for Windows.

Necessary material:

- **Solvexo software** for graphics resolution.
- **Odoo software** for simplex resolution.
- **Lindo** software.

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	Chapter 1: formulation of industrial engineering linear programming problems.	6	- Understand industrial problems of transport, allocation, manufacturing, investment, etc build a system containing decision variables, objective function and constraints.
3-6	Chapter 2: Graphical resolution of linear programming	9	Solve linear programming problems graphically: ✓ Single optimal solution. ✓ Solution reject

	Chapter 3: Simplex algorithm resolution of linear	9	towards infinity. ✓ Solution not possible. ✓ Multiple solutions. Solve linear programming problems using a
7-10	programming		simplex algorithm: ✓ Single optimal solution. ✓ Solution reject towards infinity. ✓ Solution not possible. ✓ Multiple solutions.
11-12	Chapter 4: Duality	3	Formula of duality linear programming problems
13	Chapter 5: Sensitivity analysis	3	Sensitivity analysis of linear programming problems
14	Practical exam, mini-project defense,	3h	Summative evaluation

Information system management

1. General

Coded	Ind 4 1 06	Level/Semester	2/S3	Coefficient	1.5	Credits	2
Course	Industrial Enginee	ering				Volume. H. (CI)	21
Responsi ble	' Yassine DALLEL				Volume. H. (TP)		
Module	Information system management					Version	09/2023

Course description (Course objective):

address aspects of planning, development, implementation and management of information systems within organizations

Prerequisites:	Keywords:
Industrial Management	Information system, decision making, competitiveness.

Specific objectives of the course (OBJ):

OBJ 1: Understand the strategic role of information systems in organizations.

OBJ 2: Understand the key concepts of information systems management.

OBJ 3: Master the techniques of planning, implementation and management of information systems.

OBJ 4: Study the impacts of information systems on business performance and competitiveness.

Necessary material:	

Week(s) Chapters/Content Items	No. HR	Goals
--------------------------------	--------	-------

1-2	Introduction to information systems: - Definitions and fundamental concepts History and evolution of IS	3	clarify theoretical concepts of IS provide a conceptual framework for understanding these systems
3-4	Optimization of the company's supply chain and IS	3	understand the relationship between supply chain and IS assimilate the advantages of implementing IS in the supply chain
5-6	MRP: material requirement planning	3	understand the concept of MRP and its advantages
7-8	DRP: Distribution Resource Planning	3	understand the concept of DRP and its advantages
9-10	APS: advanced planning system	3	understand the concept of APS and its advantages
11-12	SCE: supply chain execution	3	understand the concept of SCE and its advantages
13-14	ECR: efficient consumer response	3	understand the concept of ECR and its advantages

Coded	Ind 4 1 07	Level/Semester	2/S3	Coefficient	3	Credits	4
Course	Industrial Enginee	ring				Volume. H. (CI)	42
Responsi ble	Habib ABDENNEJI					Volume. H. (TP)	
Module	Production management				Version	09/2023	

Course description (Course objective):

This course aims to improve the knowledge and skills of industrial engineering engineers in the field of production organization and management. Participants will learn the fundamentals of production management, including planning, scheduling, controlling and improving manufacturing processes. They will also gain an in-depth understanding of the methods and tools used to optimize production efficiency and productivity.

Prerequisites:	Keywords:
Industrialization course,	Production management, Production scheduling, Planning, Scheduling

Specific objectives of the course (OBJ):

OBJ 1: Understand the basic principles of production management

OBJ 2: Master the methods of planning and scheduling manufacturing processes

OBJ 3: Learn to control and improve production performance

OBJ 4: Apply the concepts learned to real production cases

Necessary material:		

Week(s)	Chapters/Content Items	No HR	Goals
1-2	 Introduction to production management Basic concepts of production management Roles and responsibilities of the production manager 	6	Understand the basic principles of production management

3-4	 Principles of production optimization Quiz on basic concepts of production management Analysis of a production process and proposal for improvements Aggregated Planning Industrial and commercial plan Master Production Program Developing a production plan for a given scenario 	6	Master global planning methods	
5-6-	 Detailed Planning Calculation of Net Needs (MRP0) Capacity study and production regulation (MRP1) 	6	Master manufacturing process planning methods	
7-8	 Production Management Scheduling technique in functional workshop. Task Scheduling Techniques 	6	Master the methods of scheduling	
9-10	 Pulled Stream Kamban system operation Kamban System Sizing TOP analysis and dynamic scheduling 	6	manufacturing processes	
11-12-13- 14	 Production control and improvement Measuring and monitoring production performance Continuous improvement methods (JIT) Management of production problems Analysis of production data and proposal of improvement solutions Case study 	12	Learn to control and improve production performance and apply the concepts learned to real cases.

Supply and inventory management

1. General

Coded	Ind 4 1 08 Level/Semester 2/S3 Coefficient 3					Credits	4
Course	Industrial Engineering					Volume. H. (CI)	42
Responsi ble	Saima DHOUIB					Volume. H. (TP)	
Module	Supply and inventory management					Version	09/2023

Course description (Course objective):

This course allows the student, on the one hand, to carry out operational tasks linked to the process of acquiring goods and services and inventory management, and, on the other hand, to participate in making decisions. decision related to supply chain management.

At the end of the course, the student should be able to: understand the fundamental concepts of supply chain management inventory management, define and explain of supply and inventory management, Represent the procurement process of purchasing process, to know their methods, calculate inventory levels and Costs related to inventory management, ...

Prerequisites:	Keywords:
	- Inventory management
	- inventory levels
- Inventory management	- Process inventory management
- Management	- Inventory management indicators
	- Physical inventory management
	- Costs related to inventory management

Specific objectives of the course (OBJ):

OBJ 1: Understating the fundamental concepts of supply and inventory management.

OBJ 2: Define, explain and represent process of supply and inventory management.

OBJ 3: Know their methods of inventory.

OBJ 4: Calculate inventory levels.

OBJ 5: Calculate costs related to inventory management.

Necessary material:		

Week(s)	Activities/Content Elements	No. HR	Goals
1-2	Chapter 1: concepts, definitions and missions of supply and inventory management	3	-Define and explain of supply and inventory managementRepresent the Procurement Process Purchasing process
3-4	Chapter 2: The inventory management methods	3	 Define and explain of Inventory management methods: know the two fundamental parameters of inventory management models: the date and the quantity ordered (order on a fixed or variable date, and on a fixed or variable quantity). know the 4 inventory management methods: ✓ replenishment or calendar method, we order a fixed quantity on a fixed date ✓ Point of order management method. variable date fixed quantity ✓ Replenishment method, fixed date variable quantity is ordered
5-6	Chapter 3: The Basics of Inventory Management	3	Define and explain of: ✓ Inventory management ✓ Inventory objectives and methods ✓ Advantages and disadvantages of an Inventory

pter 4: Inventory levels	3	define and calculate inventory levels ✓ Minimum Inventory ✓ Safety Inventory ✓ Alert Inventory ✓ Maximum Inventory
pter 4: Inventory levels	3	✓ Safety Inventory✓ Alert Inventory✓ Maximum Inventory
pter 4: Inventory levels	3	✓ Alert Inventory✓ Maximum Inventory
pter 4: Inventory levels	3	✓ Maximum Inventory
,	3	·
		/ Tool Inventor:
		✓ Tool Inventory
		✓ Average Inventory
		✓ Theoretical Inventory
		✓ Current Inventory
		✓ Virtual Inventory
pter 5: Physical inventory		explain of physical inventory management
management		✓ Shopping activities
		✓ The layout of storage areas
		✓ Reliability of data
		✓ Stock inventories
		✓ The cost of carrying inventory
Chapter 6: Costs related to		✓ The cost of launching or placing an
entory management	3	order
		✓ The acquisition cost
		✓ The cost of stock shortages
		(opportunity cost-loss of profit)
	2	physical inventory management and costs
	cal case study	cal case study

Maintenance management

1. General

Coded	Ind 4 1 09	Level/Semester	2/S3	Coefficient	3	Credits	4
Course	Industrial Engineering					Volume. H. (CI)	42
Responsi ble	Hichem HASSINE					Volume. H. (TP)	0
Module	Maintenance management				Version	09/2023	

Course description (Course objective):

This course aims to treat different notions and tools of maintenance management.

Prerequisites:	Keywords:
Production management	Maintenance- MTTR- MTBF- Pareto- FMEA- Cost

Specific objectives of the course (OBJ):

OBJ 1: Present the principles of maintenance process management

OBJ 2: Here different type of maintenance

OBJ 3: Failure analysis

OBJ 4: Maintenance Time and cost analysis

Necessary material:	

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	Chapter 1/ Maintenance: issues and strategies Maintenance history Maintenance definition Life cycle cost	06	-Presentation of the history of maintenance -Presentation of the utility of maintenance in society

	Mission maintenance		
	Chapter 2/ Maintenance methods		
	Failure concept		
	Chapter 2/ - Maintenance methods		-Details the different methods of maintenance
3-4	- Maintenance levels	06	-Help decide to choose the
	- Choice of maintenance strategy		adequate strategy of
			maintenance
	Chapter 3 / Failure analysis		-Present the 20-80 method and
	- Quantitative analysis		its application in maintenance
5-6	- 20-80 methods	06	-Presentation of correlation
	- Correlation method		method and its application in
	- Case studies		maintenance context
	Chapter 3 / -Qualitative analysis		December 1: 1: 1: 1: 1: 1: 1: 1: 1: 1: 1: 1: 1:
	-Cause effect method		Presentation of different qualitative methods used to
7.0		06	analyze failure in maintenance
7-8	-Ishikawa method	06	context
	-FMEA method		
	Case studies		
	Chapter 4 / Documentation on maintenance		
	- General documentation		
9-10	- Strategic documentation	06	-Presentation of different files
	- Technical file of equipment		used in maintenance process
	- Maintenance plan of equipment		
	- Historic file of equipment		
	Chapter 5 / Management of method service		
11-12	- Responsibilities	03	Presentation of cost analysis in
	- Analysis of maintenance times		maintenance
	Chapter 5 /Management of method service		
			Presentation of cost analysis in
13-14	Maintenance cost analysisPreparation of interventions	03	maintenance
	Case study

Electric machine

1. General

Coded	Ind 4 1 10	Level/Semester	2/S3	Coefficient	2.25	Credits	2
Course	Industrial Enginee	ineering				Volume. H. (CI)	21
Responsi ble	· Imen KORTAS			Volume. H. (TP)	10.5		
Module	Electric machine					Version	09/2023

Course description (Course objective):

- Acquire and know how to apply basic knowledge on single-phase and three-phase balanced systems.
- Acquire and know how to apply basic knowledge on single-phase and three-phase transformers.

Prerequisites:	Keywords:
Knowledge of some basic concepts about electrical	Single-phase regime, three-phase regime, balanced
networks.	system, transformer, power
networks.	system, a ansjormer, power

Specific objectives of the course (OBJ):

- 1. Have to amplify the electrical circuits in order to calculate the different energies.
- 2. Structuring the energy balance, through the control of the different powers developed by the electrical circuits.
- 3. Understand the operating principle of transformers.

Necessary material:

Single-phase power supply, Three-phase power supply, measuring devices, RLC loads, single-phase transformer

Week(s)	Chapters/Content Items	No	Goals
		HR	

1-2	Chapter 1: The single-phase diet: 1. Reminders on the description of sinusoidal quantities. 2. Single-phase power	3h	- Establish the single-phase energy balance	
3-4	3. reactivated energy compensation principle Tutorials	3h	 Physical interpretation of reactive power. Reinforce acquired knowledge 	
5 -6	Chapter 2: the three-phase regime 1. Characteristics of the electrical distribution network 2. Study of balanced three-phase systems.	3h	- Establish the three- phase energy balance	
7-8	3. Phase grouping modes. Tutorials	3h	 Establish the equivalent single- phase diagram Reinforce acquired knowledge 	
9-10	Chapter 3: single-phase transformer 1. Presentation of magnetic circuits.	3h	- Become familiar with magnetic quantities	
11-12	The perfect transformer. 3. The actual transformer.	3h	Kapp model of the transformer	
13-14	Tutorials	3h		

3- Content elements (Practical work)

Week(s)	Activities/Content Elements	No HR	Goals
			Highlight the
1-2	Single-phase power measurement (RLC load)	3h	compensation of
12	Single-phase power measurement (NEC load)	311	reactive energy in

Module	Innovation manag	Version	09/2023				

Course description (Course objective):

The innovation management course aims to provide students with a comprehensive understanding of concepts, strategies, and practices related to innovation management within an organization.

Prerequisites:	Keywords:

Specific objectives of the course (OBJ):

- **OBJ 1:** Understanding the Innovation Process: To provide students with a comprehensive understanding of the innovation process, from ideation to implementation. ...
- **OBJ 2:** Developing Creativity and Critical Thinking: Cultivating creativity and critical thinking skills to enable students to generate innovative ideas and solutions.
- **OBJ 3: Studying Innovation Models:** Exploring different innovation models, methodologies, and frameworks to help students choose the most suitable approach for various contexts.
- **OBJ 4:** Building Strategic Innovation Competencies: Focusing on developing strategic thinking and innovation competencies that align with organizational goals.
- **OBJ 5:** Measuring and Evaluating Innovation: Introducing metrics and evaluation criteria for measuring the success of innovation initiatives and assessing their impact on the organization.

Necessary material:	
/ideo projector	

Week(Chapters/Content Items	No	Goals
s)		HR	

1-2	Chapter1. Introduction to Innovation Management. Definition of innovation Types of innovation Innovation Life Cycle	6Н	-Understanding Key Concepts: Gain a fundamental understanding of essential concepts related to innovation management. - Identifying Innovation Drivers: Identify factors that stimulate and drive innovation within different industries and sectors.
3-4	Chapter 2. Models of the Innovation Process "Techno-Push" model "Demand – Pull" model "Hybrid" model "The fourth-generation innovation" model "The Kline and Rosenberg" Model "The fifth-generation innovation" model	9h	Understanding Different Models: Develop a clear understanding of various models that describe and explain the innovation process. Analyzing Sequential Models: Analyze sequential models that depict innovation as a step-by-step process, examining their strengths and limitations. Exploring Iterative Models: Explore iterative models that highlight the cyclical and dynamic nature of innovation, emphasizing continuous improvement. Understanding Open Innovation Models: Gain insights into open innovation models that emphasize collaboration, external partnerships, and idea sourcing from various channels.
5-6	1. Internet Monitoring 2. The 4 Types of Monitoring 3. Benchmarking 4. Purchasing Marketing 5. Techno Push Market Pull Hybridization 6. Blue Ocean Strategy	9Н	Understand the Concept of Monitoring: Gain a deep understanding of the concept of monitoring, its importance, and its role in the context of innovation. Explain Monitoring Methods: Examine and explain various methods and techniques for monitoring used to collect relevant information. Identify Information Sources: Learn to identify and leverage various information sources for monitoring, including internal and external sources. Study Monitoring Tools: Explore technology and software tools used to facilitate monitoring and information gathering. Analyze Trends: Develop the ability to analyze emerging trends in the field relevant to innovation. Understand Foresight: Understand the concept of foresight and its role in long-term strategic planning. Explain Foresight Methods: Examines different methods and approaches to foresight used to anticipate future developments.

			Study Possible Scenarios: Learn how to develop possible scenarios based on information gathered through monitoring and foresight. Apply Monitoring and Foresight to Innovation: Understand how to effectively integrate monitoring and foresight into the innovation process. Evaluate Impact on Strategy: Assess the impact of information gathered through monitoring and foresight on the organization's innovation strategy. Foster a Learning Culture: Promote an organizational culture that encourages continuous learning from the collected information. Develop Action Plans: Use monitoring and foresight information to develop concrete action plans aligned with innovation objectives.
			Understanding Design Thinking: Provides a thorough understanding of the fundamental principles of design thinking as a problem-solving approach.
			Design Thinking Process: Explain the different stages of the design thinking process, such as empathy, definition, ideation, prototyping, and testing, and detail how each of these stages contributes to the overall design.
7-8	 Chapter 4. Design thinking 1. Empathize 2. Define 3. Ideate 4. Prototype 	6Н	Development of Creative Skills: Foster the development of creative skills, including divergent thinking, convergent thinking, and the ability to think nonlinearly.
	5. Test		Collaboration and Communication: Encourages collaboration among team members, highlighting the importance of communication and multidisciplinary collaboration in the design process.
			User-Centered Approach: Emphasize the importance of a user-centered approach in designing products, services, or experiences by understanding the needs and experiences of end-users.

FD Educational

Industrial ENGINEERING

			Innovation Culture: Promote a culture of innovation within teams by illustrating how design thinking can foster creativity, adaptability, and proactive problemsolving.
9-10	Chapter 5. Innovation Leadership: the 4 Ps of innovation, innovation pipeline, the milestone, the feasibility study, the innovation wheel	6Н	Value Creation: Innovation should contribute to the creation of new sources of value for the company, whether through the development of new products, services, processes, or business models. Competitive Advantage: Companies often seek to innovate to differentiate themselves from their competitors. The goal is to create sustainable competitive advantages that position the company as a leader in the market. Adaptability and Agility: Innovation can also aim to make the company more adaptable to changes in the market, technology, and the business environment. Agility becomes a key skill to respond quickly to evolving situations. Process Optimization: Innovation is not always limited to products or services. It can also involve optimizing internal processes, reducing costs, and improving operational efficiency.
11-12	QUIZ and evaluation	3H	Summative evaluation
13-14	Case Study	3 H	Practical Application: Encourages students to apply design thinking concepts to real-world problems, emphasizing creative problem-solving.

Course description (Course objective):

Computer-assisted production management is an IT tool for managing all activities linked to the production of an industrial company; optimize all production processes by controlling various costs.

Prerequisites:	Keywords:
Production management	Technical data, PIC, PDP, Planning, Scheduling, Launch, Declaration, Production

Specific objectives of the course (OBJ):

OBJ 1: Optimize entire production processes, from resource planning to inventory management, to increase operational efficiency.

OBJ 2: Planning and anticipation of manufacturing orders for better production traceability.

OBJ 3: Calculation and determination of costs for an in-depth definition of load distribution.

Necessary material:

Computer Lab, CAPM Software (E- Prelude)

Week(s)	Chapters/Content Items	No HR	Goals

Course	Industrial Engineering			Volume. H. (CI)			
Responsi ble	Rihem BEN NJIMA				Volume. H. (TP)	42	
Module	GMAO				Version	10/2023	

Course description (Course objective):

A maintenance management computer system is a software package organized around a database making it possible to program and monitor under 3 aspects (technical, budgetary, organizational), all the activities of a maintenance service and the objects of this activity (services, workshop lines, machines, equipment, subassemblies, parts, etc.) from terminals located in technical offices, workshops, stores and supply offices.

Prerequisites:	Keywords:
- availability, maintainability, reliability indicator	 work order intervention voucher preventive maintenance operating range Inventory

Specific objectives of the course (OBJ):

OBJ 1: Reduce cost prices by reducing maintenance costs

OBJ 2: Teach students how to use Optimaint software

OBJ 3: reduction in maintenance costs (Allowing predictive management of maintenance

OBJ 4: Manage equipment fleets and spare parts (improve stock management)

OBJ 5: Facilitate the monitoring of maintenance activity and improve the management of maintenance documentation.

OBJ 6: Increase the quality of maintenance

OBJ 7: Extend the durability of equipment

OBJ 8: Facilitate the maintenance of complex systems

Necessary material:

- Optimaint software

Course	Industrial Enginee	ring				Volume. H. (CI)	42
Responsi ble	Hichem HASSINE			Volume. H. (TP)	0		
Module	Quality engineering			Version	09/2023		

Course description (Course objective):

This course aims to treat quality engineering in two complementary parts: quality management and statistical process control (SPC).

Prerequisites:	Keywords:
Production management- statistics	SPC- Control card- Quality management- ISO

Specific objectives of the course (OBJ):

OBJ 1: Present the principles of quality management

OBJ 2: Present the steps in implementing a quality management system according to ISO 9001

OBJ 3: Present and develop the different control cards

OBJ 4: Study of process capability and aptitude

OBJ 5: Study of the 6 sigma method and its implementation

Necessary material:				

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	Chapter 1/ Principles of quality management Introduction to certification body	06	-Presentation of the seven principles of quality management

			-Presentation of different definition related to certification -Presentation of the methodology of standards development
3-4	Chapter 1/ - Structure of ISO 9001 standard - Requirements of ISO 9001 standard	06	Details the requirements of ISO 9001 standard
5-6	Chapter 1/ - Solutions for implementing a quality management system - Case Study	06	-Develop a practical solution for each requirement -Drafting of complete version of a quality management system referring to ISO 9001 standard
7-8	Chapter 2/-Statistical process control -Control cards for measurement -Control cards by attribute -Process capability Case studies	06	Presentation of different types of control card
9-10	Chapter 3/ Six sigma methodology - Presentation of the method - Process variability Define and measure steps	06	- Details the six-sigma methodology -Presentation of different tools used in this methodology (SIPOC, CTQ, Kano)
11-12	Chapter 3/- Analysis, Innovate and control steps - Case study - Presentation of groups works	03	Presentation of different tools used in this methodology: FMEA
13-14	Chapter 3/- Analysis, Innovate and control steps - Case study Presentation of groups works	03	Used in this methodology (POKA YOKE, Standardization)

Module	Embedded computing (Python Programming)					Version	09/2023

Course Description (Course Objective):

The aim of this course is to acquire the necessary knowledge for programming with the Python language. Specifically, the goal is to gNonep the fundamentals of the language and have a comprehensive understanding of various modules and different simple and structured types such as tuples, lists, and dictionaries.

Prerequisites:	Keywords:

Specific Course Objectives (OBJ):

- 1. Master the fundamentals of the Python language.
- 2. Write Python scripts manipulating various non-mutable containers (strings and tuples) or mutable containers (dictionaries, lists, and sets).
- 3. Write functions and utilize predefined modules.
- 4. Manipulate files.

Coded	Ind 5 1 04	Level / Semester	3/\$5	Coefficient	1.5	Credits	3
Course Industrial Engineering					Volume. H. (CI)	21	
Responsi ble	Ines BELKACEM					Volume. H. (TP)	
Module	Module Supply Chain Management				Version	09/2023	

Course description (Course objective):

This course provides the basic tools for the SCM specialization in terms of strategy, industrial organization and decision-making using in-depth notions in the fields of operations research, operations management and economics.

Prerequisites:	Keywords:
Knowledge of the meaning of logistics, its scope and its approach.	
knowledge of the business world,	SCM, value chain, planning, network theory, information system
in-depth notions in the areas of operational research, operations management	

Specific objectives of the course (OBJ):

OBJ 1: Present a new reading of the notion of the logistics chain by referring to network theory.

OBJ 2: Explain the notion of SCM while emphasizing its fundamentals, facets and practices;

OBJ 3 : Given more importance to the connection between SCM and value creation. Given the 37 Practical SCM Tools

OBJ 4 : Discuss the issue of SCM planning by presenting the different types of SCM problems, as well as the basic decision support tools. Given the importance of sustainable SCM

Necessary material:

overhead projector and a computer

2- Content elements (Course)

Week(s)	Chapters/Content Items	No HR	Goals
1	SC radiography	ЗН	KNOW THE BASIC CONCEPT OF SCM
2-5_	the interdisciplinary nature of SCM	9Н	Distinguish between the different types of SCM
6-8	SCM practice in 37 tools	9Н	Explain the notion of SCM while emphasizing its fundamentals, facets and practices; Shown the 37 Practical SCM Tools and its importance
9-12	Sustainable SCM	ЗН	Discuss the issue of SCM planning by presenting the different types of SCM problems, as well as the basic decision support tools. Reveals the importance of sustainable SCM

Project management

1. General

Coded	Ind 5 1 05	Level/Semester	3/S5	Coefficient	3	Credits	3
Course	rse Industrial Fnaineerina					Volume. H. (CI)	42
Responsi ble	' Yassine DALLEL			Volume. H. (TP)	0		
Module	Project managem	ent				Version	09/2023

Course description (Course objective):

The project management course aims to provide students with an in-depth understanding of the principles, tools and techniques necessary for effective project management

Prerequisites:	Keywords:
Industrial management, information systems management	Project, planning, scheduling, CPM, PERT, GANTT

Specific objectives of the course (OBJ):

OBJ 1: Introduce the fundamental concepts of project management

OBJ 2: Familiarize students with the different methods, tools and techniques used for project management

OBJ 3: Understand how to allocate and manage resources (human, financial, material) effectively to optimize project results.

OBJ 4: Apply the knowledge acquired through real case studies or practical projects to enable a better understanding and integration of theoretical concepts.

Necessary material:	

Week(s) Chapters/Content Items	No. HR	Goals
--------------------------------	--------	-------

1-2	Introduction to project management:	6	Introduce the basic notions of project
12	- definitions and key concepts		management
-	- importance of project management		-
3-4	 Phases of the project life cycle: initiation: Development of specifications, identification of stakeholders and definition of objectives. planning: Establishment of the project plan, distribution of tasks, estimation of resources and deadlines. execution: Implementation of the plan, coordination of teams, management of resources. Monitoring and control: Monitoring progress, managing risks and making adjustments if necessary. Closure: Evaluation of results, writing of reports, lessons learned. 	6	Understand the different phases of the project life cycle
5-6	Project scheduling tools and techniques: - Gantt chart - CPM method	6	Master and apply the different project scheduling methods
7-8	PERT method	6	Master and apply the different project scheduling methods
9-10	Stakeholder management: Communication and relationships with the different parties involved in the project	6	Understand the importance of communication in a project
11-12	Risk management: identification, assessment and management of potential risks		Assimilate the project risk management approach
13-14	Application exercises	6	

3- Content elements (Practical work)

Week(s)	Activities/Content Elements	No. HR	Goals

Industry 4.0

1. General

Coded	Ind 5 1 06	Level/Semester	3/S5	Coefficient	1.5	Credits	3
Course	Industrial Engineering					Volume. H. (CI)	21
Responsi ble	Hamdi ABDELHADI				Volume. H. (TP)		
Module	Industry 4.0					Version	09/2023

Course description (Course objective):

In this course you will see a specialization overview, learn what Industry 4.0 is all about, learn about the enabling factors that made it, and become aware of what key skills to learn to be employed in the industry 4.0 market segment.

Prerequisites:	Keywords:
- Information system	
- The basics of production management	
- basic knowledge in electronics	
- basic knowledge in IT	

Specific objectives of the course (OBJ):

OBJ 1: Describe the key concepts of Industry 4.0

OBJ 2: List the core elements of i4.0

OBJ 3: Being Able to Apply i4.0 concepts to a manufacturing environment

Necessary material:

- **O**

Week(s)	Chapters/Content Items	No. HR	Goals
---------	------------------------	--------	-------

1-4	Chapter 1: Overview industry 4.0	8	 The Evolution of Industry from 1.0 to 4.0 Use cases: smart factory. Benefits of Adopting an Industry 4.0 Model Vertical and horizontal integration
5 -8	Chapter 2: CPS & IT tools	6	- Overview CPS - IIOT & CLOUD - MY - ERP - CRM
9-11	Chapter 3: Management 4.0	6	- Change Management for Industry 4.0
12-14	Chapter 4: Competence for Industry 4.0	6	- Lean 4.0 - Worker 4.0

Course	e Industrial Engineering					Volume. H. (CI)	
Responsi ble	Rihem BEN NJIMA					Volume. H. (TP)	42
Module	ERP Odoo				Version	09/2023	

Course description (Course objective):

The objective of this part is the creation of a database of an industrial company with the ODOO software. To do this, you must first create a company, the different products and services offered, the customers and the suppliers.

Prerequisites:	Keywords:		
- availability, maintainability, reliability indicator	 work order intervention voucher preventive maintenance operating range stock 		

Specific objectives of the course (OBJ):

- **OBJ 1:** create a company's database, the different products and services offered, customers and suppliers.
- **OBJ 2:** define the company's stock management rules and supply rules reduction in maintenance costs (Allowing predictive management of maintenance)
- **OBJ 3:** capture, process and analyze information relating to customers and prospects, with the aim of retaining them by offering them the best service.
- **OBJ 4:** manage personnel and bring together all the practices implemented to administer, recruit and develop human resources in an organization.

Necessary material:

- Odoo Software

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals

Simulation of production systems

1. General

Coded	Ind 5 1 08	Level/Semester	3/S5	Coefficient	3	Credits	3
Course	Industrial Engi	neering				Volume. H. (CI)	21
Responsi ble	i l Faouzi MASMOUDI			Volume. H. (TP)	21		
Module	Simulation of production systems			Version	10/2023		

Course description (Course objective):
...

Prerequisites:	Keywords:
Design and operation methods for production and service systems. Statistical	TRS; job shop, flow shop; inventory management; scheduling; Flow time;
manufacturing tools and performance indicators	Waiting; delay; Statistical laws.

Specific objectives of the course (OBJ):

OBJ 1: Define and calculate performance indicators for production systems

OBJ 2: Manual simulation of simple systems based on random numbers

OBJ 3: Master the modeling and simulation of industrial systems via ARENA software

Necessary material:

Computers and "ARENA" simulation software

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	Value stream mapping Definition of simulation and knowing when to simulate Reminder of performance indicator calculations	6	Know how to model and trace the flow of an industrial system

3-4	Advantages and limitations of simulation and examples of manual simulation - Dynamics of buffer stocks - Blocking and starvation of machines - Production rate vs availability	6	Have manual simulation skills with deterministic times and calculation of performance indicators
5-6	Definition and generation of random numbers Modeling and simulation project based on random numbers	6	Know how to use random numbers to manually simulate stochastic cases
7	Notions on Queuing Theory Presentations by students for simple cases	3	Bibliographic research and present practical cases

3- Content elements (Practical work)

Week(s)	Activities/Content Elements	No. HR	Goals
8-9	Modeling and simulation of a simple and more complex queue with deterministic times on ARENA	6	Deterministic examples to be able to compare the results found
10-11	Modeling and simulation of a simple queue with probabilistic laws on ARENA	6	Multiple resource examples with variable flows and decision making
12-13	Modeling and simulation of a multi-stage queue and decision making with probabilistic laws on ARENA	6	Multi- resource examples with decision making and discussion of results
14	Modeling and simulation projects for evaluation of acquired knowledge	3	Face-to-face and remote projects and discussion of results

4- Evaluation methods & Marks Distribution

Type of assessment	Yes	No	Tx Weighting
CC - Continuous assessment (Test/Quiz, Presentation, Report, etc.)	□Yes	□ No	20%

Reliability and operational safety

1. General

Coded	Ind -MDSI 5 1 10	Level/Semester	<i>3/</i> \$5	Coefficient	3	Credits	3
Course	Industrial Enginee	ring				Volume. H. (CI)	42
Responsi ble	Hichem HASSINE				Volume. H. (TP)	0	
Module	Reliability and ope	erational safety				Version	09/2023

Course description (Course objective):

This course aims to treat different tools related to reliability analysis and operational safety

Prerequisites:	Keywords:
Maintenance management	Reliability- Weibull - Kelly- FMEA- operational safety

Specific objectives of the course (OBJ):

OBJ 1: Present the different reliability laws

OBJ 2: Study of optimization strategy based on "r, 6" method

OBJ 3: Presentation of different tools to ensure operational safety

Necessary material:	

Week(s)	Chapters/Content Items	No. HR	Goals
1	Chapter 1/ concept of reliability, maintainability and availability - Reliability concept - Maintainability concept - Availability concept	03	-Presentation of the three notions of: reliability, maintainability and availability -Presentation of indicators related to these three concepts

	I		1
2-3	Chapter 2/ Reliability of systems -Approach to reliability through probabilities - Mathematical expressions - Expressions of the laws of reliability -Composition laws in reliability: equipment associations	06	Presentation of reliability laws and association strategies
4-5	- Application Chapter 3/ Reliability laws - Analysis of reliability using the exponential law - Analysis of reliability using Weibull's law	06	-Presentation of methods and laws used to analyze reliability
6-7	 Application Chapter 4/ Optimization of a systematic intervention period Optimization with Kelly method Rate of Occurrence of Failure Nelson – Aalen method Applications 	06	-Presentation of different methods to optimize systematic intervention period
8-9	Chapter 5/ Operational safety -Concept of operational safety -FMEA method	06	Presentation of operational safety concept and introduction to the FEMA method
10-11	Chapter 5/ - Fault tree method - Reliability Diagrams	06	-Presentation of fault tree method in order to aid in diagnosis
12-13	Chapter 5/ Operational safety - Reliability Diagrams -	06	Presentation of reliability analysis
14	Chapter 5/ Operational safety - Applications	03	Presentation of reliability analysis

3- Content elements (Practical work)

Diagnosis of production systems

1. General

Coded	Ind -MDSI 5 1 11	Level/Semester	3/S5	Coefficient	3	Credits	3
Course	Industrial Enginee	Volume. H. (CI)	42				
Responsi ble	Saif MAMI	Volume. H. (TP)	0				
Module	Diagnosis of production systems					Version	09/2023

Course description (Course objective):	
Diagnosis of production systems	

Prerequisites:	Keywords:
Basic knowledge of computers, Knowledge of industrial electrical, mechanical and pneumatic technologies, good mastery of reading electrical and mechanical diagrams.	Diagnostic sheet, diagnostic software, sensor, control device, actuator; Type of maintenance (conditional, preventive), failure FMEA

Specific objectives of the course (OBJ):

OBJ 1: Acquire a fault-finding methodology to optimize corrective maintenance interventions in different technologies (electrotechnics, pneumatics, hydraulics and automation.

OBJ 2: Know how to use diagnostic software

Necessary material:	
Diagnostic software	

Week(s)	Chapters/Content Items	No.	Goals
		– HR	

1-2	1- General information on the main methods of industrial maintenance management (curative maintenance - Progress of a troubleshooting intervention - Intervention report - Reporting to the historical file - Use of a historical file 2- Preventive maintenance 3-The challenges of maintenance - Failure costs, - repair costs, - production losses,	9h	Understand the types of maintenance, the progress of a repair intervention and how to write reports
3-	TD on types of maintenance, failure cost, maintenance cost, etc.	3h	Know how to calculate maintenance costs, failure costs, write a DI sheet
4	-Learn about the origin of the breakdown: Analyzes of breakdowns and their issues -Failure modes: More implicit diagnosis through the collection of information	3h	Develop a diagnostic method enriched in advance with a description of the situation (pre-diagnose
5	Problem solving method 1)Problem solving methods applied to fault diagnosis - the SORA method (Locate? Observe? Think? Act) - collection of information - the toolbox: QQOQCPC, The 5 whys, the tree of causes, the functional analysis, Pareto, the action plan, the report		Understand fault finding and problem-solving methods such as Pareto, fault tree, etc.
6-7	Pareto method, fault tree, the 5 whys, FMEA system	6h	Know how to apply fault finding methods (FMEA, ABC, fault tree, etc.) to resolve problems
8-9	Problem solving method 2)Technical approach	6h	Know how to use the multimeter, ohmmeter, oscilloscope to diagnose certain electrical

	- GRAFCET as a sequential automation troubleshooting tool - Visualization - Measuring techniques: - Electrical troubleshooting methodology using a voltmeter - Reminder on continuity measurements with the voltmeter under voltage (value of the ddp.) or with the ohmmeter without voltage (ohmic value with wire cut or not) - The untimely control of contactors, what redundancy and discordance consist of, how treat it - Safety during interventions		components such as contactors, circuit breakers, sensors
10-11- 12	TD (Situations on machine) -Methodology for electrical troubleshooting using a voltmeter or ohmmeter in a situation. -Practical troubleshooting exercises (on automated installations). -Fault diagnosis systems. Risks linked to installation failures. 3 sessions will be devoted to this chapter where each session we study a different system: 1- A mechanical system (variator + electric motor + reducer + plastic feed screw) 2- An electrical system where we study an automatic temperature regulation system 3- A pneumatic system where we study an automatic incrementing and cutting system	9	Know how to read industrial diagrams (electrical, mechanical, etc.) and how to isolate the faulty system then carry out a complete diagnosis on each element of this system in order to find the fault and propose the necessary repairs. Finally knowing how to write a diagnostic sheet.
13	Use of diagnostic software (AUTODATA example)	6h	Know how to use diagnostic software (access technical repair procedures, read diagnostic codes
14	Practical exam, mini-project defense,	3h	Summative evaluation

3- Content elements (Practical work)

Course	Industrial Engine	Industrial Engineering					
Responsi ble	Kamel GARFA					Volume. H. (TP)	
Module	Quality audit	Version	09/2023				

Course description (Course objective):

Training aims

Train auditors capable of auditing a management system according to the principles and guidelines of the ISO 19011 v 2018 standard

educational goals

HAS At the end of the training, the candidate becomes able to identify the responsibilities of the auditor and the audit team

- Define audit objectives
- Plan the audit and develop the audit guide
- Lead opening and closing meetings
- Interviewing (questioning strategy) and taking notes
- Practice formalizing findings
- Structuring an audit report
- Assess the relevance and effectiveness of corrective actions

Prerequisites:	Keywords:
Quality Management, standards and certification,	Quality, audit, processes, standards, certification,
implementation of management systems,	compliance

Specific objectives of the course (OBJ):

OBJ 4: Master the audit process

OBJ 5: Mastery of the ISO 19011v2018 standard

OBJ 6: Identify deviations, audit procedures, and corrective action plans

Necessary material:

Video projection,

QHSE

1. General

Coded	Ind -QAC 5 1 11	Level/Semester	3/S5	Coefficient	3	Credits	3
Course	ourse Industrial Engineering			Volume. H. (CI)	42		
Responsi ble	oonsi Maissa CHaibi			Volume. H. (TP)			
Module	QHSE					Version	09/2023

Course description (Course objective):

The QHSE course refers to training focused on the areas of Quality, Health, Safety, and Environment within an organization. These four aspects are often grouped under the acronym QHSE to emphasize the importance of integrating them holistically into the management of an enterprise's activities.

- 1. **Quality (Q): ** This aspect focuses on continuous improvement of processes, products, and services to meet established quality standards. Quality management systems, such as the ISO 9001 standard, are often addressed in the context of QHSE training.
- 2. **Health (H): ** This encompasses practices aimed at ensuring the cleanliness, health, and well-being of employees. It may include personal hygiene standards, waste management, infection control, etc.
- 3. **Safety (S): ** Workplace safety is a crucial aspect to minimize the risks of accidents and injuries. This can include training on safety procedures, the use of personal protective equipment (PPE), incident management, etc.
- 4. **Environment (E): ** This aspect focuses on reducing the environmental impact of the company's activities. It may include compliance with environmental regulations, waste management, energy consumption reduction, etc.

In the context of the QHSE course, participants are typically exposed to the fundamental principles of each domain, associated standards and regulations, as well as best practices to effectively integrate these aspects into the organizational culture. The ultimate goal is to create a work environment that is safe, healthy,

environmentally friendly, and quality-oriented while meeting legal requirements and stakeholder expectations

Prerequisites:	Keywords:
Management, Organization of a Company	ISO 9001, ISO 14001, ISO 45001, organization, quality, safety, environment, security, Quality Management System

Specific objectives of the course (OBJ):

OBJ 1: Improve compliance rates with standards ...

OBJ 2: Reduce the number of workplace safety incidents

OBJ 3: Achieve and maintain ISO 9001 certification

OBJ 4: Reduce the company's carbon footprint

OBJ 5: Improve customer satisfaction

OBJ 6: Reduce hygiene-related accidents

OBJ 7: Optimize the use of natural resources

Necessary material:

Video projector

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	Introduction, Chapter 1: Fundamentals of Quality Management - The Quality Management System, what is quality, Quality management, Principles of QMS, Documentation of the Quality Management System, Standardization of Quality Management Systems.	6Н	The objectives of the "Fundamentals of Quality Management" typically encompass understanding and implementing key principles and practices to ensure the delivery of high-quality products or services within an organization.
3-4	CHAPTER 2: ISO 9001:2015 Standard Requirements 1. Introduction (Sections 0 to 3): - 0. Introduction	6Н	- Provide a list of references to documents that are essential for the understanding and implementation of the standard.

	- 1. Scope		
	- 2. Normative references		-Establish an understanding of the

language module sheets

Process of test of placement LANGUAGES (English & French)

> New students:

✓ Registration & Admission

All the new students has their admission has the PI register in line via a platform dedicated to the passage of tests level of languages "MyEPIADMISSION"

They provide of the information personal such that their name, their address E-mail And their number of CIN ..

✓ Planning & Passage of Test of level :

A times registered, THE students receive a confirmation registration And are scheduled For pass the tests in English And in French

THE tests are planned In THE labs of LANGUAGES .They pass THE test of language on PC (MCQ) Who evaluate their SKILLS linguistics

✓ Fix of the Testing of level :

THE tests are corrected automatically by the software And the results are generated instantly once that THE test East finished.

THE results are analyzes For determine the level of language of each student.

✓ Attribution of the levels of language :

THE levels are based on of the standards international such that THE frame European common of reference For the LANGUAGES (CEFR)

✓ Ranking In the groups of LANGUAGES & Notification of the results :

In function of their level of language, THE students are assigned has of the groups of language appropriate.

These groups can be constituted in function of level:

- 1- Beginner =A
- 2- Intermediate =B
- 3- Advanced = C

✓ Notification of the results ;

THE students receive their results via the app And Who understand their level of language And their assignment has A band specific

THE students are Next affected In their groups of language according to THE jobs of LANGUAGES displayed on the app

Follow up And assessment:

THE progress of the students are followed All At long of their course learning

Of the assessment periodicals are carried out such that (projects PPT, tests oral, exercises ..) For adjust their progression in function of their needs.

These process guarantee a assessment precise of level of language of the students And their assignment has of the course appropriate For to favor their learning linguistic

Former students:

Transition of former students from one level to another:

For language levels (former $23.24 \Rightarrow 24.25$)

Initial level = A & Average 23.24 $< 13 \rightarrow$ Level A (24.25)

Initial level = A & Average $23.24 > 13 \rightarrow$ Level B (24.25)

** Initial level = B & Average 23.24 <13 → Level B (24.25)

** Initial level = B & Average 23.24 > 13 \rightarrow Level C (24.25)

**Level C =>15 \rightarrow Level C (24/25)

French (Level C)

1. General

Coded	EN-ABC	Level/Semester	5-6	Coefficient	1.5	Credits	2
Course	Engineering					Volume. H. (CI)	21
Responsi ble	Sami MZOUGHI					Volume. H. (TP)	0
Module	Languages & Co	mmunication				Version	10/2023

Course description (Course objective):

The French Communication Techniques course, <u>at level C</u>, aims to develop three skills in the student: Comprehension of writing (CE), Oral production (PO) and Written production (PE), with a view to preparing them for the DELF exam.

The course material is generally a paper version document which offers various educational activities, relating to the materials. The role of the teacher is to provide the student with a certain autonomy in the search for answers. The supports are those of DELF B 2, 2nd Edition - 100% SUCCESS.

Prerequisites:	Keywords:
In principle, the student should have the following	
abilities: understand the essential points of a	
discussion, a text, a press article when the	Understand listen well interact
language used is clear and standard and when it	Understand, listen well, interact
concerns familiar subjects having relates to the	
daily life of the student.	

Specific objectives of the course (OBJ):

OBJ 7: Make reading hypotheses and generally understand the content of a document.

OBJ 8: Enter message scopes.

OBJ 9: React to messages.

OBJ 10: For PE, acquire a methodology allowing successful written productions.

Necessary material:

Paper version documents - Sound recordings - JBL

Week(s) Chapters/Content Items	#HR	Goals
--------------------------------	-----	-------

1-2	CE: How to read a text? / A set of short texts. PE: Analysis of the instructions / Different statements of written production	3 hours	Help the student understand various texts. Understand what is required by the instructions.
3-4	CE: Analysis of positions/testimonies PE: Learn to present a situation, facts / Various texts.	3 hours	Identification of tone, point of view. Learn to identify a situation, facts
5-6	CE: Search for relevant information / Various texts. PE: Expression of personal opinion / PE topics.	3 hours	Identification of the content of a text. Help to formulate ideas, to qualify your comments, to formulate proposals
7-8	informative text: its content, its characteristics. PE: Text production / Writing workshop.	3 hours	Enter the content of a text and report it in writing. PE: Master the structure of the text to be produced.
9-11	CE: The argumentative text / Various texts PE: Writing a formal letter. / Written production instructions.	4.5 hours	CE: Learn to recognize an argumentative text and gNonep its specific features. PE: Learn the formal characteristics of the letter.
12-14	CE: Analysis of points of view / Written testimonies	4.5 hours	Recognize the different positions and their nuances.

English (A level)

1. General

Coded	ENG-ABC	Level/Semester	1-2	Coefficient	1.5	Credits	2
Course	Engineering					Volume. H. (CI)	21
Responsi ble	Sawcen LAAMIRI					Volume. H. (TP)	0
Module	Languages & Com	munication				Version	09/2023

Course description (Course objective):

Whether you already have some basic English or are completely new to it, our English program is divided into three levels (A, B and C). At the start of the academic year, your teacher will define your objectives with you and test your level during an initial assessment in order to help you integrate one of the three levels.

- You will be able to acquire or strengthen your basics in business English as well as your self-confidence.
- You will review and learn the grammatical, oral and written basics.
- You will learn to communicate orally and in writing and you will enrich your vocabulary.
- You will be able to respond orally and follow a conversation.

Prerequisites:	Keywords:
Level A: No specific knowledge necessary	Business English

Specific course objectives (OBJ):

OBJ 11: Oral expression: acquisition of vocabulary relating to working English

(Business English)

OBJ 12: Written expression: writing letters, messages, formats, references, abbreviations, etc.

OBJ 13: The fundamentals: tense, auxiliaries, adjectives, comparatives, pronouns

Necessary material:

The printed course purchased from the printing, data show and baffles service

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	The working day	3h	Vocab: Company departments (ex: HR, PR, finance) and job titles (ex: production manager) Gr: present simple and present continuous
3-4	Corporate culture	3h	Vocab: corporate culture vocabulary and asking for information Gr: collocations
5-6	Developing contacts	3h	Networking vocabulary, present perfect and past simple tenses
7-8	Cultural issues	3h	Cultural awareness, marketing in China and business in Finland vocabulary
9-10	Teamwork	3h	Describing a team, slogans, team-building and verbs with their corresponding nouns and adjectives
11-12	Job applications	3h	How to write a CV, a letter of application and wait for an interview
13-14	Revision	3h	Tenses and vocabulary of all chapters

English (level B)

1. General

Coded	ENG-ABC	Level/Semester	3-4	Coefficient	1.5	Credits	2
Course	Engineering					Volume. H. (CI)	21h
Responsi ble	Sawcen LAAMIRI					Volume. H. (TP)	0
Module	Languages & Communication			Version	09/2023		

Course description (Course objective):

Whether you already have some basic English or are completely new to it, our English program is divided into three levels (A, B and C). At the start of the academic year, your teacher will define your objectives with you and test your level during an initial assessment in order to help you integrate one of the three levels.

You will be able **to acquire or strengthen your basics in business English** as well as your self-confidence. You will review and learn the grammatical, oral and written basics. You will learn to communicate orally and in writing and you will enrich your vocabulary. You will be able to respond orally and follow a conversation.

Prerequisites:	Keywords:
Level B: No specific knowledge necessary	Business English

Specific course objectives (OBJ):

OBJ 14: Oral expression: acquisition of vocabulary relating to working English (Business English)

OBJ 15: Written expression: writing letters, messages, formats, references, abbreviations, etc.

OBJ 16: The fundamentals: tense, auxiliaries, adjectives, comparatives, pronouns

Necessary material:

The printed course purchased from the printing, data show and baffles service

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	Job description and job satisfaction	3h	Vocab: Company departments, corporate culture vocabulary Gr: asking questions at a job interview
3-4	Letters of enquiry and applications	3h	Vocab: How to write a letter of enquiry and an email of application Gr: complex questions
5-6	Promotional activities and branding	3h	The 15 different promotional activies, the power of brands, supermarkets' own brands
7-8	Presenting your business idea	3h	Vocab: Structuring a presentation, signalling the parts of a presentation, making the most presentations Gr: modal verbs
9	Business meetings	1h30	Vocab: Why have meetings? purpose, benefits, importance of team discussions Gr: use of "too" and "enough"
10-11	Customer loyalty	3h	Vocab: the factors which make customers loyal to a company, words and definitions Gr: relative pronouns
12-13-14	Revision	4h30	Revision of the tenses and vocabulary of all chapters

3- Methods evaluation & marks Distribution

Type of assessment		Yes No	Tx Weighting
CC - Continuous assessment (Test/Quiz, Presentation, Report, etc.)	□Yes	□No	
DS - Supervised Duty	⊠Yes	⊠No	40%
EE - Written test (Final exam)	⊠Yes	□No	60%

English (level C)

1. General

Coded	ENG-ABC	Level/Semester	5-6	Coefficient	1.5	Credits	2
Course	Engineering					Volume. H. (CI)	21h
Responsi ble	Sawcen LAAMIRI					Volume. H. (TP)	0
Module	Languages & Communication			Version	09/2023		

Course description (Course objective):

Improve your English to communicate in writing and orally in a professional Courseroom context, and prepare for the TOEIC test (Test of English for International Communication). Prepare to improve your TOEIC score in 18 hours of lessons.

TOEIC teaching resources and methods:

Table, internet access. Interactivity with the teacher. Refresher, time management strategy, practical exercises, mini tests targeted to student needs, detailed corrections. Review of progress made. Tips and revision strategy before the exam.

Composition: 200 multiple choice questions (MCQ)

- 100 oral comprehension questions with audio support (4 exercises, duration 45 minutes)
- 100 written comprehension questions (3 exercises, duration 75 minutes)
 - ⇒ The TOEIC is based on authentic examples taken from international professional situations (meetings, travel, telephone, etc.)

Results: a distinct assessment of oral comprehension and written comprehension

- a score of 5 to 495 points for each
- a total score between 10 and 990 points

Prerequisites:	Keywords:
Level C: This course is intended for all students registered at level C in order to take the TOEIC exam	TOEIC, time management, oral and written

Specific course objectives (OBJ):

OBJ 17: Prepare in the best conditions for taking the TOEIC

OBJ 18: Master the essential points of grammar and conjugation

OBJ 19: Enrich your vocabulary

OBJ 20: Improve your oral and written comprehension

Necessary material:

The printed course purchased from the printing, data show and baffles service

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	Detailed overview of the exam	3h	 General presentation of the test and its objectives. Detailed breakdown of the test: written part/oral part. ⇒ Complete mock test in real time, complete and detailed correction
3-4	Assessment of student level and revisions	3h	 Review of current knowledge, strengths and areas for improvement. Consolidation at the level of fundamental grammatical structures ⇒ Fill-in-the-blank exercises, multiple choice questions, reformulation exercises
5-6-7	Preparation for the oral comprehension part	4h30	 Listening and reconstitution of professional dialogues. Improved oral comprehension. Vocabulary recognition Understand the story of a current event or a news item: know how to distinguish the main elements (date, place, actions, etc.).
8-9-10	Improvement of written comprehension	4h30	 Work on enriching everyday vocabulary Work to enrich professional and commercial vocabulary. Know how to read and analyze documents used in professional situations: e-mails, summaries, reports, notices, etc.

11-12-13- 14	Final mock test	6h	Real exam situation to evaluate and validate your progress. Detailed correction
-----------------	-----------------	----	---

PFA (end of year project)

1. General

Coded	TV-402	Level/Semester	2/S4	Coefficient	3	Credits	3
Course	engineer					Flight. H. (CI)	
Responsibl e	educational manag	er				Flight. H. (TP)	42h
Module	PFA (end of year pro	oject)				Version	09/2023

Course description (Course objective):

- The PFA (End of Year Project) is a project which lasts one semester, which resolves a problem and which must be defended in front of a jury.
- This project is an opportunity for the student to prepare themselves to know how to write a report, present their work, to highlight it and to improve their skills
- PFAs start from the second semester and will end on the exam week of the second semester.
- Each student is expected to contact one of these teachers for supervision
- All 4th year engineering students must be called to a meeting with their educational supervisors and the head of the internship service so that they are properly oriented respectively: Pedagogically and administratively.
- PFA internships must be validated at the end of a defense which is carried out following the submission of a report and an internship certificate duly completed by the company supervisor.
- The teacher (school tutor) helps the student to refine the end-of-year project. He provides educational support to the student (working methodology, definition of the problem or mission, establishment of the plan, writing of the report, etc.)

OBJ 1: Discover the industrial world

OBJ 2: Solve a problem **OBJ 3:** Writing of the report

OBJ 4:

Necessary material:	

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	Discover society (observation and learning)	6h	Read all documents relevant to the internship related to the company and the project Learn the tools and software used in the business. Meeting with the team and supervisor Introduction to projects and internship objectives
2-4	Define the problem and objectives	9h	identification of the tasks to be accomplished. Taking inventory of all the missions to be carried out is necessary to be sure of achieving your objective on time. Observe operations in the field Make a project schedule
5-8	The realization of the project		all tasks will be accomplished and the project will come to life. You have to ensure that everything goes as planned and that the objectives are achieved.
	Autonomy and responsibility	9h	Take more responsibility in the project Work more independently Regularly take into account the progress of tasks Work collaboratively with other team members
9-11	Evaluation of the achievement and proposal of improvement actions	9h	Study of the effectiveness of the achievement and compare with the objective Check the work accomplished with the supervisor
12-14	Close the work and propose forecasts	9h	Prepare an internship report

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals
14	Practical exam, mini-project defense,	3h	Summative evaluation

4- Evaluation methods & Marks Distribution

The student must submit a PFA report with a monitoring sheet signed by their educational supervisor in order to validate authorization for submission on time.

- In the absence of an internship certificate on the day of the defense, the jury will not accept the student and consequently the student will have a zero (unless the student brings back an authorization signed by the internship service)
- ♣ The evaluation is carried out by at least two members of the jury (supervisor, jury 1)

4

- The evaluation is also done by assigning grades on a well-detailed report which is validated by the department head and the director.
- Among the evaluation criteria: Oral Expression, Rigor of the approach, content of the presentation, Discussion, Behavior and attendance, structure and content of the report, etc.

5- Evaluation criteria

Written report (5pts)
Oral Presentation (5pts)
Mastery of the subject (5pts)
Project objective (5pts)

Human Resource Management

1. General

Coded	TV-501	Level/Semester	3/S5	Coefficient	1.5	Credits	3
Course						Volume. H. (CI)	21
Responsi ble	Ati Abderraouf					Volume. H. (TP)	
Module	HRM					Version	09/2023

Course description (Course objective):

At the end of this module, the engineering student must be introduced to the main concepts, methods and most common practices of HRM. Know the practices — which vary depending on the company — by which an engineer employee is recruited, evaluated, paid, etc..; Identify the "shared" role of human resources manager that an engineer who supervises a few employees quickly has; Develop critical thinking skills in relation to themes and discussions relating to the human resources function.

Prerequisites:	Keywords:

Specific objectives of the course (OBJ):

OBJ 3: Identify key human resources activities and decision-making
OBJ 4: Identify key human resources activities and decision-making
OBJ 5: Identify the information needed to resolve certain problems.

Necessary material:			
:			

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	Chapter I: Rise of HRM	3 hours	Identify the transition from personnel management to HRM as well as the objectives of the latter
3-4	Chapter II: Study and analysis of positions within the company	3 hours	Role and importance of job analysis and its link with other HRM activities, describe the methods for collecting information on positions, write a description of the required profile
5-6	Chapter III: Recruitment and integration	3 hours	Presentation of the recruitment process, selection and integration
7-8	Chapter IV: Forecast Management of Jobs and Skills	3 hours	Understand the importance and purpose of GPEC, distinguish it from workforce management, successfully manage workforce and skills
9-10	Chapter V: Training	3 hours	Know the links between training and other HRM activities, know the different training methods, evaluate the effectiveness of a training program
11-12	Chapter VI: Remuneration	3 hours	Definition and importance for employees and for the company, present remuneration systems
13-14	Study of practical cases	3 hours	Evaluate students' level of learning with practical cases

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals
13-14	Mini-project support,	3h	Summative evaluation

ESB Entrepreneurship and Small Business

1. General

Coded	TV-503	Level	3/S5	Coefficient	1.5	Credits	2
Course	Engineering					Volume. H. (CI)	21
Option	Moez ZOUARI	ZOUARI			Volume. H. (TP)	0	
Module	ESB					Version	09/2023

Course description (Course objective):

The objective of the course is to master small business entrepreneurial skills and understand its different functions.

The ESB certification is designed to test and validate fundamental concepts and knowledge in entrepreneurship and small business management. These fundamental concepts include

- Entrepreneurship;
- Recognize and evaluate opportunities;
- Plan, start and operate a business;
- Marketing and sales;
- and finance and business financing.

Prerequisites:	Keywords:
None	Entrepreneurship, management, business environment, accounting, commerce, finance

Specific objectives of the course (OBJ):

OBJ 1: Identify the characteristics of entrepreneurs and as well as the risks, benefits, opportunities and disadvantages of being an entrepreneur

OBJ 2: Identify the advantages and disadvantages of different types of opportunities

OBJ 3: Identify the objectives, value of a business plan and the appropriate legal structure

OBJ 4: Identify the advantages and disadvantages of various sources of startup financing

OBJ 5: Identify business operations: human capital needs, intellectual property issues, standard operating procedures, etc.

OBJ 6: Develop a sales strategy, identify and analyze the costs/benefits of finding customers, identify how to retain customers, and determine the value and methods of communication.

OBJ 7: Interpret basic financial statements, identify and analyze cash flows, and identify the company's break-even point.

Necessary material:	
None	

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1.2	The entrepreneur: - Identify the characteristics of entrepreneurs - Given a scenario including a self-assessment result, identify the strengths, weaknesses, and risk tolerance the self-assessment identifies and how to compensate with services - Given a scenario, recognize a business opportunity - Identify the risks, benefits, opportunities and disadvantages of being an entrepreneur	3h	OBJ 1
3.4	 Opportunity recognition: Identify the advantages and disadvantages of different types of opportunities (for example, starting a new business, purchasing an existing business, and purchasing a franchise) Given a scenario, analyze the demand for the good or service and opportunities in an environment Given a scenario, identify customers or potential customers for a business Given a scenario, recognize a value proposition 	3h	OBJ 2

	Start a business :		
5.6	 Identify the objectives and value of a business plan Identify the appropriate legal structure, advantages and disadvantages for different legal structures for a business Given a scenario, identify different types of licenses and regulations needed Identify the pros and cons of various sources of startup funding: equity (friends/family, angel investors, venture capital), debt (bank, credit cards, personal loans), and grants (government, foundation, business) In a given scenario, identify the support available to the business at the local, state, and federal levels Identify ethical practices and social responsibilities of a company Identify potential exit strategies for a business 	3h	OBJ 3 OBJ 4
7.8	Commercial operations: - Based on a scenario, identify key positions and human capital needs (including compensation and benefits) - Given a scenario, determine if the work can be done by the owner or if employees or service providers are needed - In a given scenario, identify the required taxes - Using a scenario, identify intellectual property issues related to trademarks, copyrights and patents. - In a given scenario, identify standard operating procedures (e.g., setup, conduct, internal controls, segregation of duties) - Based on a scenario, identify the factors that led to sustainability	3h	OBJ 5
9.10	 Marketing and sales: Based on a scenario, develop a sales strategy and identify the characteristics of a successful sale Given a scenario, identify and analyze the costs/benefits of finding customers Based on a scenario, identify how to retain customers and develop a relationship with loyal customers Based on a scenario, determine the value and methods of communication, including: websites, brochures, social media and advertising. 	3h	OBJ 6
11.14	Financial management :	6h	OBJ 7

- Given a scenario, interpret basic financial statements such as	
income statements and balance sheets	
- Using a scenario, identify the factors that influence credit ratings	
and the importance of a positive credit rating	
- From a list of expenses, identify which ones are fixed or variable	
- Given a scenario, identify the factors that impact the price for the	
customer	
- Given a scenario, identify and analyze cash flows, including accounts	
receivable, accounts payable, inventory and debt.	
- Given a scenario, create a cash budget	
- Given a scenario, identify the company's break-even point	
	l .

subject Sheets Projects and internships

Course of Internships at EPI

Importance of Internships:

Internships in companies are an integral part of the EPI Group's training.

These internships in companies are mandatory for obtaining the diploma.

Also, the EPI Group pays particular attention to their progress.

During these internships, students develop their personal qualities, learn to work in a team and carry out projects.

Professional internships must be validated at the end of a defense.

Types of Internships:

Internships in companies are of three types:

- **Introductory Internship**: they concern 3rd year students
 - ✓ Objective: To give students the opportunity to discover the professional world and join the company.
 - ✓ Minimum duration: 1 month
- **Professional internships** (design and/or implementation of projects linked to the specialty): they concern 4th year students
 - ✓ Objective: The student is expected to carry out the design and/or implementation of projects related to his specialty
 - ✓ Minimum duration: 1 month
- **PFE internships**: they concern 5th year students
 - ✓ Objective: Implementation of all the skills acquired during schooling to carry out a project allowing one to project oneself into the professional world
 - ✓ Minimum duration: 16 weeks

The EPI Group supports its students during these internships and provides them with the Internship Service for coordination with the different departments and host companies (choice, validation, etc.).

Evaluation of the Internships:

The internship results in the writing of a report, which must be presented before a jury. This jury must be composed of at least two members:

- A president who must be a teacher from the EPI Group.
- An examiner: who must be a teacher from the EPI Group.
- The university supervisor who must be a teacher from the EPI Group.
- An internship tutor who must represent the host structure.

All internships must be validated at the end of a defense.

For this, each student is required to submit to the internship service:

- A connection form (to download from the "Internship forms" menu on our website episup.com)
- An internship certificate obtained from the company and duly completed and signed.
- Supervision monitoring sheet duly completed by the educational supervisor
- Company appreciation form: duly completed by the professional supervisor
- The internship report bearing the EPI Group cover page (to be downloaded from the "Internship forms" menu) in at least two copies (depending on the number of jury members) and one scanned copy.

Projects and internships (PFE, Professional internships, Introductory Internship)

* PFE

1. General

Coded	Pro- 5 2 03	Level/Semester	3/S6	Coefficient	10	Credits	24
Course	Engineering course					Flight. H. (CI)	
responsible	Internships department			Flight. H. (TP)			
Module	PFE			Version	09/2023		

Course description (Course objective):

This involves the implementation of all the skills acquired during schooling to carry out a project, generally proposed by a company, allowing one to project oneself into the professional world.

The student works full-time within the company and is supervised by a teacher.

During an End of Study Project (PFE), the student is led to develop a problem based on a specific professional situation.

The main objective of this last internship is to affirm the skills of our future engineers and to prepare them effectively for their entry into professional life.

The subject of the PFE internship generally leads the future engineer to encounter challenges and allows him to learn to act accordingly.

Prerequisites:	Keywords:

Specific objectives of the course (OBJ):

OBJ 1: The PFE ideally allows the intern to carry out a project from A to Z...

OBJ 2: Go through all the stages necessary for its realization, from the study of specifications to final delivery

OBJ 3: Participate in technical studies: definition of problems, acquisition, compilation and analysis of data, formulation of hypotheses and recommendations;

OBJ 4: Put the student in the position of an engineer,

OBJ 5: Refine their first career orientations,

OBJ 6: Measure the role of the company's different engineers, OBJ 7: Discover the different functions and their relationships,

OBJ 8 : Write an end-of-studies report.

Necessary material :	

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
			Read all documents relevant to the internship
	Discover society (observation and		related to the company and the project
1-2	learning)		Learn the tools and software used in the business.
	leurning)		Meeting with the team and supervisor
			Introduction to projects and internship objectives
			Clearly define the objectives to be achieved with
			the project.
3-4	Establishing project objectives		Observe operations in the field
			Make a project schedule
			Establish a Problem
			project delivery , including specific steps to follow
			and resources required.
4-5	Project planning and design		Design potential solutions to meet project
			objectives
			Collect relevant data necessary to carry out the
5-7	Data collection and situation		project.
3,	analysis		Analyze data to understand the causes of the
			problem using analytics tools
7-8	Project implementation		Implement the solutions designed within the
, 0	1 Toject implementation		project framework .
			Take more responsibility in the project
8-9	Autonomy and responsibility		Work more independently
	riationally and responsibility		Regularly take into account the progress of tasks
			Work collaboratively with other team members
			Test the developed solutions and ensure that they
9-12			meet the specifications and needs of the project.
	Testing and validation		Validate the results obtained with the internship
	results and validation		supervisor or the team responsible for the project
			in the company.
	Close the work and propose		
12-14	forecasts		Prepare an internship report
	J = 1 = 1 = 1 = 1		

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals	
	:			
	:			
12	Practical exam, mini-project defense,	3h	Summative evaluation	

4- Evaluation methods & Marks Distribution

- The student must submit a PFE report with a monitoring sheet signed by their educational supervisor in order to validate authorization for submission on time.
- In the absence of an internship certificate on the day of the defense, the jury will not accept the student and consequently the student will have a zero (unless the student brings back an authorization signed by the internship service)
- The evaluation is carried out by at least three members of the jury (supervisor, president of the jury and rapporteur)
- The evaluation is also done by assigning grades on a well-detailed report which is validated by the department head and the director.
- Among the evaluation criteria: Oral Expression, Rigor of the approach, content of the presentation, Discussion, Behavior and attendance, structure and content of the report, etc.

5- Evaluation criteria

Criteria	
Oral Expression:	
- Ability to keep the audience attentive	/04
- Judicious use and quality of transparencies.	
- Vocabulary, use of appropriate technical terms	
- Respect the planned time.	
Steps:	
- Rigor of the approach: choice, tools, method and synthesis	/04
Content of the presentation:	/08
- Level of know-how, technicality	
- Personal work carried out.	
- Presentation of objectives achieved	
Discussion :	/04
- Mastery of aspects related to the subject, justifications, etc.	
Behavior, Attendance, Punctuality and Motivation	/04
Personal contribution and initiative	/06
Scientific and technological knowledge	/05
Level of know-how , technicality, creativity and functionality	/05
Report Structure	/06
-Acknowledgements, summary, introduction, presentation of the company, specifications, technical content, conclusion	
- Balanced ratio (Volume)	
- Clear and progressive presentation of information	
- Reasonable use and definition of technical terms, standardization	
Content of the Report	/08
- Presentation of the work requested (specifications) then of the entire made work.	
- Technical content	
- Meets standards	
-Importance of personal work (volume and level)	
- Justification for the choice of solutions adopted.	
- Comparison of the objectives achieved with the content of the specifications	
- Appendices, Bibliographies	
Presentation of the report	/06
-Pagination, layout	
-Spelling, grammar, style.	
- Clarity and quality of figures, diagrams, etc.	

6- Web references (useful links):

- Author, Title, URL, Year
- ..

7- Working environment (Facilities necessary for learning)

None

* Professional internships

Coded	Pro- 5 2 02	Level/Semester	3/S6	Coefficient	10	Credits	3
Course	Engineering course					Flight. H. (CI)	
responsible	Internships department				Flight. H. (TP)		
Module	Professional internships				Version	09/2023	

Course description (Course objective):

During his professional internship, the student, who has achieved his 4th year successfully, must complete a practical case whose theme depends on his specialization

The student works full-time within the company but is not supervised by a teacher.

It's a period of practical training or work experience undertaken by a student in a professional setting relevant to his field of study and career goals.

It provides the intern with the opportunity to apply theoretical knowledge gained in academic settings to real-world scenarios, gaining practical skills and insights into their chosen profession. Interns may also have the opportunity to network with professionals in their field, build valuable connections, and sometimes even secure PFE opportunities upon completion of the internship.

Prerequisites:	Keywords:

Specific objectives of the course (OBJ):

OBJ 1: Providing students with practical, real-world experience in their field of study or desired career path.

OBJ 2: Develop and refine technical skills, soft skills, and industry-specific competencies necessary for future success in the profession.

OBJ 3: Receive constructive feedback from supervisors and mentors to identify strengths, areas for improvement, and opportunities for further growth.

OBJ 4: Gain insights into the expectations and realities of the workforce, facilitating a smoother transition from student life to professional employment post-graduation.

OBJ 5: Write a professional internship report.

Evaluation methods & Marks Distribution

 The student must submit a professional internship report with a Internship certificate and Company appreciation form duly completed and signed in order to validate authorization for submission on time.

- In the absence of an internship certificate on the day of the defense, the jury will not accept the student and consequently the student will have a zero (unless the student brings back an authorization signed by the internship service)
- The evaluation is carried out by at two members of the jury.
- The evaluation is also done by assigning grades on a well-detailed report which is validated by the department head and the director.
- Among the evaluation criteria: Oral Expression, Rigor of the approach, content of the presentation, Discussion, Behavior and attendance, structure and content of the report, etc.

* Introductory Internship

Coded	Pro- 5 2 01	Level/Semester	3/S6	Coefficient	10	Credits	3
Course	Engineering course					Flight. H. (CI)	
responsible	Internships department				Flight. H. (TP)		
Module	Introductory Internship			Version	09/2023		

Course description (Course objective):

It is an internship for discovering the company

the student spend time observing and shadowing experienced professionals within various departments or teams. This allows them to gain insights into different aspects of the organization's operations and understand the roles and responsibilities of various team members.

As the internship progresses, the student is gradually given more opportunities to participate in hands-on tasks and projects under the guidance and supervision of mentors or supervisors. These tasks may be relatively simple or routine at first but gradually increase in complexity as the student gains confidence and demonstrates competence.

Prerequisites:	Keywords:				

Specific objectives of the course (OBJ):

OBJ 1: Help students explore different career paths within their field of study or industry by exposing them to various departments, roles, and responsibilities

OBJ 2: Provide students with opportunities to develop fundamental skills relevant to their field, such as communication, teamwork, problem-solving, and time management

OBJ 3: Offer students practical, hands-on experience through tasks, projects, and assignments that contribute to the organization's goals and objectives.

OBJ 4: Facilitate networking opportunities for students to connect with professionals in their field,

OBJ 5: Prepare students for future internships or employment opportunities by equipping them with essential skills, experiences, and insights into the professional world.
