Electromechanical Engineering

2023-2024

MANUAL STUDY PLAN

&

MODULE SHEETS

Electromechanical Engineering Program

The electromechanical engineering program has been completely redesigned according to new realities. It provides all students with solid training in the main areas of mechanical engineering and electrical engineering which prepares them to practice the engineering profession in industry. Basic courses in electromechanical engineering emphasize analysis, design and implementation. From the first year, students follow specialty courses and carry out an integrative project allowing them to apply the knowledge acquired. The program integrates the use of modern design tools as well as an enriched experimental component.

After solid basic training in ElectroMechanical Engineering acquired during the first four semesters, engineering students choose from two specialty courses:

- Automatic and mechatronics.
- Aeronautics
- Industrial maintenance

At the end of a semester of courses in their Responsible, the engineering student completes their training with a six-month End of Study Project (PFE) in industry.

Contents Table

<i>Electromechanical Engineering Study Plan</i>	6
<i>Content sheets</i>	13
<u><i>COMMON CORE</i></u>	<u>13</u>
Mathematics for engineers	14
Probability and Statistics	18
Electrical Circuits	22
Materials and structures	26
Analog Electronic.....	31
Fluid mechanics	35
Continuum mechanics MMC.....	38
Thermic.....	41
Thermic Machines	44
Manufacturing processes	47
Electrotechnics	51
Signal processing	55
Mechanical engineering	59
Certification Preparing CAO 1	62
Mechanical Design 2.....	66
Quality - Certification - Standards	70
CAO electrical systems	73
Metal Structures and Welding Processes.....	76
RDM.....	79
Servicing and regulation.....	84
Reliability Control / GMAO.....	87
Organization & Production Management	91
Manufacturing Analysis	94
Certification Preparing CAO 2	97
Mechanical design 3.....	100
Solid Mechanics.....	103
Modeling and management of electrical networks	108
Programmable controllers.....	111
Robotics and microcontroller	114
Vibration Mechanics.....	117

ERP & GPAO.....	125
Lean Manufacturing	128
Hydraulic and pneumatic systems.....	131
Sensor theory	135
Production techniques and CAM.....	138

Mathematics for engineers

1. General

Coded	GELM 3 103	Level/Semester	1/S1	Coefficient	3	Credits	3
Course	<i>Engineer</i>					Volume. H. (CI)	42
Responsible	<i>Zied Garbouj</i>					Volume. H. (TP)	
Module	Mathematics for engineers					Version	<i>09/2023</i>

Course description (Course objective):

This course allows students to gain advanced knowledge of mathematics and develop skills to solve engineering problems using mathematical techniques.

Prerequisites:

L1 and L2 mathematics courses
Mathematical tools at a BAC+2 level

Keywords :

- Functions with a real variable (limit and continuity).
- Derivation and primitive.
- Integral calculation.
- Differential equations.

Specific objectives of the course (OBJ_i):

At the end of this course, students will:

OBJ 1: Be able to calculate Fourier transforms of non-periodic functions.

OBJ 2: Understand the notion of the convolution product.

OBJ 3: Understand the concepts of Laplace transforms and inverse Laplace transforms.

Be able to solve a differential equation using Laplace transforms.

OBJ 4: Know how to decompose a periodic signal into a Fourier sum.

Necessary material :

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	Chapter 1: Laplace Transformation - General - Properties - Convolution	6h	Introduction to the Laplace transform and its use to solve linear Ordinary Differential Equations (ODE) of order n
3-4	-Practical methods for calculating the image and an original -Application: Use the Laplace transform to solve a differential equation	6h	
5-6	TD-Series 1	6h	
7-8	Chapter 2: Fourier Transformation -General	6h	In this chapter, to simplify, we will introduce the notion of Fourier transform on \mathbb{R} rather than on \mathbb{R}^d . This short chapter is an interesting application of

9-10	-Terms -Properties	6h	the previous integration course, in the sense that many results are used (dominated convergence theorem, continuity and differentiability theorems for parameter integrals, convolution product, density of step functions in L 1 ...).
11-12	-Convolution - Inversion - Plancherel and Parseva formulas TD=Series 2	6h	
13-14	Detailed series of exercises throughout the course	6h	Evaluate the overall level of students and rectify gaps

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals

4- Evaluation methods & Marks Distribution

Type of assessment	Yes No	Tx Weighting
<i>CC - Continuous assessment (Test/Quiz, Presentation, Report, etc.)</i>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
<i>DS - Supervised Duty</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	40%
<i>EE - Written test (Final exam)</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	60%
<i>EP - Practical test (TP- TP exam / MP- Mini project)</i>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	

- Material 100% TP : Average = 20% CC + 80% EP

- **100% CI material** : Average = 40% DS + 60% EE
- CI+TP material : Average = 20% DS + 20% EP + 60% EE

5- Evaluation criteria

- Authorized documents : Yes No
- Authorized search engine : Yes X No
- Criterion 1: Understanding of the content (4 points)
- Criterion 2: Application of knowledge (10 points)
- Criterion 3: Critical analysis (4 points)
- Criterion 4: Clarity and organization (2 points)

Course	<i>Engineer</i>					Volume H. (CI)	21h
Responsible	<i>Ben Haj Mbarek mohamed Hedi</i>					volume. H. (TP)	0
Module	<i>Probability and Statistics</i>					Version	09/2023

Course description (Course objective):

study of the laws governing random events, including the collection, analysis, interpretation, and display of numerical data.

Prerequisites:	<i>Keywords :</i>
Basic algebra	<ul style="list-style-type: none"> - <i>Probability</i> - <i>Statistics</i> - random experience

Specific objectives of the course (OBJ_i):

Upon completion of this module, the student will be able to:

OBJ 1: random variable study.

OBJ 2: Variance and standard deviation calculation.

Necessary material :

NONE

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-3	<p>Chapter 1: INTRODUCTION TO CALCULATION OF PROBABILITIES</p> <p>1. Basic concepts</p> <p>1.1 Notions of random experience and fundamental set</p> <p>1.2 Concept of event</p> <p>1.2.1 Relationships between events</p> <p>1.2.2 Complete event system</p> <p>2. Probable space and probability</p> <p>2.1 Axioms of probability</p> <p>2.2 Properties</p> <p>3. Conditional probability</p> <p>3.1 Definition</p> <p>3.2 Formula for total probabilities</p> <p>4. Independence of events</p> <p>5. Bayes formula</p>	4.5	<p><i>At the end of this chapter, the student will be able to:</i></p> <p>knowledge of the conditional probability and Independence of events</p>
4-6	<p>CHAPTER 2: COUNTING METHODS AND PROBABILISTIC DRAWING SCHEMES</p> <p>1. Enumeration method: combinatorial analysis</p> <p>1.1 The multiplication rule</p> <p>1.2 Permutations</p> <p>1.3 Arrangements</p> <p>1.4 Combinations</p> <p>2. Probabilistic drawing schemes: urn models</p> <p>2.1 General</p> <p>2.2 Urn models</p>	4.5	<p>combinatorial analysis , Permutations , Arrangements , Combinations and Urn models</p>
7-10	<p>CHAPTER 3: RANDOM VARIABLES</p> <p>1. General and distribution function</p> <p>2. Discrete random variables</p> <p>2.1 Definition of a random variable and distribution function</p> <p>2.2 Moments of a discrete random variable</p> <p>2.2.1 Mathematical expectation</p> <p>2.2.2 Variance and standard deviation</p> <p>3. Continuous real random variables</p> <p>3.1 Definition of a real continuous random variable</p> <p>3.2 Density function of a continuous random variable</p>	6	<p><i>able to calculate the</i> Mathematical expectation, variance and standard deviation</p>

	3.3 Moments of a discrete random variable 3.3.1 Mathematical expectation 3.3.2 Variance and standard deviation 3.4 Quantile of a continuous random variable 4. The moment generating function 5. Transformation of random variables		
11-14	CHAPTER 4: USUAL LAWS 1. Discret laws 1.1 Bernoulli's law 1.2 The Binomial law 1.3 Poisson's law 2. Continuous laws 2.1 The Uniform Law continues 2.2 The exponential law 2.3 The Normal law and the reduced centered normal law 2.4 Laws derived from the normal law	6	<i>Knowledge of different usual laws</i>

Electrical Circuits

1. General

Coded	<i>GELM3105</i>	Level/Semester	1/S1	Coefficient	3	Credits	4
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	21
Responsible	<i>Kais BOUZRARA</i>					Volume. H. (TP)	21
Module	<i>Electrical circuits</i>					Version	<i>09/2023</i>

Course description (Course objective):

The general objective of this module is to present the basic notions of electronics , the fundamental methods of calculating direct current and alternating current electrical circuits .

Prerequisites:	Keywords :
<i>Basic electricity, electrokinetics</i>	<i>Thévenin, Norton's theorem, Millmann's theorem, Kinnely's theorem).</i>

Specific objectives of the course (OBJ_i):

OBJ 1 : *Study of electrical circuits in continuous mode (determination of electrical quantities: voltage and current in each dipole constituting the circuit)*

OBJ 2 : *Study of electrical circuits in sinusoidal regime (determination of electrical quantities: voltage and current in each dipole constituting the circuit)*

OBJ 3 : *Transient study of first order electrical circuits*

Necessary material :

Test plates, resistors, capacitors, inductors, ammeters, voltmeters, low frequency generators, oscilloscopes.

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-4	<i>Linear electric circuits in continuous mode</i> : definitions, elements of the electric circuit, Ohm's and Kirchhoff's law, fundamental theorems (association of dipoles,	6	<i>Study of electrical circuits in continuous mode</i>

	<i>superposition theorem, Thévenin's theorem, Norton's theorem, Millmann's theorem, Kinnely's theorem).</i>		
5-8	Linear electrical circuits in sinusoidal regime : characteristics of a sinusoidal signal, its Cartesian, Fresnel and complex representation, passive dipoles in sinusoidal regime, powers in sinusoidal regime.	6	Study of electrical circuits in sinusoidal regime:
9-12	Linear electrical circuits in transient regime : Definitions (steady regime, variable regime, permanent regime, transient regime, etc.), equation of transient regimes, Responses of first order circuits (Charging/Discharging of a capacitor through a resistor , establishment and breaking of current in a choke through a resistor), Responses of first order circuits (Charging/Discharge of a capacitor through a resistor and a choke, etc.)	6	Transient study of first order electrical circuits
13-14	Quadrupoles : Definition, Reciprocity and Symmetry, Characteristic Quantities, Study of different Matrix representations, Association of Quadrupoles, Adaptation of impedances	3	Study of the modeling of quadrupoles using matrix representations

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals
1-2	Verification of Kirchhoff's laws, the voltage and current divider : Carrying out measurements of current intensity and electrical voltage in a direct current circuit. Practical verification of Kirchhoff's laws, voltage divider and current divider.	3	Mastery of Kirchhoff's laws, voltage and current divider
3-4	Application of some theorems of circuit analysis electrical : Study and verification of the superposition theorem. Study and verification of Thévenin's theorem. Use of electrical appliances.	3	Mastery of Thévenin's theorem and superposition
5-6	Study of some electrical circuits in sinusoidal regime : Study of circuits comprising passive elements R, L and C in sinusoidal regime. Experimental determination of the phase shift between two electrical quantities	3	Analysis of electrical circuits in sinusoidal regime
7-8	Application of some theorems in sinusoidal regime: Study and verification of Kirchhoff's laws, voltage divider and	3	Application of Kirchhoff's laws to

	current. Study and verification of Thévenin's theorem. Use of electrical appliances		<i>electrical circuits in sinusoidal regime</i>
9-12	Study of RC, RL and RLC circuits in transient mode: use of the oscilloscope to visualize electrical signals. Transient study of RC, RL and RLC circuits and verification of experimental results with theory. Experimental determination of the characteristic time constant of the circuit using an acquisition with the oscilloscope.	6	<i>Study of electrical circuits in transient conditions</i>
12	<i>Practical exam</i>	3	<i>Summative evaluation</i>

4- Evaluation methods & Marks Distribution

Type of assessment	Yes No	Tx Weighting
<i>CC - Continuous assessment (Test/Quiz, Presentation, Report, etc.)</i>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
<i>DS - Supervised Duty</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	20%
<i>EE - Written test (Final exam)</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	60%
<i>EP - Practical test (TP - TP exam)</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	20%

- **Material 100% TP** : Average = 20% CC + 80% EP
- **100% CI material** : Average = 40% DS + 60% EE
- **CI+TP material** : **Average = 20% DS + 20% EP + 60% EE**

5- Evaluation criteria

- *Authorized documents* : Yes No
- *Authorized search engine* : Yes No
- *Criterion 1: Understanding of the content (4 points)*
- *Criterion 2: Application of knowledge (10 points)*
- *Criterion 3: Critical analysis (4 points)*
- *Criterion 4: Clarity and organization (2 points)*

Materials and structures

1. General

Coded	<i>GELM3109</i>	Level/Semester	<i>1/S1</i>	Coefficient	2.25	Credits	3
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	21
Responsible	<i>Ahmed HADJ TAHER</i>					Volume. H. (TP)	10.5
Module	<i>Materials & Structures</i>					Version	<i>09/2023</i>

Course description (Course objective):

The manufacture of an object requires reflection on the function it will have to fulfill, the material which will constitute it and the manufacturing process which will achieve the desired shape. Thus, the notion of material is inseparable from the interest that the substance chosen may represent with the aim of obtaining a finished object having a precise function.

Every engineer must have a minimum knowledge of the mechanical behavior of materials. In addition, the engineer is frequently called upon to consult documents dealing with related subjects such as, for example, rational approach to the choice of materials, cleanliness of materials and microstructure.

This course therefore has the main objective of familiarizing students with the field of materials, as well as providing them with in-depth knowledge of the properties of materials to better choose the right candidate according to the conditions of use.

Prerequisites:	Keywords :
<i>Bac+2 level</i>	<i>Materials ; shapes; processes</i>

Specific objectives of the course (OBJ_i):

OBJ 1 : *Understand and know the standardized designation, properties and areas of application of metallic materials and the techniques for their development.*

OBJ 2 : *Describe the equilibrium structures, based on phase diagrams, of binary alloys (ferrous and non-ferrous alloys).*

OBJ 3 : *Understand treatments to improve the use and serviceability properties of metallic materials*

Necessary material :
<i>Data show ; handout</i>

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1- -2	<p><i>Chapter 1: Metallic materials: Designation, properties and application</i></p> <ul style="list-style-type: none"> - General Introduction - Properties - Material classification - Classification of metals and designation - Ferrous metals (steel and cast iron) - Non-ferrous metals <p><i>Chapter 2: Elaboration of metals</i></p> <ul style="list-style-type: none"> - Introduction - Production of ferrous metals - Production of non-ferrous metals <p><i>Tutorials</i></p>	3	<p>-Enter the standard designation, properties and areas of application of ferrous and non-ferrous materials</p> <p>-Know the different processes for producing ferrous and non-ferrous metals.</p>
3-4-5	<p><i>Chapter 3: Balance diagram of binary alloys</i></p> <ul style="list-style-type: none"> - Introduction - Law of phases (Gibbs) - Binary alloy consisting of two phases in equilibrium - Alloy to a single solid solution - Two-solid solution alloy with a eutectic point - L->S cooling curve of an alloy - Cooling curve of a solid state alloy <p><i>Chapter 4: Iron-Carbon Balance Diagram</i></p> <ul style="list-style-type: none"> - Introduction - Iron Structure - Cementite balance diagram - Study of cooling of steels and cast irons <p><i>Tutorials</i></p>	4.5	<p>-Analyze equilibrium diagrams of binary alloys</p> <p>-Analyze the Iron-carbon diagram</p>
6-12	<p><i>Chapter 5: Modification of mechanical properties</i></p> <ul style="list-style-type: none"> - Introduction - Hardening by work hardening - Hardening by grain size refinement - Solid solution hardening - Structural hardening 	10.5	-Know in general the different methods of improving mechanical properties
	<p><i>Chapter 6: Heat treatment of steels</i></p> <ul style="list-style-type: none"> - Introduction - The main types of heat treatment 		-Know what heat treatment is

	<p>I- Austenization of steels</p> <ul style="list-style-type: none"> - Heating speed - Austenization temperature - Austenization time - Grain size <p>II- Isothermal transformations of steels</p> <ul style="list-style-type: none"> - Introduction - The different types of austenite transformations - Reading TTT diagrams or Iso-austenitic curves - Industrial isothermal heat treatments of steels <p>III- Anisothermal transformations of steels</p> <ul style="list-style-type: none"> - Introduction - Analysis of TRC diagrams - Residual austenite problem - Critical quenching speed <p>IV- Steel income</p> <ul style="list-style-type: none"> - Introduction - Different types of income - Evolution of properties during income <p>V- Annealing of steels</p> <ul style="list-style-type: none"> - Introduction - Different types of annealing <p>VI – Hardenability of steels</p> <ul style="list-style-type: none"> - Introduction - Factor influencing hardenability - Method for determining hardenability <p>Tutorials</p>		<p>-Know the austenization parameters</p> <p>-Analyze the anisothermal quenching process</p> <p>-Know the purpose, stages and different types of steel income</p> <p>-Know the steps and different types of steel annealing.</p> <p>-Understand the factors influencing the hardenability of steels as well as these determination methods</p>
13-14	<p>Chapter 7: Surface treatments</p> <ul style="list-style-type: none"> - Introduction - Mechanical treatment or work hardening - Quench hardening treatment after surface heating - Thermochemical treatment <p>Tutorials</p>	3	<ul style="list-style-type: none"> - Know the principle of some types of superficial treatments

3- Content elements (Practical work)

Week(s)	Activities/Content Elements	No. HR	Goals
1-2	Experimental determination of the austenitization temperature	3	- Know the austenitization parameters

3-4	<i>Material characterization and hardenability testing</i>	3	- Analyze the anisothermal quenching process - Detect the influence of tempering and annealing of steels
5-6	<i>Tempering test and recrystallization annealing</i>	3	Summative evaluation
7	<i>Practical exam, mini-project defense, ...</i>	1.5	

4- Evaluation methods & Marks Distribution

Type of assessment	Yes No	Tx Weighting
<i>CC - Continuous assessment (Test/Quiz, Presentation, Report, etc.)</i>	<input type="checkbox"/> Yes <input type="checkbox"/> No

Course Specification

Analog Electronic

1. General

Coded	<i>GELM3106</i>	Level/Semester	1/S1	Coefficient	3	Credits	4
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	21
Responsible	<i>Amira HADJ FRADJ</i>					Volume. H. (TP)	21
Module	<i>Analog electronic</i>					Version	<i>09/2023</i>

Course description (Course objective):

The Analog Electronics course aims to provide students with an in-depth understanding of the physical properties of materials in the development of electronic components and the use of these components in circuits and systems. This includes the study of electrical devices built around semiconductor technology.

Prerequisites:

- Basic knowledge of mathematics
- Prior knowledge of the basic concepts of analog electronics, such as the law of meshes, the law of nodes.

Keywords :

Semiconductor, electrical circuits, PN junction, Diode, NPN transistor,

Specific objectives of the course (OBJ_i):

- OBJ 1 :** *Understand the fundamental principle of semiconductor usage and the structure of an extrinsic N-type and P-type semiconductor.*
- OBJ 2 :** *Understand the principle of the junction diode and its structure.*
- OBJ 3 :** *Understand the basic structure of an NPN and PNP bipolar transistor and study the current-voltage characteristic in static and dynamic conditions.*

Necessary materials: (Practical work)

- Stabilized supply*
- Test plate to connect the different circuits*
- Sons*
- Ordinary diode 1N4001*

Bipolar transistor 2N2222

Zener diode

A voltmeter

A milliammeter

Resistances

Capacitors

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-4	Chapter 1: Junction diodes	6	<ul style="list-style-type: none"> • Understand the structure of a semiconductor (Electron, atom). • Understand the principle of the PN junction. • Study the current-voltage characteristic of a junction diode. • Study the different models of the diode. • Understand how a Zener diode works.
5-9	Chapter2: The bipolar transistor in static mode	7.5	<ul style="list-style-type: none"> • Understand the structure of an NPN and PNP bipolar transistor. • Know the electrical quantities associated with the transistor. • Know the different connections of transistors and study the common emitter assembly. • Trace the network of characteristics and static charge line of an NPN transistor (common emitter assembly)
10-14	Chapter 3: The bipolar transistor in dynamic mode	7.5	<ul style="list-style-type: none"> • Understand how the transistor works as a low signal amplifier. • Know the hybrid parameters of the NPN transistor. • Study the transistor equivalent diagram for small sinusoidal signals

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals
1-2	Study of a junction diode	3	<ul style="list-style-type: none"> Master in practice using an ordinary diode 1N4001 Record the current-voltage characteristic of an ordinary 1N4001 diode in the forward and reverse directions. Determine dynamic and static resistance.
3-6	Diode rectification and filtering.	6	<ul style="list-style-type: none"> Rectify an alternating voltage in single-wave mode. Study filtering using a capacitor.
7-8	The Zener diode	3	<ul style="list-style-type: none"> Record the current voltage characteristic of a Zener diode in the forward and reverse directions. Determine the dynamic resistance of a Zener diode.
9-12	Study of bipolar transistor 2N2222	6	<ul style="list-style-type: none"> Study the common emitter assembly of a 2N2222 bipolar transistor in static and dynamic conditions.
13-14	Practical exam	3	Summative evaluation

4- Evaluation methods & Marks Distribution

Type of assessment	Yes No	Tx Weighting
CC - Continuous assessment (Test/Quiz, Presentation, Report, etc.)	<input type="checkbox"/> Yes <input type="checkbox"/> No	
DS - Supervised Duty	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	20%
EE - Written test (Final exam)	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	60%
EP - Practical test (TP- TP exam / MP- Mini project)	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	20%

- Material 100% TP : Average = 20% CC + 80% EP
- 100% CI material : Average = 40% DS + 60% EE
- **CI+TP material : Average = 20% DS + 20% EP + 60% EE**

5- Evaluation criteria

- *Authorized documents* : Yes No
- *Authorized search engine* : Yes No
- *Criterion 1: Understanding of the content (4 points)*
- *Criterion 2: Application of knowledge (10 points)*
- *Criterion 3: Critical analysis (4 points)*
- *Criterion 4: Clarity and organization (2 points)*

Fluid mechanics

1. General

Coded	<i>GELM3107</i>	Level/Semester	1/S1	Coefficient	3	Credits	3
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	42
Responsible	<i>Jamel MLAOUHI</i>					Volume. H. (TP)	
Module	<i>Fluid mechanics</i>					Version	<i>09/2023</i>

Course description (Course objective):

Fluid mechanics provides an in-depth understanding of the behavior of liquids and gases in motion, with practical applications in various fields of engineering.

Prerequisites:

General mechanic. Mathematics (vector and tensor calculation, differential equations, etc.)

Keywords :

Fluid, Bernoulli, Navier-Stokes, Reynolds number

Specific objectives of the course (OBJ_i):

OBJ 1 : *Discover a first definition of a continuous medium.*

OBJ 2 : *Understand the concept of pressure and incompressible fluid, the concept of viscosity.*

OBJ 3 : *Differentiate between laminar flow and turbulent flow,*

OBJ 4 : *assimilate the notion of boundary layer, introduce the notion of Drag and Lift forces.*

Necessary material :

...

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	<i>Properties and types of fluids (liquids and gases)</i> <ul style="list-style-type: none"> - <i>Physical properties of fluids</i> - <i>Continuous media</i> - <i>Compressibility of fluids, Expansion, Density</i> - <i>Kinematic and dynamic viscosity</i> <i>Law of Newtonian fluids.</i>	6	<i>Discover a first definition of a continuous medium.</i>

Continuum mechanics MMC

1. General

Coded	<i>GELM3108</i>	Level/Semester	1/S1	Coefficient	3	Credits	4
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	42
Responsible	<i>Chokri BOURAQUI</i>					Volume. H. (TP)	
Module	<i>Continuum mechanics</i>					Version	<i>09/2023</i>

Course description (Course objective):

Continuum Mechanics aims to study the behavior of deformable materials on large scales. It deals with objects that can be modeled as continuous media, that is to say materials whose physical properties vary continuously at each point.

Prerequisites:

Linear Algebra and geometry course.

Keywords :

Mechanics of continuous media, stress, deformation, elasticity, plasticity...

Specific objectives of the course (OBJ_i):

- OBJ 1 :** *Understanding of Fundamental Concepts: Gain an in-depth understanding of fundamental concepts such as strain, stress, strain kinematics, balance of forces, and conservation laws.*
- OBJ 2 :** *- Materials Modeling: Be able to model the behavior of deformable materials as continuous media, using mathematical equations to describe relationships between material properties.*
- OBJ 3 :** *- Elastic Analysis: Understand the elastic behavior of materials, including the relationship between elastic stress and strain, as well as the determination of the elastic properties of materials.*
- OBJ 4 :** *- Study of Plasticity: Explore plasticity models to understand how materials permanently deform beyond their elastic limit.*

Necessary material :

...

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1	<i>Introduction to Tensor Calculus: (Tensor Algebra – Tensor Analysis)</i>	3	<i>Understanding of Fundamental Concepts: Gain an in-depth understanding of fundamental concepts such as strain, stress, strain kinematics, balance of forces, and conservation laws.</i>
2-3	<i>Study of deformations: (description of movement, deformation tensor, displacement fields, linearized deformation tensor, deformations and main directions)</i>	6	
4-5-6	<i>Study of constraints: (Fundamental laws of dynamics, conservation of momentum, Cauchy stress tensor, equilibrium equations, boundary conditions, constraints and principal directions)</i>	9	
7-8	<i>Behavioral laws: (generalized Hooke's law, material isotropy, experimental identification)</i>	6	<i>Material Modeling</i>
9-10-11	<i>General solution methods: (Direct method, inverse method, plane problems)</i>	9	<i>Elastic Analysis</i>
12-13-14	<i>Energy theorems: (Plastic deformation energies).</i>	9	<i>Study of Plasticity</i>

Thermic

1. General

Coded	<i>GELM3110</i>	Level/Semester	<i>1/S1</i>	Coefficient	<i>2.25</i>	Credits	<i>3</i>
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	<i>31.5</i>
Responsible	<i>Akram MAZGAR</i>					Volume. H. (TP)	
Module	<i>Thermic</i>					Version	<i>09/2023</i>

Course description (Course objective):

Master the basic concepts of the different modes of heat transfer

Prerequisites:	Keywords :
<p><i>Mathematical tools and notions of thermodynamics:</i></p> <ul style="list-style-type: none"> - <i>Differential equations ; partial derivatives; mathematical operators, integrals</i> - <i>Heat, Work, Internal energy, enthalpy</i> - <i>1st and 2nd Principle of thermodynamics</i> - <i>Dimensional analysis</i> 	<p><i>Conduction, Convection, Radiation</i></p>

Specific objectives of the course (OBJ_i):

OBJ 1 : *Study the different modes of heat transfer*

OBJ 2 : *Establish the temperature distribution in one-dimensional stationary conduction with and without internal heat dissipation (plane, cylindrical and spherical configuration)*

OBJ 3 : *Introduce the concept of electrical analogy and define the notion of thermal resistance*

OBJ 4 : *Know how to use the different correlations in forced and natural convection in order to estimate the exchange coefficient*

Necessary material :

video projector

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-3	<i>The different modes of heat transfer (Fourrier's law, Newton's law, Stefan Boltzmann's law)</i>	6	<i>Know the three modes of heat transfer (Conduction, convection and radiation)</i>
4-8	<ul style="list-style-type: none"> - <i>One-dimensional stationary conduction without internal heat dissipation</i> - <i>Concepts of electrical analogy and thermal resistance</i> 	10	<ul style="list-style-type: none"> - <i>Analyze heat transfer by conduction</i> - <i>Establish the temperature profile in a wall in the absence of an internal heat source</i> - <i>Determine the equivalent thermal resistance of a composite wall</i>
9-11	<i>One-dimensional stationary conduction with internal heat dissipation</i>	6	<i>Establish the temperature profile in a wall in the presence of an internal heat source</i>
12-14	<i>Heat transfer by convection</i>	5	<ul style="list-style-type: none"> - <i>Use the different correlations in natural and forced convection</i> - <i>Estimate the heat exchange coefficient</i>

Manufacturing processes

1. General

Coded	<i>GELM3209</i>	Level/Semester	1/S2	Coefficient	3	Credits	3
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	21
Responsible	<i>Safa Hraiech</i>					Volume. H. (TP)	21
Module	<i>Manufacturing processes</i>					Version	<i>09/2023</i>

Course description (Course objective):

Choose the optimal manufacturing process(es) to obtain a proposed mechanical part.

Prerequisites:

Engineering sciences and techniques.

Keywords :

Processes, manufacturing, machining, turning, drilling, milling, plastic deformation

Specific objectives of the course (OBJ_i):

- OBJ 1 :** *Classify the processes for obtaining mechanical parts.*
- OBJ 2 :** *Identify the processes according to the material and the production program.*
- OBJ 3 :** *Produce parts by material removal.*
- OBJ 4 :** *Analyze and interpret definition drawings*
- OBJ 5 :** *Choose machining processes to use while respecting technical and economic aspects,*
- OBJ 6 :** *Choose the cutting tools according to the different machining operations;*
- OBJ 7 :** *Position and fix the part on the available machine tools;*
- OBJ 8 :** *Choose the optimal cutting parameters.*
- OBJ 9 :** *Check dimensional, geometric and surface condition specifications.*

Necessary material :

Table, video projector, machine tool, control instruments, machining tools

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1	<ul style="list-style-type: none"> - <i>Typology of processes;</i> - <i>Classification of shaping processes;</i> 	1.5	<i>Classify the processes for obtaining mechanical parts.</i>
2-3-4	<ul style="list-style-type: none"> - <i>Identification of processes according to the material and the production program:</i> <ul style="list-style-type: none"> - <i>Production by material removal;</i> - <i>Production by adding material;</i> - <i>Production by molding;</i> - <i>Production by deformation, Stamping – Stamping, Cutting – Bending – Stamping, Thermoforming;</i> - <i>Economic aspect of the processes,</i> - <i>Identification of parameters,</i> - <i>Concept of economic performance;</i> - <i>Waste management.</i> 	4.5	<i>Identify the processes according to the material and the production program.</i>
5-6-7-8	<ul style="list-style-type: none"> - <i>Production of parts by material removal:</i> <ul style="list-style-type: none"> - <i>Analysis and interpretation of definition drawings.</i> - <i>Choice of machining processes to use while respecting technical and economic aspects:</i> <ul style="list-style-type: none"> - <i>Filing,</i> - <i>Milling,</i> - <i>Drilling.</i> 	6	<i>Produce parts by material removal.</i>
9-10	<ul style="list-style-type: none"> - <i>Positioning and fixing the part on machine tools.</i> - <i>Design of fixtures and machining and assembly jigs</i> 	3	
11-12	<ul style="list-style-type: none"> - <i>Techniques and equipment for measuring dimensional, geometric characteristics and surface conditions.</i> 	3	
13-14	<ul style="list-style-type: none"> - <i>Application exercises</i> 	3	

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals
1-2	<ul style="list-style-type: none"> - <i>Discovery of machine tools (lathe, milling machine, drill) and machining and control tools.</i> 	3h	<i>Classify the processes for obtaining mechanical parts.</i>

3-4	<ul style="list-style-type: none"> - Carrying out simple operations on a tower - Getting started with the machine - Straightening and carriage - Control with caliper 	3h	<i>Produce parts by material removal.</i>
5-6	<ul style="list-style-type: none"> - Carrying out simple operations on a milling machine - Getting started with the machine - Surfacing - Control with caliper 	3h	
7-8	<ul style="list-style-type: none"> - Drilling on a drill - Small diameter - Large diameter using a pilot hole 	3h	
9-10	<ul style="list-style-type: none"> - Practical exercise on a piece of revolution with several operations 	3h	
11-12	<ul style="list-style-type: none"> - Practical exercise on a prismatic part with several operations 	3h	
13-14	<ul style="list-style-type: none"> - Practical machining examination of the 2 machined parts 	3h	

4- Evaluation methods & Marks Distribution

Type of assessment	Yes No	Tx Weighting
<i>CC - Continuous assessment (Test/Quiz, Presentation, Report, etc.)</i>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
<i>DS - Supervised Duty</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	20%
<i>EE - Written test (Final exam)</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	60%
<i>EP - Practical test (TP- TP exam / MP- Mini project)</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	20%

- **Material 100% TP** : Average = 20% CC + 80% EP
- **100% CI material** : Average = 40% DS + 60% EE
- **CI+TP material** : **Average = 20% DS + 20% EP + 60% EE**

5- Evaluation criteria

- *Authorized documents* : Yes No
- *Authorized search engine* : Yes No
- *Criterion 1: choice of machine tool (3 points)*
- *Criterion 2: choice of tools (3 points)*

- *Criterion 3: operating mode (4 points)*
- *Criterion 4: accuracy of dimensions (10 points)*

Course Specification

Electrotechnics

11- General

Coded	GELM3203	Level/Semester	1/S2	Coefficient	2.5	Credits	3
Course	Electromechanical Engineering					Volume. H. (CI)	21
Responsible	Slah FARHANI					Volume. H. (TP)	14
Module	Electrotechnics					Version	09/2023

Course description (Course objective):

Allow the student to acquire basic knowledge on the quantities relating to alternating current and three-phase systems as well as alternating / alternating conversion via single-phase and three-phase transformers and to understand the constitutions of electrical machines, their operations and their characteristics . The student must know the criteria for choosing the suitable motor to drive a mechanical system.

Prerequisites:	Keywords :
Basic electrical circuits	<i>Electrical network, Power, power factor, compensation, electromagnetism, electrical machines</i>

Specific objectives of the course (OBJ_i):

- OBJ 1 :** *Analyze single-phase and three-phase, balanced and unbalanced electrical circuits.*
- OBJ 2 :** *Analyze the operation of iron-core coils as well as single-phase and three-phase transformers.*
- OBJ 3 :** *Learn the principles of electromechanical energy transformation.*

Necessary material :

Single-phase and three-phase alternating network, single-phase and three-phase loads (resistive, inductive and capacitive), measuring devices (voltmeter, ammeter, wattmeter), single-phase and three-phase transformer, rotating electrical machines (direct current machine, asynchronous machine, synchronous machine)

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	Calculation of single-phase powers	3	Understand alternative quantities (voltages, currents, impedances), powers, power factor compensation.
3-4	Calculation of three-phase powers	3	Understand alternative quantities (voltages, currents, impedances), powers, power factor compensation.
5-6	Single-phase transformer	3	Understand the operation and constitution of an iron core coil, no-load transformer, loaded transformer, study of the transformer with Kapp's hypothesis, voltage drop, efficiency.
7-8	Three-phase transformer	3	Study the constitution of a three-phase transformer, the couplings, the hourly index, equivalent diagram and efficiency.
9-14	Rotating electrical machines	9	- Study the operation of rotating electrical machines (direct current machines and alternating current machines), power balance, efficiency, torque/speed characteristics.

3- Content elements (Practical work)

Week(s)	Activities/Content Elements	No. HR	Goals
1-3	Single-phase power measurements	3	- Allow the student to manipulate the wattmeter to measure the active, reactive and apparent powers of an industrial electrical installation in sinusoidal alternating

			<p>regime.</p> <p>- Know how to reduce voltage drops and power losses across power transmission lines, by improving the power factor.</p>
4-6	Three-phase power measurements (delta coupling and star coupling)	3	<p>- Allow the student to manipulate the wattmeter to measure the active, reactive and apparent powers of an industrial electrical installation in sinusoidal alternating mode.</p> <p>- Know how to reduce voltage drops and power losses across power transmission lines, by improving the power factor.</p>
7-9	Study of the single-phase transformer	3	<p>-Study the no-load and load operation of a single-phase transformer by measuring its voltage drop and determining its efficiency</p> <p>- Empty test</p> <p>- Short circuit test</p> <p>-Load test.</p>
10-12	Study of rotating machines (direct current, asynchronous, synchronous)	3	Understand how the machine works, no-load test, load test.
13-14	Practical exam	2h	Summative evaluation

4- Evaluation methods & Marks Distribution

Type of assessment	Yes No	Tx Weighting
CC - Continuous assessment (Test/Quiz, Presentation, Report, etc.)	<input type="checkbox"/> Yes <input type="checkbox"/> No	
DS - Supervised Duty	x Yes <input type="checkbox"/> No	20%
EE - Written test (Final exam)	x Yes <input type="checkbox"/> No	60%
EP - Practical test (TP- TP exam / MP- Mini project)	x Yes <input type="checkbox"/> No	20%

- Material 100% TP : Average = 20% CC + 80% EP
- 100% CI material : Average = 40% DS + 60% EE
- **CI+TP material : Average = 20% DS + 20% EP + 60% EE**

5- Evaluation criteria

- *Authorized documents* : Yes x *No*
- *Authorized search engine* : Yes x *No*
- *Criterion 1: Understanding of the content (4 points)*
- *Criterion 2: Application of knowledge (10 points)*
- *Criterion 3: Critical analysis (4 points)*
- *Criterion 4: Clarity and organization (2 points)*

6- Web references (useful links):

Course Specification

Signal processing

1. General

Coded	<i>GELM3204</i>	Level/Semester	1/S2	Coefficient	2.5	Credits	3
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	18
Responsible	<i>Hassani MESSOUD</i>					Volume. H. (TP)	12
Module	<i>Signal processing</i>					Version	09/2023

Course description (Course objective):

Understand and assimilate the notion of signal as a carrier of information and energy as well as the different tools relating to the processing of this signal in particular its power and therefore its energy, its dependence on its past and the past of other signals known as correlation as well as the transmission of this signal in its analog form or after its digitization via sampling.

Prerequisites:	Keywords :
<i>Mathematics for engineers</i>	<i>Signal, Energy, spectrum, correlation, spectral density , modulation, demodulation</i>

Specific objectives of the course (OBJ_i):

- OBJ 1 :** *Understand the concept of signal as a carrier of information in the form of a given energy*
- OBJ 2 :** *Understand the characteristics of the signal in particular its spectrum, its correlation, its spectral density,*
- OBJ 3 :** *Understand the techniques for transmitting this signal in both analog and digital form.*

Necessary material :

Hardware

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. _ HR	Goals
---------	------------------------	-------------	-------

1-2	<p>Chapter 1: Introduction to Signals</p> <ul style="list-style-type: none"> - Notion of signal: Definition, Example, usual signals, instantaneous power of a signal, average power, energy, interaction energy, etc. - Exercises 	3	<p>OB1: Understand the concept of signal as a source of energy</p>
3-5	<p>Chapter 2: Characteristics of a signal</p> <ul style="list-style-type: none"> - Spectrum of a signal <ul style="list-style-type: none"> • Case of periodic signals • Case of non-periodic signals • Amplitude spectrum and phase spectrum • Energy and frequency power • Parseval 's theorem • Spectral density - Exercises 	4.5	<p>OB2: Understand the correspondence between the temporal description and the frequency description of a signal</p>
6-7	<ul style="list-style-type: none"> - Correlation of a signal <ul style="list-style-type: none"> • Autocorrelation • Intercorrelation • Link between energy and correlation • Spectral density and correlation - Exercises 	3	<p>OB2: Understand the notion of correlation which expresses the dependence of the signal either on its past or on the past of other signals</p>
8-9	<p>Chapter 3: Sampling a signal</p> <ul style="list-style-type: none"> - Concept of sampling - Spectrum of the sampled signal - Sampling period and Shannon's theorem - Reconstruction of a signal - Exercises 	3	<p>OB3: Understand the digitization of a signal with a view to its digital transmission as well as its reconstitution at the receiver level</p>
10-14	<p>Chapter 4: Transmission of a signal</p> <ul style="list-style-type: none"> - Modulating a signal <ul style="list-style-type: none"> • Amplitude modulation • Frequency modulation • Phase modulation - Demodulation of a signal <ul style="list-style-type: none"> • Amplitude demodulation • Frequency demodulation - Exercises 	7.5	<p>OB3: Popularize the notion of transmission and reception of a signal</p>

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. _ HR	Goals
---------	--------------------------	----------	-------

1	TP1: Temporal and frequency study of periodic deterministic signals	3	OB1 & OB2: Handle the matlab software Tracing a periodic signal Signal spectrum tracing
2	TP2: Temporal study and frequency of signals non-periodic determinists	3	OB1 & OB2: Tracing a non-periodic signal Plotting the Fourier Transform Signal spectrum tracing Shifted spectrum representation
3	TP3: Sampling and reconstruction	3	OB3: Study of ideal sampling and real sampling Reconstruction by zero-order blocker Reconstruction by linear interpolation
4	TP4: Modulation and demodulation of a signal	3	OB3: Representation of an amplitude, frequency and phase modulated signal and demodulation of an amplitude modulated signal

4- Evaluation methods & Marks Distribution

Type of assessment	Yes No	Tx Weighting
CC - Continuous assessment (Test/Quiz, Presentation, Report, etc.)	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No

Mechanical engineering

1. General

Coded	<i>GELM3206</i>	Level/Semester	1/S2	Coefficient	1.5	Credits	2
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	
Responsible	<i>Safa HRAIECH</i>					Volume. H. (TP)	21
Module	<i>Mechanical design</i>					Version	<i>09/2023</i>

Course description (Course objective):

The mechanical design office aims to study the movement and behavior of objects, as well as the forces that influence them.

Prerequisites:

Engineering Sciences and Techniques; Mechanical concept

Keywords :

Bending, buckling, friction, crank rod...

Specific objectives of the course (OBJ_i):

OBJ 1 : Allow the student to exploit their knowledge in engineering sciences by carrying out practical work.

Necessary material :

Torsion analysis test bench, Friction test bench, Buckling test bench, Bending test bench, Torsion test bench

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals
1.2	<i>friction</i>	3	<i>Identify and experimentally measure the friction coefficients of different materials</i>
3-4	<i>Flexion</i>	3	<i>Measure displacements under the action of bending forces and determine the characteristics of the material</i>

5-6	TP Torsion	3	Measure distortion under the action of torsional torques and determine the characteristics of the material
7-8	Torsor Modeling TP	3	Know how to experimentally model a torso of mechanical actions
9-10	TP Flambage	3	Experimentally determine the critical buckling force
11-12	Kinematics (Connecting Rod Crank)	3	Know how to graphically determine the speeds and accelerations of a system
13-14	Practical exam, mini-project defense, ...	3h	Summative evaluation

4- Evaluation methods & Marks Distribution

Type of assessment	Yes No	Tx Weighting
CC - Continuous assessment (Test/Quiz, Presentation, Report, etc.)	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	20%
DS - Supervised Duty	<input type="checkbox"/> Yes <input type="checkbox"/> No	
EE - Written test (Final exam)	<input type="checkbox"/> Yes <input type="checkbox"/> No	
EP - Practical test (TP- TP exam / MP- Mini project)	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	80%

- **Material 100% TP : Average = 20% CC + 80% EP**

Certification Preparing CAO 1

1. General

Coded	<i>GELM3207</i>	Level/Semester	1/S2	Coefficient	1.5	Credits	2
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	
Responsible	<i>Maher ELTAIEF</i>					Volume. H. (TP)	21
Module	Preparing for CAD certification 1					Version	09/2023

Course description (Course objective):

Course description:

SOLIDWORKS certifications accurately assess knowledge and expertise with SOLIDWORKS software.

The program establishes an industry standard by which SOLIDWORKS professionals are evaluated through a comprehensive, unbiased test of their SOLIDWORKS knowledge in the areas of mechanical design and design validation. With this certification, you position yourself as a highly competent SOLIDWORKS professional. Recruiters can feel confident in their decision to hire a certified candidate, reducing the time it takes to onboard a new team member.

Prerequisites:

Computer tools, technical drawing rules, mechanical design.

Keywords :

CSWA, SOLIDWORKS Getting Started

Specific objectives of the course (OBJ_i):

OBJ 1 : *Master the SOLIDWORKS “sketch” tool;*

OBJ 2 : *Master the SOLIDWORKS “Function” tool and design parts;*

OBJ 3 : *Master the SOLIDWORKS “Assembly” tool and create systems;*

OBJ 4 : *Master the SOLIDWORKS “Drawing” tool;*

Necessary material :

Painting ; Video projector ; computer laboratory; SOLIDWORKS software

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2
3-4
...
11-12			

3- Content elements (Practical work)

Week(s)	Activities/Content Elements	No. HR	Goals
1-2	<i>SOLIDWORKS Interface</i>	3	<p><i>Recognize the “Draw” tools; “quotation”, “modification”</i></p> <p><i>Using sketch relationships.</i></p> <p><i>Recognize the functions of adding material by: Extrusion, revolution, sweeping, smoothing...)</i></p> <p><i>Recognize the removal functions of the material by: extrusion, revolution, scanning, smoothing, etc.)</i></p>
3-4	<i>Sketch representation (part 1)</i>	3	<i>Create sketch entities (lines, rectangles, circles, arcs, ellipses, construction lines); Create sketch tools (offset, conversion, adjustment); Add sketch relationships;</i>
5-6	<i>Representation of sketches (part 2)</i>	3	<i>Master entities, tools and sketch relationships through application exercises</i>
7-8	<i>Application of functions and representation of 3D parts</i>	3	<p><i>Carry out bossing and material removal functions (extrusions, revolutions, sweeps, smoothing); Fillets and chamfers; Linear, circular and zone repetitions;</i></p> <p><i>Develop the conditions of the functions (start and end); Development of mass and material properties;</i></p> <p><i>Master the function tools through application exercises</i></p>
9-10	<i>Making the assemblies</i>	3	<i>Insert components by standard constraints (coincident, parallel, perpendicular, tangent, concentric, distance, angle); Use reference geometry (planes, axes, constraint references) ;</i>

			<i>Master assembly tools through application exercises.</i>
11-12	<i>Creation of drawings</i>	3	<i>Prepare the cartridges;</i> <i>Create overall drawings; Insert the nomenclature;</i> <i>Produce definition drawings;</i> <i>Insert sectional, detailed, local sectional views, etc.;</i> <i>Insert geometric constraints and roughness;</i> <i>insert annotations.</i>
13-14	<i>Practical exam</i>	3	<i>Summative evaluation</i>

Mechanical Design 2

1. General

Coded	GELM3206	Level/Semester	1/S2	Coefficient	1.5	Credits	2
Course	Electromechanical Engineering					Volume. H. (CI)	21
Responsible	Maher ELTAIEF					Volume. H. (TP)	
Module	Mechanical Design 2					Version	09/2023

Course description (Course objective):

Course description:

Movement transformation mechanisms are mechanisms that modify the type of movement between the leading organ and the driven organ.

The transformation of movement is a complex mechanical function , since it is carried out by a mechanism , or a set of components. It modifies the type of movement of one component of the mechanism in relation to another. Thus, a rotational movement of the driving member can cause a rectilinear translation movement in the driven member . The reverse is also possible.

Prerequisites:	Keywords :
<i>Mathematical tools (vector- Torseur, etc.); Translation guidance- Rotation guidance- Bearing assembly- Mechanical connections</i>	<i>Equivalent Links- Motion Transformation System.</i>

Specific objectives of the course (OBJ_i):

- OBJ 1 :** *Establish the connection graph of a mechanism;*
- OBJ 2 :** *Establish the kinematic diagram of a mechanism;*
- OBJ 3 :** *Determine the equivalent bond; calculate the degree of mobility and hyperstatism of a mechanism;*
- OBJ 4 :** *Study and analyze the crank rod system.*
- OBJ 5 :** *Study and analyze the screw-nut system;*
- OBJ 6 :** *Study and analyze the cam and eccentric system;*
- OBJ 7 :** *Study and analyze the rack and pinion system.*

Necessary material :

Painting ; Video projector.

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-4	<i>Chapter 1: Concept on the theory of mechanism</i>	6	<p><i>Define the static and kinematic twists of the connections;</i></p> <p><i>Make the connection graph; Create the kinematic diagram</i></p> <p><i>Determine the equivalent connection for parallel and series associations.</i></p> <p><i>Study a closed continuous chain mechanism, calculate the degree of mobility and hyperstatism;</i></p> <p><i>Tutorials.</i></p>
5-6	<i>Chapter 2: Study of a connecting rod crank system</i>	4.5	<p><i>Design and size a crank rod system; Establish the kinematic diagram;</i></p> <p><i>Calculate the degree of mobility and hyperstatism;</i></p> <p><i>Study reversibility;</i></p> <p><i>Establish mechanisms based on connecting rod crank</i></p> <p><i>Tutorials</i></p>

7-9	<p><i>Chapter 3: Study of a screw-nut system</i></p> <p><i>Tutorials</i></p>	4.5	<p><i>Design and size a screw-nut system; Establish the kinematic diagram;</i></p> <p><i>Calculate the degree of mobility and hyperstatism;</i></p> <p><i>Study reversibility;</i></p> <p><i>Design screw-nut based mechanisms.</i></p> <p><i>Master the screw-nut technology solution.</i></p>
10-11	<p><i>Chapter 4: Study of a cam and eccentric system</i></p>	3	<p><i>Design and dimension a cam and eccentric system; Establish the kinematic diagram;</i></p> <p><i>Calculate the degree of mobility and hyperstatism;</i></p> <p><i>Study reversibility;</i></p> <p><i>Establish cam-based and eccentric mechanisms</i></p> <p><i>Tutorials</i></p>
13-14	<p><i>Chapter 5: Study of a rack and pinion system</i></p>	3	<p><i>Design and size a rack and pinion system; Establish the kinematic diagram;</i></p> <p><i>Study reversibility;</i></p> <p><i>Establish rack and pinion based mechanisms</i></p> <p><i>Tutorials</i></p>

Course description (Course objective):

Quality, Certification and Standards is a training course that aims to provide participants with an in-depth understanding of quality management principles, certification processes and associated standards .

Prerequisites:

Probability and statistics

Keywords :

Standard, quality, certification, ISO, QMS

Specific objectives of the course (OBJ_i):

- OBJ 1 :** *Understand and implement the process approach in a company as part of a quality approach or a QSE approach (Quality, Safety, Environment)*
- OBJ 2 :** *Understand and use ISO 9001 and the main ISO 9000 standards*
- OBJ 3 :** *Master problem solving tools*
- OBJ 4 :** *Know the main continuous improvement methods and tools*

Necessary material :

...

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	<p>Quality management :</p> <p><i>Introduction to basic quality concepts.</i></p> <p><i>Principles of quality management according to models such as ISO 9001.</i></p> <p><i>Continuous process improvement methods.</i></p>	4.5	<i>Understand and use ISO 9001 and the main ISO 9000 standards</i>

3-4-5	<p>Quality Standards: Exploring international quality management standards. Examination of standards specific to the industry or sector of activity concerned. Application of standards to guarantee the quality of products or services.</p>	6.75	<p>Understand and implement the process approach in a company as part of a quality approach or a QSE approach (Quality, Safety, Environment)</p>
6-7-8	<p>Certificate : Understanding of certification processes. Study of certification bodies and their roles. Certification preparation for businesses or professionals.</p>	6.75	
9-10-11	<p>Quality Management Systems (QMS): Development and implementation of a QMS compliant with current standards. Internal and external audit to ensure compliance with quality standards. Management of documents and records linked to quality.</p>	6.75	
12-13-14	<p>Practical Cases and Case Studies: Application of concepts learned through concrete case studies. Resolving quality issues. Simulations of audits and certification processes.</p>	6.75	

4- Evaluation methods & Marks Distribution

Type of assessment	Yes No	Tx Weighting
CC - Continuous assessment (Test/Quiz, Presentation, Report, etc.)	<input type="checkbox"/> Yes <input type="checkbox"/> No	
DS - Supervised Duty	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	40%
EE - Written test (Final exam)	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	60%
EP - Practical test (TP- TP exam / MP- Mini project)	<input type="checkbox"/> Yes <input type="checkbox"/> No	

- Material 100% TP : Average = 20% CC + 80% EP
- **100% CI material** : **Average = 40% DS + 60% EE**
- CI+TP material : Average = 20% DS + 20% EP + 60% EE

5- Evaluation criteria

- Authorized documents : Yes No
- Authorized search engine : Yes No
- Criterion 1: Understanding of the content (4 points)
- Criterion 2: Application of knowledge (10 points)
- Criterion 3: Critical analysis (4 points)
- Criterion 4: Clarity and organization (2 points)

6- Web references (useful links):

Course Specification

CAO electrical systems

1. General

Coded	<i>GELM3205</i>	Level/Semester	1/S2	Coefficient	1.5	Credits	2
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	
Responsible	<i>Kais BOUZRARA</i>					Volume. H. (TP)	21
Module	<i>CAD electrical systems</i>					Version	<i>09/2023</i>

Course description (Course objective):

Handle electrical circuit editing and simulation software. Master the preparation of printed circuits.

Prerequisites:

Basic notions of electronics

Keywords :

ISIS, ARES, Arduino,...

Specific objectives of the course (OBJ_i):

OBJ 1 : *Getting to know ISIS and ARES*

OBJ 2 : *Design and simulation of a stabilized power supply*

OBJ 3 : *Become familiar with the ARDUINO board programming environment*

OBJ 4 : *Know how to program and simulate the operation of certain motors*

Necessary material :

Computer

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2
3-4
...
11-12			

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals
1-2	Introduction to Proteus Software (ISIS) : familiarization with the tools for schematizing electronic assemblies	3h	Getting to Know ISIS
3-4	Introduction to Proteus Software (ARES): familiarization with electronic assembly routing tools	3h	Getting to know ARES
5-6	Simulation and routing of a stabilized power supply : Enter a stabilized 12V power supply under ISIS and its routing via ARES in order to obtain its printed circuit	3h	Design and simulation of a stabilized power supply
7-8	Introduction to the ARDUINO card and its development environment: Presentation of the ARDUINO UNO card with its IDE by introducing the programming instructions through validation with examples	3h	Become familiar with the ARDUINO board programming environment
9-12	Simulation of a motor control card (DC and stepper) based on the ARDUINO UNO card: Program the operation of a DC motor and a stepper motor using the IDE ARDUINO and simulation of operation under ISIS	6am	Know how to program and simulate the operation of certain motors
13-14	Practical exam	3h	Summative evaluation

4- Evaluation methods & Marks Distribution

Type of assessment	Yes No	Tx Weighting
CC - Continuous assessment (Test/Quiz, Presentation, Report, etc.)	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	20%
DS - Supervised Duty	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	

<i>EE - Written test (Final exam)</i>	<input type="checkbox"/> Yes	<input checked="" type="checkbox"/> No	
<i>EP - Practical test (TP- TP exam / MP- Mini project)</i>	<input checked="" type="checkbox"/> Yes	<input type="checkbox"/> No	80%

- **Material 100% TP : Average = 20% CC + 80% EP**
- *100% CI material : Average = 40% DS + 60% EE*
- *CI+TP material : Average = 20% DS + 20% EP + 60% EE*

5- Evaluation criteria

- *Authorized documents : Yes No*
- *Authorized search engine : Yes No*
- *Criterion 1: Understanding of the content (4 points)*
- *Criterion 2: Application of knowledge (10 points)*
- *Criterion 3: Critical analysis (4 points)*
- *Criterion 4: Clarity and organization (2 points)*

Metal Structures and Welding Processes

1. General

Coded	<i>GELM3210</i>	Level/Semester	1/S2	Coefficient	1	Credits	1
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	
Responsible	<i>Mahdi HADJ SALAH</i>					Volume. H. (TP)	14
Module	<i>Metal Structures and Welding Processes</i>					Version	09/2023

Course description (Course objective):

Understand welding processes.

Prerequisites:

- Technology 1
- Technology 2

Keywords :

Welding, oxyacetylene welding, MIG, MAG, TIG, etc.

Specific objectives of the course (OBJ_i):

At the end of this module, the student must be able to:

OBJ 1 : Understand welding processes.

OBJ 2 : Choose the appropriate assembly technique and process .

OBJ 3 : Define the parameters and the process for carrying out the appropriate technique .

Necessary material :

Two (2) coated electrode welding stations and one oxyacetylene welding station.

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2
3-4
...

11-12			
-------	--	--	--

3- Content elements (Practical work)

Week(s)	Activities/Content Elements	No. HR	Goals
1-3	<i>Health and safety: Safety in the welding workshop</i>	3h	<i>See dangers and solutions in the welding shop</i>
4-6	<i>The practical work concerns the use of different welding techniques</i>	3h	<i>Make a longitudinal track (or cord) on a sheet of metal by executing a rapid linear movement</i>
7-9	<i>Production of plan assemblies</i>	3h	<i>Create an assembly of the two sheets (planar assembly) with a slightly balanced advance mode and by melting the metal over the entire thickness</i>
9-12	<i>Making corner assemblies</i>	3h	<i>Create an assembly of the two sheets (corner assembly) with a slightly balanced advance mode and by melting the metal over the entire thickness</i>
13-14	<i>Practical exam</i>	2h	<i>Summative evaluation</i>

4- Evaluation methods & Marks Distribution

Type of assessment	Yes No	Tx Weighting
<i>CC - Continuous assessment (Test/Quiz, Presentation, Report, etc.)</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	20%
<i>DS - Supervised Duty</i>	<input type="checkbox"/> Yes <input type="checkbox"/> No	
<i>EE - Written test (Final exam)</i>	<input type="checkbox"/> Yes <input type="checkbox"/> No	
<i>EP - Practical test (TP- TP exam / MP- Mini project)</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	80%

- **Material 100% TP : Average = 20% CC + 80% EP**
- **100% CI material : Average = 40% DS + 60% EE**
- **CI+TP material : Average = 20% DS + 20% EP + 60% EE**

5- Evaluation criteria

- *Authorized documents* : Yes No

- *Authorized search engine* : Yes No
- *Criterion 1: Understanding of the content (4 points)*

RDM

1. General

Coded	<i>GELM3211</i>	Level/Semester	1/S2	Coefficient	2.25	Credits	3
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	31.5
Responsible	<i>Imed KHEMILI</i>					Volume. H. (TP)	-
Module	<i>Strength of materials</i>					Version	09/2023

Course description (Course objective):

Acquire basic knowledge of material resistance.

Study the resistance of beams and structures in order to determine or verify their dimensions capable of supporting the loads applied to them in acceptable safety conditions with a minimum of cost.

Prerequisites:	Keywords :
Static	<i>Beam, Force, constraint, solicitation, law of behavior, resistance condition, resistance criterion,</i>

Specific objectives of the course (OBJ_i):

OBJ 1 : *Determination of the nature of the stress from the cohesion torso.*

OBJ 2 : *Application of the law of behavior to deduce the state of deformations from the state of stresses and vice versa*

OBJ 3 : *Sizing of beams subjected to simple and compound stresses.*

Necessary material :

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1	<i>Chapter 1: Basic Concepts</i>	2.25	<i>Reminder on the calculation of forces and</i>

	<ul style="list-style-type: none"> - Introduction to RDM (Basic Objectives and Assumptions) - Modeling of mechanical actions (Concept of force and moment) - Fundamental principle of statics - Torsor of internal forces (torsor of cohesion) - Correction of a series of exercises 		<p><i>moments and application of the PFS.</i></p> <p><i>Determination of the nature of the stress from the cohesion torso.</i></p>
2-3	<p><i>Chapter 2: Studies of stresses and deformations</i></p> <ul style="list-style-type: none"> ▪ Study of constraints - Constraint around a point, normal and tangential constraints - Principal constraints, principal faces and principal directions - Plane elasticity: determination of stresses and principal directions by calculation and by the graphic construction of Mohr. - Resistance condition: Resistance criteria, safety coefficient, stress concentration, - Correction of a series of exercises 	4.5	<p><i>Determination of principal directions and principal constraints. Case of plane elasticity.</i></p>
4-5	<ul style="list-style-type: none"> ▪ Study of deformations: - Displacement and deformation around a point (of unit elongation or expansion and distortion or sliding) - Main deformations and directions, - Plane deformations - Correction of a series of exercises 	4.5	<p><i>Determination of principal directions and principal deformations.</i></p>
	<ul style="list-style-type: none"> ▪ Behaviour law - Elementary Hooke's law relating to normal and tangential stresses - Generalized Hooke's law (in plane elasticity and in space) - Special problems of elasticity (plane stresses and plane strains) - Correction of a series of exercises 		<p><i>Application of the law of behavior to deduce the state of deformations from the state of stresses and vice versa.</i></p>
6	<p><i>Chapter 3: Studies of simple stresses: Traction - simple compression.</i></p> <ul style="list-style-type: none"> - Study of deformations (tensile test, longitudinal and transverse deformations) - Resistance condition - Rigidity condition. 	2.25	<p><i>Sizing of beams subjected to simple tension or compression.</i></p>

	<ul style="list-style-type: none"> - <i>Case of thin envelopes</i> - <i>Composites</i> - <i>Simple compression</i> - <i>Correction of a series of exercises</i> 		
7	<p><i>Chapter 4: Studies of simple stresses: Simple shear.</i></p> <ul style="list-style-type: none"> - <i>Shear modeling (shear test)</i> - <i>Study of deformations and stresses</i> - <i>Resistance condition</i> - <i>Calculation examples (determination of the diameter of a nail, verification of a pin, determination of a glued connection, connection by welding)</i> - <i>Correction of a series of exercises</i> 	2.25	<i>Sizing of beams loaded with simple shear.</i>
8-9	<p><i>Chapter 5: Studies of simple stresses: Simple torsion.</i></p> <ul style="list-style-type: none"> - <i>Study of deformations (torsion test) and stress distribution in a straight section</i> - <i>Polar quadratic moment</i> - <i>Deformation equation, stiffness condition, torsional stress</i> - <i>Resistance condition</i> - <i>Correction of a series of exercises</i> 	4.5	<i>Sizing of beams subjected to simple torsion.</i>
10-11	<p><i>Chapter 6: Studies of simple stresses: Simple bending.</i></p> <ul style="list-style-type: none"> - <i>Quadratic moment of a section</i> - <i>Normal stresses</i> - <i>Resistance condition</i> - <i>Bending deformation (Deformation equation, Arrow at a point)</i> - <i>Principle of superposition</i> - <i>Correction of a series of exercises</i> 	4.5	<i>Sizing of beams subjected to simple bending.</i>
12-14	<p><i>Chapter 7: Studies of Composite solicitations.</i></p> <ul style="list-style-type: none"> - <i>Principle of superposition</i> - <i>Resistance criteria (Rankine, Tresca, Von-Mises)</i> - <i>Flexion-traction, Flexion-compression (normal stresses, critical section and resistance condition)</i> - <i>Flexion-Torsion (maximum stresses, resistance condition according to Rankine, according to</i> 	6.75	<i>Sizing of beams subject to combined stresses.</i>

	<p><i>Tresca and according to Von-Mises: concept of ideal moments of bending and torsion)</i></p> <ul style="list-style-type: none"> - <i>Traction – Twist; Tension Shear</i> - <i>Twist – Shear</i> - <i>Deviated flexion</i> - <i>Correction of a series of exercises</i>

Servicing and regulation

1. General

Coded	<i>GELM4104</i>	Level/Semester	2/S3	Coefficient	3	Credits	3
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	21
Responsible	<i>Tarek GARNA</i>					Volume. H. (TP)	21
Module	<i>Servicing and regulation</i>					Version	09/2023

Course description (Course objective):

servo systems and the synthesis of correctors.

Prerequisites:

Basic notions of mathematics for the engineer

Keywords :

Transfer function, Bode diagram, PID corrector.

Specific objectives of the course (OBJ_i):

OBJ 1 : *Open-loop linear systems analysis*

OBJ 2 : *Study of controlled systems*

OBJ 3 : *Summary of PID type correctors*

Necessary material :

...

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	<i>General information on regulation and control</i>	3H	<i>Introduce the principles of control and regulation</i>
3-5	<i>Temporal and frequency study of linear systems</i>	4.5H	<i>Calculation and representation of time responses and frequency diagrams</i>
6-8	<i>Performance of servo systems</i>	4.5H	<i>Analysis of stability, precision and response time</i>

9-12	<i>Synthesis of analog correctors</i>	6H	<i>Analog correctors and Ziegler-Nichols method</i>
------	---------------------------------------	----	---

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals
1-4)	<i>TP No. 1: Introduction to Matlab</i>	6 a.m.	<i>Become familiar with the syntax of the language and the different elementary operations as well as the basic functions used in Matlab.</i>
5-8)	<i>TP No. 2: Temporal and frequency study of elementary systems using Matlab software</i>	6 a.m.	<i>Using Matlab to study first and second order systems</i>
9-10)	<i>TP No. 3: Simulation of systems using Matlab-Simulink software</i>	3 H	<i>Become familiar with the Simulink tool</i>
11-12	<i>TP No. 4: PID (Proportional Integral Derivative) corrector</i>	3 H	<i>Summary of a PID corrector</i>
13-14	<i>Practical exam, mini-project defense, ...</i>	3 H	<i>Summative evaluation</i>

4- Evaluation methods & Marks Distribution

Type of assessment	Yes No	Tx Weighting
<i>CC - Continuous assessment (Test/Quiz, Presentation, Report, etc.)</i>	<input type="checkbox"/> Yes <input type="checkbox"/> No

Reliability Control / GMAO

1. General

Coded	<i>GELM4111</i>	Level/Semester	2/S3	Coefficient	3	Credits	3
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	21
Responsible	<i>Imed KHEMILI</i>					Volume. H. (TP)	21
Module	<i>Reliability control / GMAO</i>					Version	<i>09/2023</i>

Course description (Course objective):

Acquire basic knowledge of system reliability, maintenance, availability and safety .

Prerequisites:

Concepts of probability laws and statistics

Keywords :

Random variable, Mathematical expectation, Poisson law, exponential law,

Specific objectives of the course (OBJ_i):

OBJ 1 : *Understand how the Maintenance service works regarding equipment monitoring*

OBJ 2 : *Modeling the behavior of equipment according to its lifespan distribution using reliability laws.*

OBJ 3 : *Determination of the maintainability of repairable systems, their average repair times as well as their average availability.*

Necessary material :

CMMS software

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	<i>Reliability of non-repairable components:</i> - <i>Classification of equipment (Fatigue and wear equipment: concept of failure rate)</i>	3	<i>Modeling the behavior of equipment according to its lifespan</i>

	<ul style="list-style-type: none"> - Reliability parameters and relationships between them - Reliability models: exponential and Weibull: Calculation of reliability and average lifespan (MTBF). - Determination of reliability model parameters: Graphical method and maximum likelihood technique. 		distribution using reliability laws.
3-4	<ul style="list-style-type: none"> - Development of the graphic method (operation and operating practice) and the maximum likelihood technique. - Correction of a series of exercises. 	3	Determination of reliability model parameters from a sample of measurements.
5-6	<p><i>Reliability of non-repairable systems.</i></p> <ul style="list-style-type: none"> - Serial systems - Parallel systems - "Stand by" systems - Concept of redundancy (Optimization and general form) - Correction of a series of exercises 	3	Calculation of system reliability and their average lifespan
7-8	<p><i>Reliability of repairable systems.</i></p> <ul style="list-style-type: none"> - Maintainability - Mean Time to Repair (MTTR) - Average availability <p><i>Fixed a series of exercises.</i></p>	3	Determination of the maintainability of repairable systems, their average repair times as well as their average availability.
9-12	<p><i>Global approach to reliability using Markov chains.</i></p> <ul style="list-style-type: none"> - Stochastic process. - Markov chains (graphical and matrix representation). - State probability vector - Regular stochastic matrices. - Typology of states (absorbing and transient) - Probability of absorption - Waiting time before absorption - Application to reliability 	6	Calculation of the probability of proper operation and failure and calculation of lifespan in a space of discretized states and times.
13-14	Correction of a series of exercises	3	

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals
1-4	<p><i>TP 1: Equipment and personnel management</i></p> <ul style="list-style-type: none"> - <i>Creation of the database (company, sectors and divisions, cost centers, equipment, articles)</i> - <i>Creation of personnel (the participants, their data, their families, their roles, etc.)</i> 	6	<i>Understand the hierarchical structure of a production company and create its Tree Structure.</i>
5-6	<p><i>TP2: Management of corrective work</i></p> <ul style="list-style-type: none"> - <i>Intervention request (DI)</i> - <i>Taking into account the DI</i> - <i>Conversion to Work Order (BT)</i> - <i>BT planning</i> - <i>Activities on BT</i> - <i>Closure of BT</i> - <i>Intervention report (cost calculation)</i> - <i>Fault Tree)</i> 	3	<i>Understand the process of handling failures and corrective interventions.</i>
7-8	<p><i>TP3: Management of preventive work</i></p> <ul style="list-style-type: none"> - <i>Creation of preventive ranges</i> - <i>Creation of counters (km or per hour)</i> - <i>Creation of Maintenance sheets (planning: Frequency according to calendar or counter)</i> - <i>Automatic generation of BTs</i> - <i>Activities on BT</i> - <i>Closure of BT</i> - <i>Intervention report (cost calculation)</i> 	3	<i>Understand the process of planning operations and systematic preventive interventions.</i>
9-12	<p><i>TP4: Inventory and purchasing management</i></p> <ul style="list-style-type: none"> - <i>Creation of storage stores</i> - <i>Creation of suppliers</i> - <i>Stock entry (unit and multiple)</i> - <i>Stock releases</i> - <i>Stock reintegration</i> - <i>Transfer between 2 stores</i> - <i>Procurement management</i> 	6	<i>Understand the process describing the movement of stocks and purchases.</i>
13-14	<i>Practical exam</i>	3	<i>Summative evaluation</i>

4- Evaluation methods & Marks Distribution

Type of assessment	Yes No	Tx Weighting
<i>CC - Continuous assessment (Test/Quiz, Presentation, Report, etc.)</i>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	-
<i>DS - Supervised Duty</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	20%
<i>EE - Written test (Final exam)</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	60%
<i>EP - Practical test (TP- TP exam / MP- Mini project)</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	20%

- *Material 100% TP* : Average = 20% CC + 80% EP
- *100% CI material* : Average = 40% DS + 60% EE
- ***CI+TP material* : Average = 20% DS + 20% EP + 60% EE**

5- Evaluation criteria

- *Authorized documents* : Yes No
- *Authorized search engine* : Yes No
- *Criterion 1: Understanding of the content (4 points)*
- *Criterion 2: Application of knowledge (10 points)*

Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	31.5
Responsible	<i>Habib Abdenneji</i>					Volume. H. (TP)	
Module	<i>Organization and management of production</i>					Version	<i>09/2023</i>

Course description (Course objective):

This course aims to improve the knowledge and skills of electromechanical engineers in the field of production organization and management. Participants will learn the fundamentals of production management, including planning, scheduling, controlling and improving manufacturing processes. They will also gain an in-depth understanding of the methods and tools used to optimize production efficiency and productivity.

Prerequisites:

Industrialization course

Keywords :

Production management, Production scheduling, Planning, Scheduling

Specific objectives of the course (OBJ_i):

- OBJ 1 :** *Understand the basic principles of production management*
- OBJ 2 :** *Master the methods of planning and scheduling manufacturing processes*
- OBJ 3 :** *Learn to control and improve production performance*
- OBJ 4 :** *Apply the concepts learned to real production cases*

Necessary material :

...

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
---------	------------------------	--------	-------

1-2	<p><i>Introduction to production management</i></p> <ul style="list-style-type: none"> • <i>Basic concepts of production management</i> • <i>Roles and responsibilities of the production manager</i> • <i>Principles of production optimization</i> • <i>Analysis of a production process and proposal for improvements</i> 	4.5	<p><i>Understand the basic principles of production management</i></p>
3-4-5	<p><i>Aggregated Planning</i></p> <ul style="list-style-type: none"> • <i>Industrial and commercial plan</i> • <i>Master Production Program</i> • <i>Developing a production plan for a given scenario</i> 	6.75	<p><i>Master global planning methods</i></p>
6-7-8-	<p><i>Detailed Planning</i></p> <ul style="list-style-type: none"> • <i>Calculation of Net Requirements (MRP0)</i> • <i>Capacity study and production regulation (MRP1)</i> 	6.75	<p><i>Master manufacturing process planning methods</i></p>
9-10	<p><i>Production Management</i></p> <ul style="list-style-type: none"> • <i>Scheduling technique in functional workshop.</i> • <i>Task Scheduling Techniques</i> 	4.5	<p><i>Master the methods of scheduling manufacturing processes</i></p>
11-12-13-14	<p><i>Production control and improvement</i></p> <ul style="list-style-type: none"> • <i>Measuring and monitoring production performance</i> • <i>Continuous improvement methods (JIT)</i> • <i>Management of production problems</i> • <i>Analysis of production data and proposal of improvement solutions</i> 		<p><i>Learn to control and improve production performance</i></p>

3- Evaluation methods & Marks Distribution

Type of assessment	Yes No	Tx Weighting
<i>CC - Continuous assessment (Test/Quiz, Presentation, Report, etc.)</i>	<input type="checkbox"/> Yes <input type="checkbox"/> No	
<i>DS - Supervised Duty</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	40%
<i>EE - Written test (Final exam)</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	60%
<i>EP - Practical test (TP- TP exam / MP- Mini project)</i>	<input type="checkbox"/> Yes <input type="checkbox"/> No	

- *Material 100% TP : Average = 20% CC + 80% EP*

- **100% CI material** : **Average = 40% DS + 60% EE**
- *CI+TP material* : *Average = 20% DS + 20% EP + 60% EE*

5- Evaluation criteria

- *Authorized documents* : Yes No
- *Authorized search engine* : Yes No
- *Criterion 1: Understanding of the content (4 points)*
- *Criterion 2: Application of knowledge (10 points)*
- *Criterion 3: Critical analysis (4 points)*
- *Criterion 4: Clarity and organization (2 points)*

Manufacturing Analysis

1. General

Coded	<i>GELM 4109</i>	Level/Semester	2/S3	Coefficient	3	Credits	3
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	21
Responsible	<i>Hassine MARGHENI</i>					Volume. H. (TP)	21
Module	<i>Manufacturing Analysis</i>					Version	<i>09/2023</i>

Course description (Course objective):

Provide the useful and necessary tools and methods to criticize or choose the manufacturing file of a product.

Prerequisites:

Manufacturing processes ; strength of materials ; mechanical concept.

Keywords :

Methods office, machining range, preparation for manufacturing

Specific objectives of the course (OBJ_i):

OBJ 1 : *Read and interpret a definition drawing*

OBJ 2 : *Place a mechanical part in isostatic position and hold it on a machine tool.*

OBJ 3 : *Establish manufacturing dimensions and calculate unknown dimensions by dimensional or geometric transfer.*

OBJ 4 : *Determine dimensional, geometric, technological and economic prior art constraints.*

OBJ 5 : *Write an optimal machining plan for a mechanical part.*

OBJ 6 : *Establish a simple phase contract*

Necessary material :

Table, video projector, control and machining tools,

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
---------	------------------------	--------	-------

1-2	<ul style="list-style-type: none"> - Dimensional specifications and different types of tolerance intervals. - Geometric specifications and their interpretation. 	3h	Read and interpret a definition drawing
3-4-5	<ul style="list-style-type: none"> - Isostatism of standard shaped parts taking into account surface sizes - Isostatism of mechanical parts according to tolerance intervals. 	4.5h	Place a mechanical part in isostatic position and hold it on a machine tool.
6-7	<ul style="list-style-type: none"> - Manufacturing dimensions (Cm, Co and Ca) - Transfer of dimensions (dimensional and geometric). 	3h	Establish manufacturing dimensions and calculate unknown dimensions by dimensional or geometric transfer.
8	<ul style="list-style-type: none"> - Introduction to dispersion during machining of a series of parts. - Random and systematic dispersions - Example. 	1.5h	
9-10	<ul style="list-style-type: none"> - Machining simulation using the dispersion method. <ul style="list-style-type: none"> - Ratings obtained in a single phase. - Ratings obtained in 2 different phases with the same reference. - Ratings obtained in 2 different phases with different references. 	3h	
11-12	<ul style="list-style-type: none"> - Application to machining simulation. <ul style="list-style-type: none"> - Calculation of crude oil prices. - Calculation of manufacturing dimensions. 	3h	
13-14	<ul style="list-style-type: none"> - Review exercises 	3h	

3- Content elements (Practical work)

Week(s)	Activities/Content Elements	No. HR	Goals
1-2	<ul style="list-style-type: none"> Introduction to manufacturing analysis. Reading a definition drawing. Establish a sagittal graph (or connection between surfaces) 	3h	Read and interpret a definition drawing
3-4	<ul style="list-style-type: none"> - Search for the number of operations to machine a surface. - Know the different anteriority constraints. 	3h	Write an optimal machining plan for a mechanical part.
5-6	<ul style="list-style-type: none"> - Methodology for preparing the machining range. 	3h	

7-8	- Writing a machining range.	3h	
9-10	- Following drafting of a machining range.	3h	
11-12	- Phase contract.	3h	Establish a simple phase contract
13-14	Practical exam, mini-project defense, ...	3h	Summative evaluation

4- Evaluation methods & Marks Distribution

Type of assessment	Yes No	Tx Weighting
CC - Continuous assessment (Test/Quiz, Presentation, Report, etc.)	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
DS - Supervised Duty	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	20%
EE - Written test (Final exam)	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	60%
EP - Practical test (TP- TP exam / MP- Mini project)	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	20%

- Material 100% TP : Average = 20% CC + 80% EP
- 100% CI material : Average = 40% DS + 60% EE
- **CI+TP material : Average = 20% DS + 20% EP + 60% EE**

5- Evaluation criteria

- Authorized documents : Yes No
- Authorized search engine : Yes No
- Criterion 1: presentation of the copy (2 points)
- Criterion 2: application of current standards (3 points)
- Criterion 3: applied approach (5 points)
- Criterion 4: accuracy of results (10 points)

Certification Preparing CAO 2

1. General

Coded	GELM4107	Level/Semester	2/S3	Coefficient	0.75	Credits	3
Course	Electromechanical Engineering					Volume. H. (CI)	
Responsible	Maher ELTAIEF					Volume. H. (TP)	10.5
Module	Preparing for CAD 2 certification					Version	09/2023

Course description (Course objective):

Course description:

SOLIDWORKS certifications accurately assess knowledge and expertise with SOLIDWORKS software.

The program establishes an industry standard by which SOLIDWORKS professionals are evaluated through a comprehensive, unbiased test of their SOLIDWORKS knowledge in the areas of mechanical design and design validation. With this certification, you position yourself as a highly competent SOLIDWORKS professional. Recruiters can feel confident in their decision to hire a certified candidate, reducing the time it takes to onboard a new team member.

Each CSWP certification certifies users' skills in the design and analysis of parametric parts and moving assemblies through the use of a set of complex functions in SOLIDWORKS software.

Prerequisites:	Keywords :
<i>Computer tools, technical drawing rules, mechanical design, basic notions of SOLIDWORKS.</i>	<i>CSWP, SOLIDWORKS Advanced Features</i>

Specific objectives of the course (OBJ_i):

OBJ 1 : *Master advanced sketching tools;*

OBJ 2 : *Master advanced tools for functions and design of complex parts;*

OBJ 3 : *Master advanced tools for functions and design of complex parts;*

OBJ 4 : *Master advanced assembly tools and create more complex systems;*

OBJ 5 : *Master advanced drawing tools;*

Necessary material :

Painting ; Video projector ; computer laboratory; SOLIDWORKS software

2- Content elements (Course)

Mechanical design 3

1. General

Coded	GELM4106	Level/Semester	2/S3	Coefficient	1.5	Credits	3
Course	Electromechanical Engineering					Volume. H. (CI)	21
Responsible	Maher ELTAIEF					Volume. H. (TP)	
Module	Mechanical Design 3					Version	09/2023

Course description (Course objective):

Course description:

The mechanical transmission of movement consists of transmitting a movement from one part to another without modifying its nature, using different types of systems.

When the movement coming from a force of a mechanical component is communicated to another without being transformed, there is transmission of movement. In a mechanical transmission system, the moving motor organ transmits the action to the receiving organ. These two organs can be directly in contact, but the transmission of movement can also be done using an intermediate organ.

Prerequisites:

Mathematical tools (vector- Torseur...); Mechanical connections; motion transformation systems.

Keywords :

Motion transmission system, gear train, coupling, clutch, brake, torque limiter.

Specific objectives of the course (OBJ_i):

OBJ 1 : *Define motion transmission systems;*

OBJ 2 : *Determine the input-output law of motion transmission systems;*

OBJ 3 : *Define the characteristics of gears;*

OBJ 4 : *Study classic and epicyclic trains;*

OBJ 5 : *Indicate typical misalignments;*

OBJ 6 : *Define the function of a coupling, a clutch and a brake;*

OBJ 7 : *Study permanent and temporary couplings and demonstrate the most fundamental formulas;*

Necessary material :

Painting ; Video projector.

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1	<i>Chapter 1: the different motion transmission systems</i>	1.5	<i>Know the main motion transformation systems and their functional application; Determine the input-output laws.</i>
2-3	<i>Chapter 2: Motion transmission systems by gear: the characteristics of gears.</i>	3	<i>Know the different types of gears and their characteristics.</i>
4-5	<i>Chapter 3: Classical and epicyclic trains;</i>	3	<i>Create the kinematic diagram of the gear motion transmission systems; Define the usual operating cases for planetary gear trains; Determine the transmission ratio.</i>
6	<i>Directed work on gear motion transmission systems</i>	1.5	
8-9	<i>Chapter 4: Permanent couplings</i>	3	<i>Present and describe the main families of permanent couplings; Define the type of coupling chosen. Propose a constructive solution.</i>
10-11	<i>Chapter 5: Temporary couplings</i>	3	<i>Present and describe the main families of permanent couplings; Define the type of coupling chosen; Propose a constructive solution.</i>
12	<i>Chapter 6: Torque limiters</i>	3	<i>Present and describe the main torque limiters; Propose a constructive solution.</i>
13-14	<i>Tutorials for Chapter 4; 5 and 6</i>	3	<i>Tutorials</i>

Solid Mechanics

1. General

Coded	<i>GELM 4108</i>	Level/Semester	2/S3	Coefficient	3	Credits	3
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	42
Responsible	<i>Brahim MELAOUHI</i>					Volume. H. (TP)	
Module	<i>Solid Mechanics</i>					Version	<i>09/2023</i>

Course description (Course objective):

The fundamental objective of this course lies in the consolidation of students' skills in rigid solid mechanics, aiming to instill a deep understanding of the principles governing the movement and dynamic behavior of mechanical systems and to develop practical expertise in the application of dynamic tools. By providing a solid foundation of scientific knowledge, this training aims to arm students with the skills and design tools necessary to interpret the laws of motion in a rigorous manner. Ultimately, this acquisition of knowledge serves as a foundation on which students will be able to build and deepen their expertise, thus forming a solid foundation for any subsequent pursuit in the field of rigid solid mechanics.

Prerequisites:	Keywords :
<i>Vector calculation, Notions of torsors, Statics of solids, Kinematics, Matrix calculations, Mechanical connections</i>	<i>Kinematics, Dynamics, equations of motion, Lagrange, PFD, inertia tensor.</i>

Specific objectives of the course (OBJ_i):

OBJ 1 : *Provide the general bases essential for the analysis of rigid systems subjected to forces, for the study of mechanisms.*

OBJ 2 : *Determine the equations of motion of a mechanical system.*

OBJ 3 : *Analyze the movement and dynamic behavior of a mechanical system.*

Necessary material :

Presentation of mass geometry and use of digital tools, Use of Fundamental principle of dynamics, Industrial case study, Awareness of factors load, Presentation of a digital resolution tool

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals

Modeling and management of electrical networks

1. General

Coded	<i>GELM4105</i>	Level/Semester	2/S3	Coefficient	3	Credits	3
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	42
Responsible	<i>Nadia HAJJI</i>					Volume. H. (TP)	
Module	<i>Modeling and management of electrical networks</i>					Version	<i>09/2023</i>

Course description (Course objective):

- Give future engineers the basic knowledge necessary to understand how an electrical network works (techniques used, dedicated vocabulary, voltage levels)
- Understand the problem of energy supply in the context of market opening.

Prerequisites:	Keywords :
<i>Electrical engineering</i>	<i>Electrical network, dispatching, load diagram, stability...</i>

Specific objectives of the course (OBJ_i):

- OBJ 1 :** *Understand how the electricity network works (production, transport, distribution)*
- OBJ 2 :** *Know the electrotechnical constraints that can constrain electrical energy markets.*
- OBJ 3 :** *Sizing faults and their causes to properly manage the electrical network.*

Necessary material :

...

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	<i>Basic notions of the sinusoidal regime</i>	6	<i>Become familiar with the calculation of powers, alternating quantities, voltages, currents, impedances, vector representation and complex</i>

			<i>representation, powers, power factor compensation.</i>
3	<i>System of reduced units</i>	3	<i>Reduce the calculation load due to real quantities by using reduced units (pu) from a base quantity.</i>
4-7	<i>Modeling of electrical network elements</i>	12	<i>Modeling of the generator, modeling of the lines based on an equivalent diagram in PI (Case of a short line/long line), Equivalent diagram of the transformers, (Kapp approximation and equivalent diagram in T), Modeling of the loads. Power flow (Newton Raphson method, Gauss Siedel).</i>
8-11	<i>Calculation of short-circuit currents in the electrical network</i>	12	<i>Know the cause of a fault in the electrical network, size the fault current at any point on the network and choose the means of protecting people and property.</i>
12-14	<i>Management of electrical networks</i>	9	<i>Monitor consumption and production to ensure continuity of supply, voltage plan, load shedding plan, Dispatching, HVDC, Smart-Grid, etc.</i>

3- Content elements (Practical work)

Course description (Course objective):

Master the operation and identify the components of a SAP

Mastering Grafcet

SAP automation

Prerequisites:

Automated systems

Keywords :

Grafcet, Automaton, Gemma...

Specific objectives of the course (OBJ_i):

OBJ 1 : *Study of a SAP*

OBJ 2 : *SAP ordering and management*

OBJ 3 : *SAP programming*

Necessary material :

AUTOMAT, Scales, HMI

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	<i>General information on SAPs</i> <ul style="list-style-type: none"> <i>Definition</i> <i>Functioning</i> <i>Inputs/Outputs (I/O)</i> <i>Programming</i> 	3	<i>Provide an overview of SAPs</i>

	<ul style="list-style-type: none"> • Applications • Flexibility • Communication Networks 		
3-4	<p><i>Grafcet</i></p> <ul style="list-style-type: none"> • Stages (or states) • Transitions • Actions • Terms • Events • Level Actions 	3	SAP ordering and management
5-6	<p><i>Gemma</i></p> <ul style="list-style-type: none"> • Structuring of the Gemma • Method of using GEMMA • Design of a sequential automation 	3	
7-14	<p><i>API programming</i></p> <ul style="list-style-type: none"> • Ladder Language (LAD) • Functional Block Language (FBD) • Instruction List Language (IL) • Ladder Diagram Language (SFC) • Structured State Language (ST) 	12	SAP programming

3- Content elements (Practical work)

Week(s)	Activities/Content Elements	No. HR	Goals
1-2	<i>Pneumatic Control</i>	3	SAP ordering and management
3-4	<i>Electropneumatic control</i>	3	
5-6	<i>API Programming - Instruction List Language (IL)</i>	3	SAP programming
7-8	<i>API programming - Functional Block Language (FBD)</i>	3	
9-10	<i>API programming - Ladder Diagram Language (SFC)</i>	3	
11-12	<i>API Programming - Structured State Language (ST)</i>	3	
13-14	<i>Practical exam, mini-project defense, ...</i>	3	Summative evaluation

Vibration Mechanics

1. General

Coded	<i>GELM 4206</i>	Level/Semester	2/S4	Coefficient	2.25	Credits	3
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	21
Responsible	<i>Brahim MLAOUHI</i>					Volume. H. (TP)	10.5
Module	<i>Vibration Mechanics</i>					Version	09/2023

Course description (Course objective):

The Vibration Mechanics course aims to provide students with an in-depth understanding of vibrational phenomena in mechanical systems. The main objective is to explore the fundamental principles that govern the oscillatory motion of structures, machines and mechanical components. Students will learn to analyze and model vibrations, examining factors such as natural frequency, damping, and vibration modes. The course also covers methods of measuring and controlling vibrations, and their importance in the design and maintenance of mechanical systems. With a focus on practical applications, students will acquire the skills necessary to solve complex vibration-related problems in various fields such as structural engineering, aerospace, machine mechanics, important case in point: suspensions , insulation, measuring devices, vehicles, machine faults...etc. In accordance with the description of the mechanics of vibrations of solids, the course is divided into five essential chapters for an in-depth understanding of this dynamic field.

Prerequisites:	Keywords :
<ul style="list-style-type: none"> - <i>Dynamics of the rigid solid</i> - <i>Linear second order differential equation with constant coefficients</i> - <i>Basics of linear algebra.</i> 	<p><i>Vibration, Equation of motion, conservative system, dissipative system, resonance, frequency, vibration response.</i></p>

Specific objectives of the course (OBJ_i):

- OBJ 1 :** *Gain an in-depth understanding of the fundamental concepts of vibration mechanics*
- OBJ 2 :** *Be able to model complex mechanical systems as vibrational systems, using differential equations*
- OBJ 3 :** *Master the analysis of single degree of freedom systems, including the calculation of natural frequencies, eigenmodes and temporal responses.*

OBJ 4 : *Extend understanding to the analysis of systems with several degrees of freedom, by exploring numerical and analytical methods.*

OBJ 5 : *Understand the basic principles of vibration control and be able to apply control strategies to mitigate unwanted vibrations.*

Necessary material :

- *MATLAB environment installed.*
- *Data files for the system studied (if necessary).*

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	<p>Ch.1: Introduction to Mechanical Vibrations</p> <p><i>Basics of vibration mechanics, Introduction to Vibrations: (Origins, causes, consequences, etc.).</i></p> <p><i>The basic models of vibration (mass, spring and damper)</i></p> <p><i>Fundamental concepts such as free and forced oscillations, degrees of freedom, and the basic elements of vibrational systems.</i></p>	3h	<ul style="list-style-type: none"> - <i>Explain the basics of vibration mechanics. Understand the origins, causes and consequences of mechanical vibrations.</i> - <i>Identify areas of application of vibrations in various contexts.</i> - <i>Describe the fundamental models of vibration (mass, spring and damper). Mastery of Fundamental Concepts:</i> - <i>Explain the concept of degrees of freedom in the context of vibrational systems.</i> - <i>Identify and understand the basic elements of vibration systems.</i>
3-4	<p>Ch.2: Mathematical Modeling of Vibration Systems</p> <p><i>Mathematical modeling of mechanical systems in vibratory motion.</i></p> <p><i>Lagrange equations, Differential equations that describe the dynamic behavior of systems, with emphasis on solving these</i></p>	3h	<ul style="list-style-type: none"> - <i>Master the concept of Lagrange equations for modeling vibrational systems.</i> - <i>Understand how Lagrange equations simplify the description of complex movements in mechanical systems.</i> - <i>Develop an in-depth understanding of mechanical systems in vibratory motion.</i> - <i>Identify the characteristics of vibrations ; amplitude, frequency and phase.</i>

	<p><i>equations to determine vibrational characteristics.</i></p>		
5-6	<p>Ch.3: Study of free vibrational systems at one dof.</p> <p><i>Definition of the one-dof system:</i></p> <p style="padding-left: 40px;"><i>Explanation of the concept of degree of freedom.</i></p> <p style="padding-left: 40px;"><i>Examples of one-dof systems. Case of the simple harmonic oscillator (Case of the simple pendulum).</i></p> <p><i>Equation of motion:</i></p> <p style="padding-left: 40px;"><i>Development of the differential equation of motion.</i></p> <p style="padding-left: 40px;"><i>Initial conditions.</i></p> <p><i>Solutions of the equation of motion:</i></p> <p style="padding-left: 40px;"><i>General solution of the equation of motion.</i></p> <p style="padding-left: 40px;"><i>Special cases and examples.</i></p> <p><i>Natural frequency:</i></p> <p style="padding-left: 40px;"><i>Definition of natural frequency.</i></p> <p style="padding-left: 40px;"><i>Influence of system parameters on natural frequency.</i></p> <p><i>Amortization :</i></p> <p style="padding-left: 40px;"><i>Introduction to the concept of depreciation.</i></p> <p style="padding-left: 40px;"><i>Types of damping (viscous, dry, etc.).</i></p>	3h	<ul style="list-style-type: none"> - <i>Understand the nature of vibrational systems with one degree of freedom.</i> - <i>Understand the physical meaning of each term in the equation of motion.</i> - <i>Introduce analytical solutions to the equations of motion, particularly simple harmonic solutions.</i> - <i>Apply initial conditions to solve for integration constants.</i> - <i>Understand the effects of damping on the vibration behavior of systems, and know how to model and quantify damping.</i>
	<p>Ch.4: Response of forced vibrational systems to a dof.</p> <p><i>Definition of the system forced to a dof:</i></p> <p><i>Examples of systems forced to a dof.</i></p> <p><i>Forced response:</i></p>		<ul style="list-style-type: none"> - <i>Define harmonic forcing and explain its role in forced vibration systems.</i> - <i>Identify the characteristics of a harmonic force, such as amplitude and frequency.</i> - <i>Write the equation of motion for a vibrational system with one degree of freedom subject</i>

7-10	<p><i>Explanation of the concepts of forced response and free response.</i></p> <p><i>Analysis of the two types of responses.</i></p> <p><i>Response to a sinusoidal force:</i></p> <p><i>Analysis of the response of a system to a sinusoidal force.</i></p> <p><i>Magnitude and phase of the response.</i></p> <p><i>Response to an unbalance force:</i></p> <p><i>Analysis of the response of a system to an unbalance force</i></p> <p><i>Magnitude and phase of the response.</i></p> <p><i>Transmission of vibrations to the foundations; Response to a supporting force:</i></p> <p><i>Response analysis</i></p> <p><i>Communicability Report</i></p> <p><i>Magnitude and phase of the response.</i></p> <p><i>Vibration isolation</i></p> <p><i>Exercises to reinforce understanding of concepts.</i></p> <p><i>Numerical resolution problems.</i></p>	3h	<p><i>to a harmonic force , unbalance force and support force.</i></p> <ul style="list-style-type: none"> - <i>Explain the terms resonance, damping and stiffness in the context of the equations of motion.</i> - <i>Define the concept of steady-state response of a forced system.</i> - <i>Calculate the amplitude of the steady-state response for a vibrational system at one DOF.</i>
	<p>Ch.5: Study of free and forced DOF vibration systems .</p> <p><i>Introduction to systems with “n” degrees of freedom:</i></p> <p><i>Definition of “n” dof systems.</i></p> <p><i>Examples of multi-DOF systems in the context of mechanical vibrations.</i></p> <p><i>Modeling of “n” dof systems:</i></p> <p><i>Use of differential equations to model the motion of systems.</i></p>		<ul style="list-style-type: none"> - <i>Master the equations of motion for systems with n degrees of freedom in the case without damping.</i> - <i>Know how to analytically solve the equations of motion for systems with n degrees of freedom with damping.</i> - <i>Analyze the normal modes and natural frequencies of systems with n degrees of freedom.</i> - <i>Understand the concept of coupling between degrees of freedom in vibrational systems.</i>

11-14	<p><i>Concept of mass, stiffness and damping matrices.</i></p> <p><i>Systems with “n” free dof:</i></p> <p><i>Reminder of the concepts of natural frequencies and natural modes.</i></p> <p><i>Analysis of normal vibration modes.</i></p> <p><i>Numerical methods for solving the equations of motion.</i></p> <p><i>Systems with “n” forced dof:</i></p> <p><i>Introduction of external forces and excitations.</i></p> <p><i>Forced response and amplitude as a function of excitation frequency.</i></p> <p><i>Resonance and its importance in vibrational systems.</i></p> <p><i>Analysis methods:</i></p> <p><i>Frequency response method.</i></p> <p><i>Spectral analysis of forced responses.</i></p> <p><i>Use of numerical methods such as the finite element method.</i></p>	3h	<ul style="list-style-type: none"> - <i>Analyze the forced responses of systems with n degrees of freedom under the effect of periodic forces.</i> - <i>Understand resonance phenomena and ways to avoid or mitigate them.</i> - <i>Apply the principles of vibration mechanics to concrete cases from engineering.</i>
		3h	

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals
1-2	<p><i>Practical applications:</i></p> <p><i>Application examples in fields such as engineering, aerospace, etc.</i></p> <p><i>Analysis of vibrations in complex structures.</i></p> <p><i>TP-1 Modeling of a 1ddl system on Matlab Simulink® & Simscape™.</i></p> <p><i>Use of programmable blocks (Mass, spring, shock absorber, etc.) , Connection of blocks, Configuration of parameters, Configuration of initial conditions,</i></p>	3h	<ul style="list-style-type: none"> - <i>Understand the basic concepts of modeling systems with multiple degrees of freedom.</i>

	<p><i>Simulation of the model, Analysis of results and Observation of the system response to the simulation.</i></p> <p><i>Study of the influence of the nature of the excitation on the response.</i></p> <p><i>Study of the influence of parameters on the response.</i></p>		<ul style="list-style-type: none"> - Acquire skills in using MATLAB for modeling dynamic systems.
3-4	<p>TP-2 Modeling a 2ddl system on Matlab Simulink® & Simscape™</p> <p>Part 1 : Modeling in Matlab Simulink®</p> <p><i>Creation of a new Simulink model.</i></p> <p><i>Added mass, spring and damping blocks to represent the 2dof system.</i></p> <p><i>Connecting the blocks to form the system model.</i></p> <p><i>Setting the physical properties of the system elements (mass, spring stiffness, damping coefficient).</i></p> <p><i>Configuring initial conditions.</i></p> <p>Part 2 : System simulation in Simulink</p> <p><i>Definition of simulation parameters (simulation time, time step, etc.).</i></p> <p><i>Running the simulation and observing the temporal response of the system.</i></p> <p><i>Analysis of simulation results, including mass movements and velocities over time.</i></p> <p>Part 3 : Modeling in Simscape™</p> <p><i>Introduction to Simscape™ and its physical blocks.</i></p> <p><i>Creation of a new Simscape™ model.</i></p> <p><i>Use of physical components to model the 2ddl system.</i></p> <p><i>Configuration of physical parameters of components.</i></p>	3h	<ul style="list-style-type: none"> - Analyze the dynamic behavior of a complex system using MATLAB simulations. - Process numerical examples in the laboratory to illustrate the simulation of vibration behavior and theoretical concepts. - Acquire practical skills in using modeling and simulation software to characterize vibrational movements. - Analysis of experimental results - experimental data .

	<p>Part 4 : System simulation in Simscape™</p> <p><i>Setting simulation parameters specific to Simscape™.</i></p> <p><i>Running the simulation and comparing the results with those obtained in Simulink.</i></p> <p><i>Analysis of the benefits of using Simscape™ for modeling complex physical systems.</i></p> <p><i>Summary of the main stages of the practical work.</i></p> <p><i>Discussion of the advantages and limitations of each modeling approach.</i></p>		<p>- Compare experimental results with theoretical predictions.</p>
<p style="text-align: center;">5-6</p>	<p>TP-4 Modeling of a n dof system Matlab® Script (case study)</p> <p>Part 1: Theory of n dof systems</p> <p><i>Introduction to dynamic and multi-degree-of-freedom systems.</i></p> <p><i>Definition of key terms: degree of freedom, mass-spring system, mass and stiffness matrices.</i></p> <p><i>Equations of motion for a system with n dof.</i></p> <p>Part 2: Modeling the system in MATLAB</p> <p><i>Importing the necessary MATLAB tools.</i></p> <p><i>Definition of system parameters (mass, stiffness, damping).</i></p> <p><i>Writing the MATLAB script for modeling the n dof system.</i></p> <p>Part 3: Simulation and analysis</p> <p><i>Initialization of initial conditions and simulation parameters.</i></p> <p><i>Running the MATLAB script to generate the results.</i></p> <p><i>Analysis of the results: displacement, speed, acceleration, natural frequencies, natural modes.</i></p> <p>Part 4: Parameter variation and sensitivity analysis</p> <p><i>Changing system settings in MATLAB script.</i></p>	<p style="text-align: center;">3h</p>	

	<i>Running simulations for different configurations.</i> <i>Sensitivity analysis: how parameters influence system behavior.</i>		
7	Practical exam	1.5	Summative evaluation

Course description (Course objective):

Computer-assisted production management is an IT tool for managing all activities linked to the production of an industrial company; optimize all production processes by controlling various costs.

Prerequisites:	Keywords :
<i>OGP</i>	<i>Technical data, PIC, PDP, Planning, Scheduling, Launch, Declaration, Production</i>

Specific objectives of the course (OBJ_i):

- OBJ 1 :** *Optimize entire production processes, from resource planning to inventory management, to increase operational efficiency.*
- OBJ 2 :** *Planning and anticipation of manufacturing orders for better production traceability.*
- OBJ 3 :** *Calculation and determination of costs for an in-depth definition of load distribution.*

Necessary material :

Computer Lab, CAPM Software (E-Prelude)

2- Content elements (Course)

Course description (Course objective):

Lean Manufacturing courses aim to equip students with the skills needed to transform manufacturing or service operations by adopting a Lean approach, thereby improving business competitiveness and profitability.

Prerequisites:

OGP

Keywords :

Waste, Mudas, VA & NVA, customer, Productivity

Specific objectives of the course (OBJ_i):

- OBJ 1 :** *Introduce the fundamental principles of Lean*
- OBJ 2 :** *Identify and eliminate different forms of waste,*
- OBJ 3 :** *Approach to developing a continuous improvement project*
- OBJ 4 :** *Application of Lean tools in continuous improvement processes*

Necessary material :

...

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	Lean Philosophy: <i>Importance of the culture of continuous improvement. creating value, eliminating waste,</i>	3	<i>Introduce the fundamental principles of Lean</i>

3	<i>The hunt for waste (Muda) : overproduction, waiting, unnecessary transport, overproduction, unnecessary movements, excessive stocks, and defects.</i>	1.5	<i>Identify and eliminate different forms of waste,</i>
4-5	<i>Continuous Improvement (Kaizen) Constant improvement integrated into the company culture. learning to use Kaizen methods to solve problems, improve processes and drive innovation</i>	3	<i>Approach to developing a continuous improvement project</i>
6-14	<i>Lean tools : JIT, 5S, Jidoka, SMED, Poka-yoke, Kamban, TOC, VSM....</i>	13.5	<i>Application of lean tools in continuous improvement processes</i>

4- Evaluation methods & Marks Distribution

Type of assessment	Yes No	Tx Weighting
<i>CC - Continuous assessment (Test/Quiz, Presentation, Report, etc.)</i>	<input type="checkbox"/> Yes <input type="checkbox"/> No	
<i>DS - Supervised Duty</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	40%
<i>EE - Written test (Final exam)</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	60%
<i>EP - Practical test (TP- TP exam / MP- Mini project)</i>	<input type="checkbox"/> Yes <input type="checkbox"/> No	

- *Material 100% TP : Average = 20% CC + 80% EP*
- **100% CI material : Average = 40% DS + 60% EE**
- *CI+TP material : Average = 20% DS + 20% EP + 60% EE*

Course Specification

Hydraulic and pneumatic systems

1. General

Coded	<i>GELM4208</i>	Level/Semester	2/S4	Coefficient	3	Credits	3
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	21
Responsible	<i>Jamel MELAOUHI</i>					Volume. H. (TP)	21
Module	Hydraulic and pneumatic systems					Version	09/2023

Course description (Course objective):

Help the learner understand the mechanisms of hydraulic and pneumatic power transmission.

Prerequisites:

Fluid Mechanics and Heat Transfers.

Keywords :

Graphic symbol, pump, valves, motors, conditioning unit, cavitation,

Specific objectives of the course (OBJ_i):

OBJ 1 : *Understand the basic concepts, component symbols and coding for graphical representation*

OBJ 2 : *Know how to choose and study the basic components: pumps, compressors, motors, cylinders and valves for a given hydraulic or pneumatic industrial installation.*

OBJ 3 : *Study the characteristics of hydrostatic transmissions*

OBJ 4 : *Study fluids and packaging*

OBJ 5 : *Understanding the all or nothing command, GRAFCET*

OBJ 6 : *Realized by applications: electrical logic, programmable logic controllers and pneumatic logic .*

Necessary material :

...

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	<i>Hydraulic and pneumatic power transmission systems</i>	3h	<i>Read blueprints and identify pneumatic and hydraulic components</i>

	<ul style="list-style-type: none"> - Identification of the different components and technologies of hydraulic and pneumatic circuits. - Coding of components - Define the function of each component in a circuit 		
3-6	<p><i>Flow generators</i></p> <ul style="list-style-type: none"> - Types of pumps (volumetric and non-volumetric) - Characteristics of positive displacement pumps (flow rates, displacement, pressure, efficiency, etc.) - Choice of a pump for a given installation. - Characteristics of non-volumetric pumps (flow rate, Hmt, NPSH, efficiency, operating point, etc.) - Compressors 	6	<i>Study a hydraulic installation and select a flow generator according to the need</i>
7-10	<p><i>Hydraulic and pneumatic actuators</i></p> <ul style="list-style-type: none"> - Alternative actuators (cylinders) - Rotary actuators (motors) - suction cups - Characteristics of the different actuators - Choice of actuators - Energy used 	6	<i>Study the different hydraulic and pneumatic actuators and their characteristics.</i>
11-14	<p><i>Hydraulic fluids</i></p> <ul style="list-style-type: none"> - Properties - Category and compatibility - filtration and conditioning 	6	<i>Study the properties of hydraulic fluids . Understanding Fluid Handling and Use</i>

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals
1-2	<p><i>Design a hydraulic circuit based on a case study.</i></p> <p><i>Perform the simulation on hydraulic software</i></p>	3h	<i>Interventions on circuits: identification and replacement of components, adjustment of parameters (flow, pressure)</i>

3-4	<p><i>Design a pneumatic circuit based on a case study.</i></p> <p><i>Perform the simulation on pneumatic software</i></p>	3h	<p><i>Interventions on circuits: identification and replacement of components, adjustment of parameters (flow, pressure)</i></p>
5-6	<p><i>Wire the circuits on simulation benches and adjust the parameters (pressure, flow)</i></p>	3h	<p><i>Understand the operation and role of circuit components.</i></p>
7-8	<p><i>On the centrifugal pump test bench:</i></p> <ul style="list-style-type: none"> - <i>Using the isolation valve, select the circuit where only one pump is operating</i> - <i>Vary the flow using a flow adjustment valve</i> - <i>Determine the characteristic curve of the pump $H_{mt}=f(Q_v)$</i> - <i>Determine its yield $\eta=f(Q_v)$</i> 	3h	<p><i>Determine the characteristics (H_{mt}, Q_v, η) of a single pump</i></p>
9-10	<p><i>On the centrifugal pump test bench:</i></p> <ul style="list-style-type: none"> - <i>Using the isolation valve, select the circuit for coupling pumps in series</i> - <i>Vary the flow using a flow adjustment valve</i> - <i>Determine the characteristic curve of the coupling $H_{mt}=f(Q_v)$</i> - <i>Determine the coupling efficiency $\eta=f(Q_v)$</i> 	3h	<p><i>Determine the characteristics (H_{mt}, Q_v, η) of a series pump coupling</i></p>
11-12	<p><i>On the centrifugal pump test bench:</i></p> <ul style="list-style-type: none"> - <i>Select the circuit for parallel pump coupling using the isolation valve</i> - <i>Vary the flow using a flow adjustment valve</i> - <i>Determine the characteristic curve of the coupling $H_{mt}=f(Q_v)$</i> - <i>Determine the coupling efficiency $\eta=f(Q_v)$</i> 	3h	<p><i>Determine the characteristics (H_{mt}, Q_v, η) of a parallel pump coupling</i></p>
13-14	<p><i>Practical exam, mini-project defense, ...</i></p>	3h	<p><i>Summative evaluation</i></p>

4- Evaluation methods & Marks Distribution

Sensor theory

1. General

Coded	<i>GELM4205</i>	Level/Semester	2/S4	Coefficient	1.5	Credits	2
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	21
Responsible	<i>Souha BOUKADIDA</i>					Volume. H. (TP)	
Module	<i>sensor theory</i>					Version	<i>09/2023</i>

Course description (Course objective):

Sensor theory encompasses the fundamental principles, technologies, and concepts related to the design, operation, and use of sensors. A sensor is a device that measures a physical or chemical phenomenon and converts this measurement into an understandable or usable signal

Prerequisites:

Electronics, Signal processing

Keywords :

Sensor, sensitivity, response, network, ...

Specific objectives of the course (OBJ_i):

OBJ 1 : *Define the different sensor measurement areas and the ways of transduction.*

OBJ 2 : *Present the characteristics of the different types of sensor*

OBJ 3 : *Describe sensitivities to power supply, electromagnetic interference, or other environmental signals and different ways of providing power*

OBJ 4 : *Sensors can provide analog (continuous) or digital (discontinuous) outputs.*

OBJ 5 : *Interconnections to form a network, allowing data collection*

Necessary material :

...

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
---------	------------------------	--------	-------

1-2	Measurement areas and Transduction	3	Define the different sensor measurement domains and the ways of transduction
3-6	Sensitivity, Linearity, Stability, Response time and measuring range	6	Present the characteristics of the different types of sensor
7-8	Power and interference	3	Describe sensitivities to power supply, electromagnetic interference, or other environmental signals and different ways of providing power
9-10	Output Characteristics	3	Sensors can provide analog (continuous) or digital (discontinuous) outputs.
11-14	Sensor network	6	Interconnections to form a network, allowing data collection

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals

Production techniques and CAM

1. General

Coded	<i>GELM 4207</i>	Level/Semester	2/S4	Coefficient	3	Credits	3
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	21
Responsible	<i>Hassine MARGHNI</i>					Volume. H. (TP)	21
Module	<i>Production techniques and CAM</i>					Version	<i>09/2023</i>

Course description (Course objective):

Implement and program a numerically controlled machine tool.

Prerequisites:

Manufacturing processes ; mechanical concept.

Keywords :

MOCN, CNC, CAM, numerical control

Specific objectives of the course (OBJ_i):

OBJ 1 : *Understand the architecture and technology of Numerical Control Machine Tools (MOCN)*

OBJ 2 : *Compare conventional machines and numerically controlled machines.*

OBJ 3 : *Modeling of a MOCN (machine configuration, origins, characteristic points, axes, machine coordinate system)*

OBJ 4 : *Know the parts mounting systems and tool attachment systems, turrets and tool magazines: (part coordinate system, tool coordinate system, offset and alignment of coordinate systems)*

OBJ 5 : *Identify the implementation parameters of MOCN (Vector Models).*

OBJ 6 : *Know the structure of an ISO program: (Program header, blocks, words, addresses, End of the program, etc.)*

OBJ 7 : *Know the functions (preparatory G, auxiliary M, technological T, D, S, etc.) and their applications,*

OBJ 8 : *Program the cutting conditions (spindle rotation management, feed management, watering);*

OBJ 9 : *Program a profile and elementary operations (turning case, milling case);*

OBJ 10 : *Program machining cycles for turning and milling (drilling cycles, threading, roughing, pockets, etc.)*

Necessary material :

Table, video projector, CNC machine tool, PC with CAM software

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	<ul style="list-style-type: none"> - Introduction to Numerical Control Machine tools, their different architectures and technologies. - Comparison between conventional machines and numerically controlled machines. 	3h	Know the architecture and technology of Numerical Control Machine tools
3	<ul style="list-style-type: none"> - Model a MOCN (machine configuration, origins, characteristic points, axes, machine coordinate system) 	1.5h	Modeling of a MOCN (machine configuration, origins, characteristic points, axes, machine coordinate system)
4-5	<ul style="list-style-type: none"> - Part mounting systems and tool attachment systems, turrets and tool magazine: (part coordinate system, tool coordinate system, offset and alignment of coordinate systems) - Setting parameters and implementation of MOCN (Vector Models). 	3h	Know the parts mounting systems and tool attachment systems, turrets and tool magazines: (part coordinate system, tool coordinate system, offset and alignment of coordinate systems)
6	<ul style="list-style-type: none"> - Structure of an ISO program: (Program header, blocks, words, addresses, End of program, etc.) 	1.5h	Know the structure of an ISO program: (Program header, blocks, words, addresses, End of the program, etc.)
7-8	<ul style="list-style-type: none"> - Know the functions (preparatory G, auxiliary M, technological T, D, S, etc.) and their applications, 	3h	
9	<ul style="list-style-type: none"> - Program the cutting conditions (spindle rotation management, feed management, watering); 	1.5h	
10	<ul style="list-style-type: none"> - Program a profile and elementary operations (turning case, milling case); 	1.5h	
11-12	<ul style="list-style-type: none"> - Machining cycles in turning and milling (drilling cycles, threading, roughing, pockets, etc.) 	3h	

13-14	- <i>Application exercises</i>	3h	
-------	--------------------------------	----	--

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals
1-2	- <i>Discovery of the CNC machine and its components</i>	3h	<i>Know the architecture and technology of Numerical Control Machine tools</i>
3-4	- <i>Adjustment of the position of the part origin relative to the measurement origin (PREF);</i> - <i>Adjusting the position of the program origin in relation to the part origin (DEC1)</i>	3h	<i>Modeling of a MOCN (machine configuration, origins, characteristic points, axes, machine coordinate system)</i>
5-6	- <i>Adjusting tool gauges</i>	3h	
7-8	- <i>Enter a program using the machine's alphanumeric keyboard.</i> - <i>Machining a part on MOCN</i>	3h	<i>Program machining cycles for turning and milling (drilling cycles, threading, roughing, pockets, etc.)</i>
9-10	- <i>Program turning machining using CAM software</i>	3h	
11-12	- <i>Program a milling process using CAM software</i>	3h	
13-14	- <i>TP exam (on FAO and MOCN)</i>	3h	<i>Summative evaluation</i>

Course description (Course objective):

Master simulation techniques in order to solve engineering problems that cannot be solved by analytical methods.

Prerequisites:

*Analysis and Algebra of preparatory classes;
Numerical analysis*

Keywords :

*Interpolation functions; finite element methods;
stiffness matrix*

Specific objectives of the course (OBJ_i):

OBJ 1 : *Understand the notion of numerical approximation as well as its quantification.*

OBJ 2 : *Master digital simulation techniques.*

OBJ 3 : *Use and master calculation software.*

Necessary material :

...

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	<i>Introduction to numerical simulation</i>	3	<i>Definition of digital simulation b. Applications and importance in solving real problems Master the gaps between the numerical solution and the physical phenomenon to be</i>

			<i>studied. Presentation of the different numerical errors.</i>
3-4	<i>partial differential equations ; Presentation of Numerical Methods for Solving Differential Equations</i>	3	<i>Presentation of physical models in the form of differential equations</i>
5-8	<i>Finite element method FEM; Interpolation functions</i>	6	<i>Principle of FEM and applications in engineering and numerical simulation Presentations of interpolation functions in the different cases: 1D; 2D; 3D</i>
9-11	Application to beam elements (1D case)	4.5	<i>From the mathematical formulation to the equivalent writing of the algebraic (matrix) equation to be solved; determination of the stiffness matrix</i>
12-14	2D solution method lattice elements	4.5	<i>Numerical resolution of 2D problems</i>

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals
1-2	<i>Bending of a beam</i>	3	<i>Study of the effect of mesh quality on numerical results</i>
3-4	<i>Hole plate in tension</i>	3	<i>Use adaptive meshing technique to ensure accuracy of numerical results</i>
5-6	<i>Thermomechanical study of a heated pipe connection</i>	3	<i>Master the transfer of results from the thermal study to the static study to obtain the thermomechanical solution</i>
7-8	<i>Aerostatic simulation of an airplane wing. Determination of pressure and stress profile</i>	3	<i>Use the forces from aerodynamic simulation to study the stresses induced in the wing.</i>
9-12	<i>Elastoplastic behavior of a sheet subjected to V-shaped bending</i>	6	<i>Simulation of an assembly with non-linear behavior</i>
13-14	<i>Practical exam</i>	3	<i>Summative evaluation</i>

Mechanism theory

1. General

Coded	GELMAM5106	Level/Semester	3/S5	Coefficient	2.25	Credits	3
Course	Electromechanical Engineering					Volume. H. (CI)	31.5
Responsible	Jamel MLAOUHI					Volume. H. (TP)	
Module	Mechanism theory					Version	09/2023

Course description (Course objective):

The Theory of Mechanisms course, as a mechanical design tool, aims to provide students with an in-depth understanding of the fundamental principles of the statics and kinematics of mechanisms and articulated mechanisms. The main objective is to develop the skills necessary to analyze and design mechanisms while understanding key concepts such as kinematics, statics, and hyperstaticism. At the end of the course, students will be able to solve a hyperstatic/isostatic kinematics or statics/dynamics problem, to criticize the choices of mechanism models, to imagine kinematically equivalent isostatic mechanism models, and to interpret the hyperstaticism with its influences on rigidity, assembly, functioning and other aspects such as the mobility of mechanisms .

Prerequisites:

- Statics of non-deformable solids.
- Kinematics of mechanisms.
- Notions of torsors (static and kinematic)
- Mechanical connections (symbol, connection graph, twistors, etc.).
- Dimensional and geometric tolerances and specifications

Keywords :

Hyperstatic/isostatic mechanism, mobility, cyclomatic number, secondary equations, main equations.

Specific objectives of the course (OBJ_i):

- OBJ 1 :** *Gain an in-depth understanding of static balances in mechanisms.*
- OBJ 2 :** *Model a mechanism with a schematic model (kinematic diagram)*
- OBJ 3 :** *Apply the principles of statics to analyze the equilibrium of mechanisms and determine the equations reflecting static equilibrium.*
- OBJ 4 :** *Select appropriate models for solving kinematic or static problems.*
- OBJ 5 :** *Determine the degrees of hyperstaticism and mobility of the mechanisms.*

OBJ 6 : Critically evaluate mechanism model choices based on specific problem requirements.

OBJ 7 : Propose solutions to make the mechanism isostatic.

Necessary material :

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	<p>Ch.1: Introduction to Mechanism Theory</p> <ul style="list-style-type: none"> - Mechanical connection, degree of freedom - Kinematic Torsor - Torsor of binding actions - Kinematic couple, compound connection, complex connection - Degree of mobility - Degree of hyperstatism 	4.5	<ul style="list-style-type: none"> - Understand the fundamental concept of mechanism theory. - Explore the different applications of mechanism theory in engineering. - Become familiar with basic terms and concepts related to mechanisms.
3-4	<p>Ch.2: Solid chains and equivalent bonds</p> <ul style="list-style-type: none"> ▪ Problematic, Parallel connections, Series connections, solid chains: open, closed, complex, Cyclomatic number. 	4.5	<ul style="list-style-type: none"> - Identify and define solid chains in mechanisms. - Master the graphic representation of chains of solids and connections. - Analyze the kinematic properties of solid chains.
5-6	<ul style="list-style-type: none"> ▪ Law of global mobility, Number of kinematic equations, Mobilities in the mechanism, useful mobility and internal mobility, Consequence on the kinematic equations. ▪ Calculation of the degree of hyperstatism, Consequences of hyperstatism. ▪ Exercises and tutorials 	4.5	
7-8	<p>Ch.3: Analysis of mechanisms</p> <ul style="list-style-type: none"> ▪ Static analysis <ul style="list-style-type: none"> - External actions - Link actions - Equation - Linear system analysis and results - Matrix writing of the linear system ▪ Exercises and tutorials ▪ Kinematic analysis 	4.5	<ul style="list-style-type: none"> - Acquire skills to analyze the kinematics of mechanisms. - Understand the relative movements of the components of a mechanism.

9-10	<ul style="list-style-type: none"> - Kinematic torsors associated with connections - Equation - Linear system analysis and results - Matrix writing of the linear system - Hyperstaticism in the kinematic sense ▪ Exercises and tutorials 	4.5	4.5	<ul style="list-style-type: none"> - Learn to use mathematical tools to model movements.
11-12				
13-14	<p>Ch.4: Systematic search for isostatic solutions</p> <ul style="list-style-type: none"> ▪ Obtaining isostatic solutions by direct elimination of hyperstatic forces. ▪ Obtaining isostatic solutions by adding new bonds ▪ Exercises and tutorials 	4.5		<ul style="list-style-type: none"> - Understand the concept of isostaticity in mechanisms. - Understand the conditions for a mechanism to be isostatic. - Acquire skills to determine the degree of isostaticity of a mechanism. - Explore systematic methods for solving isostatic design problems.

General mechatronics

1. General

Coded	<i>GELMAM5104</i>	Level/Semester	3/S5	Coefficient	3	Credits	4
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	21
Responsible	<i>Maher ELTAIEF</i>					Volume. H. (TP)	21
Module	<i>General mechatronics</i>					Version	<i>09/2023</i>

Course description (Course objective):

Course description:

Mechatronics is a technology combining mechanics, electronics, computing and new information and communication technologies. The alliance of these different areas makes it possible to think about a product differently from its design to recycling and maintenance. The aim of mechatronics is to create increasingly intelligent components and solutions that communicate with each other, to meet customer demands for excellence and enable the deployment of the factory of the future.

Prerequisites:

combinatorial & sequential logic systems ; analysis of automated systems, computer programming.

Keywords :

Mechatronic system, complex system, energy chain, information chain.

Specific objectives of the course (OBJ_i):

- OBJ 1 :** *Master the notions of complex systems;*
- OBJ 2 :** *Decompose a complex system using the functional chain approach;*
- OBJ 3 :** *Establish the knowledge model in order to study the behavior of a complex system;*
- OBJ 4 :** *Establish and simulate the behavior model of a complex system;*
- OBJ 5 :** *Design complex and multidisciplinary systems;*
- OBJ 6 :** *Create a virtual prototype of a complex system.*

Necessary material :

Painting ; Video projector, computer laboratory.

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1	<i>Chapter 1: Introduction to mechatronics</i>	1.5	<i>Define mechatronics; the physical fields involved in mechatronics; Define the field of application of mechatronics. The objectives of mechatronic systems.</i>
2-5	<i>Chapter 2 : Structural constitution of a mechatronic system. Tutorials</i>	6	<i>Describe in a global way the functioning of a complex system; Identify and specify the exchange part PE, the control part PC and the operational part PO; Define the interactions between PE-PC-PO.</i>
6-10	<i>Chapter 3: Functional chain of a mechatronic system. Tutorials</i>	7.5	<i>Describe the detailed operation of a complex system; Break down a complex system into an energy chain and an information chain; Know all the elements constituting the energy chain; constituents of the information chain;</i>
10-11-12	<i>Chapter 4: Modeling and simulation of mechatronic systems. Tutorials</i>	6	<i>Define the concept Energy-Power; Define effort-flow variables; Define the basic models associated with mechanics, electrical, hydraulic... Define energy resources; Model mechatronic systems Define the general principle for modeling a complex system; Define the knowledge model; Define the behavior model;</i>

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals
1-2	<i>TP 1: Discover the Simulink environment.</i>	3	<i>Discover the Simulink interface for the design of complex systems.</i>

3-4	<i>TP 2: Preparation for mechatronic modeling of a complex system.</i>	3	<i>Based on a need defined by specifications, design a complex system;</i> <i>Apply the decomposition into PE-PC-PO;</i> <i>Create the energy chain and the information chain.</i>
5-6	<i>TP 3: Modeling and simulation of the behavior of the system created in TP2.</i>	3	<i>Develop the knowledge model of the energy chain;</i> <i>Carry out modeling of the energy chain;</i> <i>Simulate the system.</i>
7-8	<i>TP 4: Creation of a virtual prototype of the system developed in TP2 and TP3.</i>	3	<i>Create a prototype of a complex system;</i> <i>Validate the characteristics of the different components.</i>
9-12	<i>TP 5: Modeling and simulation of the behavior of a multiphysics system. (Apply the entire mechatronic approach).</i>	6	<i>Create the energy chain and the information chain;</i> <i>Develop the knowledge model of the energy chain;</i> <i>Carry out modeling of the energy chain;</i> <i>Simulate the system.</i> <i>Create a prototype of a complex system;</i> <i>Validate the characteristics of the different components.</i>
13-14	<i>Practical exam</i>	3	<i>Summative evaluation</i>

4- Evaluation methods & Marks Distribution

Type of assessment	Yes No	Tx Weighting
<i>CC - Continuous assessment (Test/Quiz, Presentation, Report, etc.)</i>	<input type="checkbox"/> Yes <input type="checkbox"/> No

Machine control

1. General

Coded	<i>GELMAM5108</i>	Level/Semester	3/S5	Coefficient	3	Credits	3
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	21
Responsible	<i>Jannet JEMAIL</i>					Volume. H. (TP)	21
Module	<i>Machine control</i>					Version	<i>09/2023</i>

Course description (Course objective):

Allow the student to acquire knowledge in the field of intelligent controls of the most used electrical machines: (direct current machine, three-phase asynchronous machine, synchronous machine, etc.) and to manipulate them according to the requirements of the system studied while guaranteeing better performance (speed, precision and stability).

Prerequisites:	Keywords :
<i>Electrotechnics and static converters.</i>	<i>Direct current machines, asynchronous machines, synchronous machines, choppers, rectifiers, inverters, etc.</i>

Specific objectives of the course (OBJ_i):

OBJ 1 : *Understand how rotating machines work (electromechanical transformation).*

OBJ 2 : *Understand speed variation techniques and choose the suitable converter for each machine (operating quadrant, supply voltage).*

OBJ 3 : *Understand the control techniques that make it possible to influence the performance of the controlled system.*

Necessary material :

Electrical machines: Direct current machine, asynchronous machine, synchronous machine, speed variators, computer.

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
---------	------------------------	--------	-------

1-2	General information on rotating machines	3h	Understand the principles of electromagnetism, understand the operation of rotating machines and their constitutions, Characteristics of machines under load (Torque, speed and power)
3-4	Study and modeling of the direct current machine	3h	Model and study the operation of a direct current machine
5-6	DC machine control	3h	Study speed variation techniques, study suitable converters depending on the power supply, study the performance of a system driven by an MCC (speed control, current control, etc.)
7-8	Study and modeling of the asynchronous machine	3h	Understand the operating principle of asynchronous machines as motors and generators, model the asynchronous machine, study transformation matrices (Park matrix, Clark matrix, Concordia matrix)
9-10	Control of the asynchronous machine	3h	- Scalar control of the asynchronous machine -Vector control of the asynchronous machine
11-12	Study and modeling of the synchronous machine	3h	Understand the operating principle of synchronous machines in alternator, model the synchronous machine.
13-14	Synchronous machine control	3h	- Scalar control of the synchronous machine -Vector control of the synchronous machine

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals
1-2	Study and modeling of direct current machines	3h	Model and study the operation of a direct current motor at variable speed by simulating then interpreting the operating curves.
3-4	Separately Excited/Shunt DC Machine Control	3h	Analyze the operation of direct current machines under load, in open loop and closed loop.

			-Analyze and interpret the machine's response.
5-6	Study and modeling of the asynchronous machine	3h	Model and study the operation of an asynchronous motor in variable speed by simulating then interpreting the operating curves.
7-8	Vector control of the asynchronous machine	3h	-Design a speed variator -Understand the components of a speed variator - Analyze the performance of the asynchronous machine.
9-10	Study and modeling of the synchronous machine	3h	Model and study the operation of a synchronous machine in variable speed by simulating then interpreting the operating curves. -Study of the alternator under load
11-12	Synchronous machine control	3h	Study of the stability of synchronous machines
13-14	Practical exam, mini-project defense, ...	3h	Summative evaluation

4- Evaluation methods & Marks Distribution

Type of assessment	Yes No	Tx Weighting
CC – Continuous assessment (Test/Quiz, Presentation, Report, etc.)	<input type="checkbox"/> Yes <input type="checkbox"/> No	
DS – Supervised Duty	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	20%
EE – Written test (Final exam)	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	60%
EP – Practical test (TP- TP exam / MP- Mini project)	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	20%

- Material 100% TP : Average = 20% CC + 80% EP
- 100% CI material : Average = 40% DS + 60% EE
- **CI+TP material : Average = 20% DS + 20% EP + 60% EE**

5- Evaluation criteria

- Authorized documents : Yes x No
- Authorized search engine : Yes x No

- *Criterion 1: Understanding of the content (4 points)*
- *Criterion 2: Application of knowledge (10 points)*
- *Criterion 3: Critical analysis (4 points)*
- *Criterion 4: Clarity and organization (2 points)*

Software for automation

1. General

Coded	<i>GELMAM5109</i>	Level/Semester	3/S5	Coefficient	3	Credits	3
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	21
Responsible	<i>Wafa BOUKADIDA</i>					Volume. H. (TP)	21
Module	<i>Software for automation</i>					Version	<i>09/2023</i>

Course description (Course objective):

The control of discrete servo systems presents a fundamental objective of any study which aims to impose performances that the controlled system must satisfy. The notion of sampling as well as the stability and regulation of such systems will be the objectives of this module.

Prerequisites:	Keywords :
<i>The Laplace transform, continuous linear systems</i>	<i>Sampling, discrete system, stability, regulation and control</i>

Specific objectives of the course (OBJ_i):

OBJ 1 : *Concept of sampling.*

OBJ 2 : *Study of systems in discrete regime and calculation of the transfer function in z*

OBJ 3 : *Stability of discrete systems*

Necessary material :

...

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-3	<i>Concept of sampling</i>	4.5	<i>-Notion of sampling</i> <i>-Fundamental signals sampled</i> <i>-Shannon's theorem</i>

4-7	z transfer function	6	<p>-Notion of the z transform and the inverse z transform</p> <p>- Discreet transfer function and Zero-order blocking sampler</p> <p>-Closed loop transfer function</p>
8-14	Stability and precision	10.5	<p>-Jury criterion and Routh criterion</p> <p>-Study of correctors</p>

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals
1-2	<i>Getting started with Simulink</i>	3	<i>-Initiation to the use of Simulink software.</i>
3-4	The systems sampled	3	<p>- Study of sampled systems and different discretization methods on Matlab</p> <p>-Study of the influence of the sampling period</p>
5-8	Digital control of discrete systems	6	<i>-Control of systems by P, PI and PID regulators</i>
9-12	Control of a DC motor	6	<i>Study of a direct current motor in the continuous regime as well as the discrete one.</i>
13-14	Assessment by a practical exam	3	<i>Summative evaluation</i>

4- Evaluation methods & Marks Distribution

Type of assessment	Yes No	Tx Weighting
<i>CC - Continuous assessment (Test/Quiz, Presentation, Report, etc.)</i>	<input type="checkbox"/> Yes <input type="checkbox"/> No

Modeling, identification and monitoring of systems

1. General

Coded	GELMAM5110	Level/Semester	3/S5	Coefficient	2.25	Credits	3
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	31.5
Responsible	<i>Wafa BOUKADIDA</i>					Volume. H. (TP)	
Module	<i>Modeling, identification and monitoring of systems</i>					Version	09/2023

Course description (Course objective):

The objective of this course is to address these different stages. The modeling of linear systems by state representation will be the first objective. In addition, a presentation and critical analysis of the different structures in parametric estimation will be developed. Among the different estimation methods existing in the scientific literature, the so-called ordinary least squares estimation method based on the minimization of a quadratic criterion is discussed.

Prerequisites:	Keywords :
<i>Laplace transform, Z transform, constant parameter differential equations, basics of random signals and stochastic processes</i>	<i>state representation, stability, identification, least squares method.</i>

Specific objectives of the course (OBJ_i):

- OBJ 1** : *State modeling of linear systems*
- OBJ 2** : *Controllability and observability of systems*
- OBJ 3** : *Identification of industrial processes using the least squares method*

Necessary material :

...

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
---------	------------------------	--------	-------

1-4	State representation of linear systems	9am	-State modeling of linear systems -Study of the stability of linear systems -Passing the state representation to the transfer function.
5-6	Controllability and observability of linear systems	4.5	-Controllability and observability of systems Study of controllable canonical forms.
7-8	Identification of industrial processes	4.5	-Definition of identification -Non-parametric methods
9-14	Identification of industrial processes	13.5	-Model structure in identification: Presentation of structures ARX, ARMA, ARMAX... ----The parametric estimation method of ordinary least squares. -Presentation of the problem, quadratic criterion, minimization of the criterion.

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals
---------	--------------------------	--------	-------

Robotic systems analysis

1. General

Coded	GELMAM 5 107	Level/Semester	3/S5	Coefficient	1.5	Credits	2
Course	Electromechanical Engineering					Volume. H. (CI)	21
Responsible	Wafa BOUKADIDA					Volume. H. (TP)	
Module	Mechanism theory					Version	09/2023

Course description (Course objective):

The Robotic Systems Analysis course aims to provide students with an in-depth understanding of the fundamentals, structure and applications of robotic systems. Through a theoretical and practical approach, students will acquire skills in modeling, geometric, kinematic and dynamic analysis, as well as robot control. We are interested in several types of systems: manipulating arms, mobile robots but also in systems with particular architectures such as simulation platforms, humanoid robots, articulated hands, etc.

Prerequisites: <i>Parameterization and Mechanisms: Orientation, position and transformations, Mechanical connections and constraint equations, Mobility of systems and topology, vector and matrix calculation.</i>	Keywords : <i>Direct Geometric Model (MGD), Inverse Geometric Model (MGI), Direct Kinematic Model (MCD), Inverse Kinematic Model (MCI), Direct Dynamic Models (MDD), Inverse Dynamic Models (MDI), workspace, effector, end organ , manipulator arm, Denavit-Hartenberg (DH) parameterization, singularity, Homogeneous transformation matrix.</i>
---	---

Specific objectives of the course (OBJ_i):

- OBJ 1 :** *Define basic concepts of robotics, including robot structure, degrees of freedom, and types of movements.*
- OBJ 2 :** *Master Robot Modeling Techniques.*
- OBJ 3 :** *Use mathematical tools such as transformation matrices to describe robot movements.*
- OBJ 4 :** *Analyze different control methods, including position, speed, and effort control.*
- OBJ 5 :** *Solve concrete problems related to robotics using appropriate analysis methods.*
- OBJ 6 :** *Develop criteria for evaluating the performance of robotic systems.*

Necessary material :

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	<p>Ch.1: Direct (MGD) and inverse (MGI) geometric models of robots</p> <ul style="list-style-type: none"> ▪ Configuration and Mechanisms ▪ Direct Geometric Model: <ul style="list-style-type: none"> - Denavit-Hartenberg Convention (DH). - Denavit-Hartenberg (DH) parameterization. - Calculation of transformation matrices - Determination of the Direct Model of series systems. ▪ Inverse Geometric Model: <ul style="list-style-type: none"> - Solving the inverse geometric problem. ▪ Exercises and tutorials 	3h	<ul style="list-style-type: none"> - Gain an in-depth understanding of forward and inverse geometric models in the context of robotic systems. - Apply the DH convention - Understand the physical meaning of each parameter in the context of robot movement. - Perform the calculation of transformation matrices for specific configurations.
3-4	<p>Ch.2: Direct (MCD) and Inverse (MCI) Kinematic Model of robots</p> <ul style="list-style-type: none"> ▪ Kinematic Transmission Analysis: ▪ Direct Kinematic Model: <ul style="list-style-type: none"> - Obtaining the Jacobian matrix - Singularities in serial chains. - Singularities in closed chains. ▪ Solving Inverse Models: <ul style="list-style-type: none"> - Inverse kinematics of series chains. - Position control algorithms. ▪ Exercises and tutorials 	3h	<ul style="list-style-type: none"> - Define the direct and inverse kinematic model of a robot. - Understand the concepts of robot position, orientation and configuration. - Solve the Direct and Inverse kinematic model to determine the joint angles required to achieve a specific end-effector position/orientation.
5-6		3h

Course description (Course objective):

Master simulation techniques in order to solve engineering problems that cannot be solved by analytical methods.

Prerequisites:

*Analysis and Algebra of preparatory classes;
Numerical analysis*

Keywords :

*Interpolation functions; finite element methods;
stiffness matrix*

Specific objectives of the course (OBJ_i):

OBJ 1 : *Understand the notion of numerical approximation as well as its quantification.*

OBJ 2 : *Master digital simulation techniques.*

OBJ 3 : *Use and master calculation software.*

Necessary material :

...

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	<i>Introduction to numerical simulation</i>	3 a.m.	<i>Definition of digital simulation b. Applications and importance in solving real problems Master the gaps between the numerical solution and the physical phenomenon to be studied. Presentation of the different numerical errors.</i>

3-4	<i>Differential equations and partial differential equations; Presentation of Numerical Methods for Solving Differential Equations</i>	3h	<i>Presentation of physical models in the form of differential equations</i>
5-8	<i>Finite element method FEM; Interpolation functions</i>	6 a.m.	<i>Principle of FEM and applications in engineering and numerical simulation Presentations of interpolation functions in the different cases: 1D; 2D; 3D</i>
9-11	Application to beam elements (1D case)	4.5 hours	<i>From the mathematical formulation to the equivalent writing of the algebraic (matrix) equation to be solved; determination of the stiffness matrix</i>
12-14	2D solution method lattice elements	4.5 hours	<i>Numerical resolution of 2D problems</i>

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals
1-2	<i>Bending of a beam</i>	3 H	<i>Study of the effect of mesh quality on numerical results</i>
3-4	<i>Hole plate in tension</i>	3 H	<i>Use adaptive meshing technique to ensure accuracy of numerical results</i>
5-6	<i>Thermomechanical study of a heated pipe connection</i>	3 H	<i>Master the transfer of results from the thermal study to the static study to obtain the thermomechanical solution</i>
7-8	<i>Aerostatic simulation of an airplane wing. Determination of pressure and stress profile</i>	3 H	<i>Use the forces from aerodynamic simulation to study the stresses induced in the wing.</i>
9-12	<i>Elastoplastic behavior of a sheet subjected to V-shaped bending</i>	6 a.m.	<i>Simulation of an assembly with non-linear behavior</i>
13-14	<i>Practical exam</i>	3 H	<i>Assessment</i>

Aeroacoustics

1. General

Coded	<i>GELMAero5107</i>	Level/Semester	3/55	Coefficient	1.5	Credits	2
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	21
Responsible	<i>Mortadha GRAA</i>					Volume. H. (TP)	
Module	<i>Aeroacoustics</i>					Version	<i>09/2023</i>

Course description (Course objective):

Aeroacoustics focuses on the study of sound phenomena generated by the interaction between a fluid (usually air) and moving structures, such as airplanes, vehicles, propellers, turbines, etc. This discipline seeks to understand the production, propagation and reception of sound in aerodynamic environments.

Prerequisites:

Fluid mechanics, turbulence, fundamentals of acoustics

Keywords :

Aeroacoustics, convection, Refraction, Curle's analogy, Lighthill's analogy

Specific objectives of the course (OBJ_i):

- OBJ 1 :** *Basic knowledge to overcome the specific difficulties in solving problems in aeroacoustics; such as sound generation and propagation by and in turbulent flow.*
- OBJ 2 :** *Characteristics of the acoustic emission of aircraft turbojets for example.*
- OBJ 3 :** *Physical interpretation of underlying mechanisms and an introduction to the standard estimation models of convection.*
- OBJ 4 :** *Refraction effects associated with the propagation of acoustic waves in shear and non isothermal flows, and of generation of sound due to turbulent fluctuations (aeroacoustics analogy).*

AERODYNAMICS

1. General

Coded	<i>GELMAero5108</i>	Level/Semester	3/S5	Coefficient	1.5	Credits	2
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	21
Responsible	<i>Sami CHATTI</i>					Volume. H. (TP)	
Module	<i>Aerodynamic</i>					Version	<i>09/2023</i>

Course description (Course objective):

Understand the fundamentals of aerodynamics

Prerequisites:

Fluid mechanics

Keywords :

Flow; lift; streak

Specific objectives of the course (OBJ_i):

OBJ 1 : *Understand the fundamentals of aerodynamics*

OBJ 2 : *Study of the impact of aerodynamics on a wing.*

OBJ 3 : *Use and master calculation software.*

Necessary material :

...

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	<i>Introduction to aerodynamics/ Definition of aerodynamics; Basic principles: pressure, temperature, density of air as a function of altitude and speed.</i>	3.	<i>Understand the fundamentals of aerodynamics.</i>

3-6	<i>The Equations of Aerodynamics/ Bernoulli equations; Saint-Coming equation for compressible fluids</i>	6	<i>Understand the fundamental equations that describe the movement of fluids; Analyze flow properties; Generative state;</i>
7-8	<i>Fluid flows/ Calculation of the boundary layer; Mach and Reynolds number Shock waves.</i>	3	<i>Examine flow behavior at high velocities. Understand shock waves and associated phenomena.</i>
9-12	<i>Aerodynamic Profiles/ Symmetrical and asymmetrical profiles; Angle of incidence. Lift and drag coefficient.</i>	6	<i>Study aerodynamic profiles and their characteristics. Understand the generation of lift and drag.</i>
13-14	<i>Aerodynamic characteristics of objects/ Establishing the polars and finesse of the wings</i>	3	<i>Apply aerodynamic concepts to real cases. Study of wing profiles.</i>

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals
6-7	<i>Practical exam</i>	3h	<i>Summative evaluation</i>

Combustion

1. General

Coded	<i>GELMAero5109</i>	Level/Semester	3/S5	Coefficient	2.25	Credits	3
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	21
Responsible	<i>Hichem GAZZAH</i>					Volume. H. (TP)	10.5
Module	<i>Combustion</i>					Version	<i>09/2023</i>

Course description (Course objective):

The “combustion” course presents the fundamental principles of combustion and thermochemistry. A mathematical description of the different types of flame: pre-mixing and diffusion in different laminar and turbulent flow regimes with an application aspect linked to the field of aeronautics.

Prerequisites:	Keywords :
<i>fluid mechanics/thermodynamics/heat transfer</i>	Thermodynamics, combustion, chemical equilibrium, composition, lean/rich combustion, adiabatic temperature, lower calorific value, higher calorific value, laminar premix flames, propagation speeds, flame stabilization, laminar diffusion flames, passive scalar, turbulence, turbojets

Specific objectives of the course (OBJ_i):

- OBJ 1 :** *Know the basic concepts and thermochemical quantities used in combustion*
- OBJ 2 :** *Calculate the adiabatic flame temperature of multicomponent gas mixtures with infinitely fast chemistry, chemical equilibrium, and simplified reactor configurations*
- OBJ 3 :** *Calculate the structure and characteristics of a premixed flame, including flame speed, thickness, quench distance, and minimum ignition energy.*
- OBJ 4 :** *Calculate the structure and characteristics of a diffusion flame, including height, takeoff distance, and blowout limits*
- OBJ 5 :** *Understand the behavior and operation of combustion systems in the field of aeronautics (turbojet engines), including ignition and stabilization problems*
- OBJ 6 :** *Use cutting-edge software to model combustion systems, simulating detailed flame structures.*

Necessary material :

Ansys-Chemkin, Ansys-Fluent, Comsol

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-4	<p><i>Chapter 1: Basic concepts of combustion</i></p> <ul style="list-style-type: none"> • Fuels • Combustion study • Characteristic quantities of stoichiometric combustion • Different types of combustion • Combustion temperature 	6	<p><i>return to mixtures of chemical species and chemical equilibrium; composition at chemical equilibrium; lean/rich combustion; composition of combustion gases; adiabatic flame temperature; lower and higher calorific value, combustion power, smoke-producing power, combustion in excess of air, combustion in lack of air.</i></p>
5-7	<p><i>Chapter 2: Laminar diffusion flame</i></p> <ul style="list-style-type: none"> • Combustion process in diffusion flame • Qualitative analysis of laminar diffusion flames • Diffusion flame theory • Complete solutions of a rapid chemistry flame • Stabilization of diffusion flames 	4.5	<p><i>the structure and characteristics of a diffusion flame, notions of passive scalar, length L_f of the flame adiabatic temperature, stabilization of flames.</i></p>
8-10	<p><i>Chapter 3: Premix Laminar Flame</i></p> <ul style="list-style-type: none"> • Flame structure • Simplified analysis of a 1d laminar premix flame • Factors influencing flame speed • Flame stability 	4.5	<p><i>The structure and characteristics of a premixed flame, one-dimensional equations, propagation speeds; stabilization of flames.</i></p>
11-12	<p><i>Chapter 4: Turbulent Flames</i></p> <ul style="list-style-type: none"> • Introduction to Turbulent Flows • Structure of turbulent premix flames • Structure of turbulent diffusion flames 	3	<p><i>Turbulent flame speed, Length of turbulent flame, Damkohler number, influence of swirls</i></p>

	<ul style="list-style-type: none"> <i>Turbulent flame regimes</i> 		
13-14	<i>Chapter 5: applications using cutting-edge software (Ansys-Fluent, Comsol)</i>	3	<i>model combustion systems, by simulating the detailed structures of flames.</i>

Course Specification

Structural mechanics

1. General

Coded	<i>GELMAero5110</i>	Level/Semester	3/S5	Coefficient	1.5	Credits	2
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	21
Responsible	Ibrahim MLAOUHI					Volume. H. (TP)	
Module	<i>Structural mechanics</i>					Version	09/2023

Course description (Course objective):

The Structural Mechanics course aims to provide students with an in-depth understanding of the fundamental principles of aeronautical structural mechanics. The main objective is to develop the skills necessary to analyze, design and evaluate the resistance of structures used in the aerospace industry in particular, hyperstatic structures (Calculation of hyperstatic (statically indeterminate) structures); Three-moment method; Forces method; Travel methods; Hyperstatic lattices. The main topics covered include structural modeling, elasticity theory, aerodynamic loading, stress and strain, material fatigue, and structural repair methods.

Prerequisites:	Keywords :
<ul style="list-style-type: none"> - Statics of solids - Mechanics of deformable solids / Elasticity, Resistance of materials (RDM2) 	<i>aerospace Structures and Components, Hyperstatic Structures, curvilinear structure, energy method, superposition method.</i>

Specific objectives of the course (OBJ_i):

- OBJ 1 :** *Understand the main concepts of structural mechanics applied to aeronautics.*
- OBJ 2 :** *Develop an in-depth knowledge of the loads and constraints specific to aeronautical structures.*
- OBJ 3 :** *Be able to study and solve a simple, linear or circular hyperstatic structure.*
- OBJ 4 :** *Acquire skills in modeling aeronautical structures.*
- OBJ 5 :** *Apply the principles of stress analysis to evaluate the safety and reliability of aeronautical structures.*
- OBJ 6 :** *Calculate strains and plastic deformations under various loads.*

Necessary material :

General avionics

1. General

Coded	<i>GELMAero5105</i>	Level/Semester	3/S5	Coefficient	1.5	Credits	2
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	21
Responsible	<i>Trabelsi Mohamed AMINE</i>					Volume. H. (TP)	
Module	<i>General avionics</i>					Version	<i>09/2023</i>

Course description (Course objective):

This course consists of studying:

- *Airplane aerodynamics*
- *The constitution of avionics*
- *The operating structure of the system*
- *Integrated modular avionics*

Prerequisites:

- *General knowledge of aircraft aerodynamics*
- *Aircraft command and control systems, manual and automatic piloting*

Keywords :

Lift
Drag strength
Attack nail
Automatic pilot
Control system

Specific objectives of the course (OBJ_i):

OBJ 1 : *Discover the aeronautical world (planes, structures, systems, principle of volume, etc.)*

OBJ 2 : *Become familiar with the A320 and its constituent systems*

OBJ 3 : *Discover the avionics system*

Necessary material :

Audiovisual supports

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	<i>Aerodynamic</i>	3	<i>Have knowledge of aerodynamic forces and volume controls</i>
3-4	<i>Control instruments-1</i>	3	<i>Role and operation of control systems</i>
5-6	<i>Control instruments-2</i>	3	<i>Role and operation of control systems</i>
7-8	<i>Constitution of avionics-1</i>	3	<i>Knowledge of the human/machine interface and specific computerized systems</i>
9-10	<i>Avionics constitution -2</i>	3	<i>Knowledge of the human/machine interface and specific computerized systems</i>
11-12	<i>System security</i>	3	<i>Main system features</i>
11-14	<i>Avionics Management Systems:</i> - <i>Electronic Maintenance Systems (EMS)</i> - <i>Volume Data Management (FDM) Systems</i>	3	<i>Monitor the condition of aircraft electronic components and record volume data for post-volume analysis.</i>

3- Content elements (Practical work)

Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	21
Responsible	<i>Trabeli Mohamed Amine</i>					Volume. H. (TP)	
Module	<i>Radar theory</i>					Version	<i>09/2023</i>

Course description (Course objective):

This course consists of studying:

- *The different types of radars*
- *The principles of radar*
- *Radar functions*
- *Antennas used in radar*

Prerequisites:

- *General knowledge of the different types of radars*
- *Acquire basic knowledge and radar concepts which are then applicable to different types of avionics.*

Keywords :

Transponder; The ILS; VOR; celerity; electromagnetic wave ; speed ; transmission, reception

Specific objectives of the course (OBJ_i):

OBJ 1 : *Acquire the basics of radar theory and the physics of its environment, as well as the associated vocabulary*

OBJ 2 : *Know the different types of current radars and the technologies used*

OBJ 3 : *Identify antenna characteristics and measure speed with Doppler radar.*

Necessary material :

Audiovisual supports

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	<i>The different types of radars -1</i>	3	<i>Have knowledge of the role of different types of radars</i>
3-4	<i>The different types of radars-2</i>	3	<i>Have knowledge of the role of different types of radars</i>
5-6	<i>Principles of operation of radar-1</i>	3	<i>Have knowledge of the different wave frequencies and how to emit pulses of electromagnetic waves, reception and translations into information</i>
7-8	<i>Principles of operation of radar-2</i>	3	<i>Have knowledge of the different wave frequencies and how to emit pulses of electromagnetic waves, reception and translations into information</i>
9-10	<i>Antennas used in radar</i>	3	<i>Knowledge of the different antennas used in aeronautics</i>
11-12	Solid-state <i>emitters</i>	3	<i>Have knowledge of the operation of Transmitters such as air traffic control.</i>
13-14	<i>Radar signal processing...</i>	3	<i>Radar operation and operation</i>

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals
13-14	<i>Final exam</i>	3h	<i>Summative evaluation</i>

4- Evaluation methods & Marks Distribution

Type of assessment	Yes No	Tx Weighting
<i>CC - Continuous assessment (Test/Quiz, Presentation, Report, etc.)</i>	<input type="checkbox"/> Yes <input type="checkbox"/> No	

<i>DS - Supervised Duty</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	40%
<i>EE - Written test (Final exam)</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	60%
<i>EP - Practical test (TP- TP exam / MP- Mini project)</i>	<input type="checkbox"/> Yes <input type="checkbox"/> No	

- *Material 100% TP* : Average = 20% CC + 80% EP
- **100% CI material** : **Average = 40% DS + 60% EE**
- *CI+TP material* : Average = 20% DS + 20% EP + 60% EE

5- Evaluation criteria

- *Authorized documents* : Yes No
- *Authorized search engine* : Yes No
- *Criterion 1: theoretical knowledge (5 points)*
- *Criterion 2: calculation approach (3 points)*
- *Criterion 3: ability to understand and solve a problem (8 points)*
- *Criterion 4: results obtained (4 points)*

Turbomachines and Turbulence

1. General

Coded	<i>GELMAero5112</i>	Level/Semester	3/S5	Coefficient	3	Credits	3
Course	<i>Electromechanics</i>					Volume. H. (CI)	21
Responsible	<i>Ibrahim MLAOUHI</i>					Volume. H. (TP)	21
Module	<i>Turbomachines and turbulence</i>					Version	09/2023

Course description (Course objective):

The application of the laws of fluid mechanics and thermodynamics to energy-producing and mechanical energy-consuming machines using compressible fluids. Control of problems linked to turbomachines during their operations.

As for Turbulence aims to study and model turbulent flows using experimental and numerical methods with emphasis on inhomogeneity and non-stationarity in flows bounded by walls, wakes, jets and other flow configurations.

Prerequisites:	Keywords :
<i>Fluid mechanics, thermodynamics, heat transfer, hydraulic and pneumatic systems</i>	<i>Turbomachines, compressors, turbines, speed triangle, Turbulence, Reynolds equations and tensors, equation model, Kolmogorov theory, energy cascade, turbulent viscosity,</i>

Specific objectives of the course (OBJ_i):

- OBJ 1 :** *Discover the origin and effect of turbulence in industrial and aeronautical environments.*
- OBJ 2 :** *Understanding the properties of turbulence*
- OBJ 3 :** *Distinguish the types of turbomachines (compressors, turbines).*

Necessary material :

...

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. _ HR	Goals
1-4	<p><i>Turbulence</i></p> <ul style="list-style-type: none"> - Importance of turbulence (natural, industrial, aeronautical environments, etc.) - Friction force, C_x, energy dissipation, mixing - Overview of digital approaches: RANS, LES, DNS 	6	Discover the importance of the phenomenon of turbulence
5-6	<p><i>Properties of turbulence</i></p> <ul style="list-style-type: none"> - Scale ranges - Ensemble averages, Reynolds decomposition - Reynolds equations - Reynolds tensors 	3	Present and explain the phenomena. To understand demonstrate the fundamental equations
7-8	<p><i>Turbulence models</i></p> <ul style="list-style-type: none"> - Eddy viscosity models <ul style="list-style-type: none"> • 0-equation models (mixture length) • Models with 1 and 2 equations (k-epsilon, k-omega , ...) - Notions on 2nd order models (RSM, Reynolds-stress models) - Notions on LES (Large Eddy Simulation) models <p><i>Homogeneous turbulence</i></p> <ul style="list-style-type: none"> - Average flow energy balance - turbulent fluctuations - Spectral description - Energy cascade, Kolmogorov theory 	3	Study the phenomenon of turbulence using models of different levels.
9-10	<p><i>Introduction to turbomachines</i></p> <ul style="list-style-type: none"> - Classification. - Layout of the organs of a turbomachine. - Turbomachines (Axial/Radial) 	3	Distinguish the types of turbomachines.
11-12	<p><i>Turbomachine theory</i></p> <ul style="list-style-type: none"> - Thermodynamic Study - Energy characteristics. - Amount of movement, - speed triangles 	3	Establish the characteristic laws governing the operation of turbomachines.
12-14	<p><i>Functioning principles,</i></p> <ul style="list-style-type: none"> - General equations in turbomachines 	3	Study the operation and performance of turbomachines

	<ul style="list-style-type: none"> - Dimensional Analysis and similarity, - characteristic curves, 	<i>using dimensionless parameters.</i>
--	--	--

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. _ HR	Goals
1-2	<i>Turbulent flow profile</i>	3	model and <i>simulate</i> fluids in <i>turbulent flow</i> through different volumes
3-6	<i>Turbulence modeling</i>	6	<i>Create and modify a calculation domain.</i> <i>Choose a modeling strategy.</i> <i>Use turbulence models.</i>
7-8	Aerodynamic simulation specific to turbomachines	3	Mastery of the operation of the main types of turbomachines - Determination of their main technical characteristics
9-10	Digital fluid simulations Study of fluid flows within centrifugal pumps	3	These studies make it possible to validate the sizing and operation of centrifugal pumps.
11-12	Numerical analysis of the fluid-structure interaction of a gas turbine blade profile	3	<i>The numerical study of a flow around a blade of a gas turbine and see the aerodynamic behavior...</i>
13.14	<i>Practical exam, mini-project defense, ...</i>	3	<i>Summative evaluation</i>

4- Evaluation methods & Marks Distribution

Type of assessment	Yes No	Tx Weighting
<i>CC - Continuous assessment (Test/Quiz, Presentation, Report, etc.)</i>	<input type="checkbox"/> Yes <input type="checkbox"/> No	
<i>DS - Supervised Duty</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	20%
<i>EE - Written test (Final exam)</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	60%
<i>EP - Practical test (TP- TP exam / MP- Mini project)</i>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	20%

- *Material 100% TP* : Average = 20% CC + 80% EP
- *100% CI material* : Average = 40% DS + 60% EE
- ***CI+TP material*** : **Average = 20% DS + 20% EP + 60% EE**

5- Evaluation criteria

- *Authorized documents* : Yes No
- *Authorized search engine* : Yes No
- *Criterion 1: Understanding of the content (4 points)*
- *Criterion 2: Application of knowledge (10 points)*
- *Criterion 3: Critical analysis (4 points)*
- *Criterion 4: Clarity and organization (2 points)*

Course Specification

Control non-destructive (CND)

1. General

Coded	<i>GELMMI5110</i>	Level/Semester	3/S5	Coefficient	3	Credits	3
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	21
Responsible	<i>Safa Hraoiech</i>					Volume. H. (TP)	21
Module	<i>Non-Destructive Testing</i>					Version	<i>09/2023</i>

Course description (Course objective):

Nondestructive testing (NDT), also known as nondestructive evaluation (NDE) and nondestructive inspection (NDI), is a multidisciplinary evaluation that blends quality assurance and materials science. NDT is used to inspect and evaluate materials, components, or assemblies without destroying their serviceability. Non-destructive evaluation (NDE) methods Commonly used are: Visual Inspection, Penetrant Testing, Radiography, Ultrasonic, Magnetic Particle, Eddy Current...

Prérequis :	Mots clés :
<i>Materials science</i>	<i>Evaluate, properties of a material, surface discontinuities, methods</i>

Objectifs spécifiques du cours (OBJ_i) :

- OBJ 1 :** *Definition of NDT, uses of NDT, objectives*
- OBJ 2 :** *Presentation of the most frequently used test methods*
- OBJ 3 :** *Advantages and limitations of each method*

Matériel nécessaire :

Flash lamp, Penetrant, Developer.

2- Éléments de contenu (Cours)

Semaine(s)	Chapitres/Éléments de contenu	Nbr. HR	Objectif(s) visés
1-2	<i>Introduction of Nondestructive testing</i>	3h	<i>Definition of the process</i>

			Presentation of different types of flaws such as a crack or porosity
3-6	<i>Practical work on Visual inspection and penetrant testing</i>	3h	<i>How to use the flash lamp to find the cracks</i> <i>Description of results of a penetrant testing</i>
6	<i>Presentation (project)</i>	3h	<i>Presentation of a method of the NDT as a project</i>
7	<i>Eddy current testing</i>	3h	<i>Principle of the proposed method</i> <i>Uses</i> <i>Advantages and limitations</i> <i>Interpretation of the results</i>
8	<i>Ultrasonic testing</i>	3h	
9	<i>Exercises + Radiography testing</i>	1.5h	
10	<i>Computerized tomography CT scan</i>	1.5h	
11	<i>Infrared (IR) thermography</i>	1.5h	
12	<i>Revision for the final exam</i>	1.5h	

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals
2	<i>Visual inspection</i>	3h	<i>Description of the method, tools</i> <i>Limitations</i>
3	<i>Penetrant testing and revision</i>	3h	<i>Principle</i> <i>Uses and limitations</i> <i>Application examples</i>
5	<i>Magnetic particle inspection</i>	6am	<i>Principle of the MT method</i> <i>Advantages, uses, tools and limitations</i>
4	<i>Practical work on Visual inspection and penetrant testing</i>	6am	<i>How to use the flash lamp to find the cracks</i> <i>Description of results of a penetrant testing</i>
	<i>Practical exam</i>	3	<i>Summative evaluation</i>

4- Evaluation methods & Marks Distribution

Type of assessment	Yes No	Tx Weighting
CC - Continuous assessment (Test/Quiz, Presentation, Report, etc.)	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
DS - Supervised Duty	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	20%
EE - Written test (Final exam)	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	60%
EP - Practical test (TP- TP exam / MP- Mini project)	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	20%

- Material 100% TP : Average = 20% CC + 80% EP
- 100% CI material : Average = 40% DS + 60% EE
- **CI+TP material** : **Average = 20% DS + 20% EP + 60% EE**

5- Evaluation criteria

- Authorized documents : Yes No
- Authorized search engine : Yes No
- Criterion 1: Preparation of the project (PPT, speech) (8 points)
- Criterion 2: Presentation of the proposed method (Description of the principle, examples, uses, limitations) (8 points)
- Criterion 3: Use of descriptive figures and videos (4 points)

Real time Automatic

1. General

Coded	<i>GELMMI5109</i>	Level/Semester	3/S5	Coefficient	3	Credits	3
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	21
Responsible	<i>Anouer BEN AMOR</i>					Volume. H. (TP)	21
Module	<i>Automatic in real time</i>					Version	<i>09/2023</i>

Course description (Course objective):

Understand the problem of automatic control, provide tools and methods to analyze industrial systems, synthesize/design correctors

Prerequisites:

Programmable robot

Keywords :

Timed automata, hybrid automata

Specific objectives of the course (OBJ_i):

OBJ 1 : *Controller synthesis*

OBJ 2 : *Control and formal analysis of scheduling*

OBJ 3 : *Calculation of winning strategies*

Necessary material :

...

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-4	<i>Introduction to formal methods for verifying real-time systems</i>	6	<i>Integration of formal methods in the real-time systems development process</i>
4-8	<i>Timed automata</i>	6	<i>Abstractions of timed state spaces</i>
9-14	<i>Controller synthesis</i>	9	<i>Controller synthesis</i>

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals
1-6	Control and formal analysis of scheduling;	9	Control and formal analysis of scheduling
7-12	Controller synthesis	9	Controller synthesis
13-14	<i>Practical exam</i>	3h	<i>Summative evaluation</i>

4- Evaluation methods & Marks Distribution

Maintenance tools

1. General

Coded	<i>GELMMI5104</i>	Level/Semester	3/S5	Coefficient	2.25	Credits	3
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	31.5
Responsible	<i>Mahdi CHEHATA</i>					Volume. H. (TP)	00
Module	<i>Maintenance tools</i>					Version	09/2023

Course description (Course objective):

Be able to master the different maintenance tools in order to implement and succeed in an adequate maintenance strategy with the company's work focus while promoting full collaboration with the various stakeholders

Prerequisites:

- *Reading flowcharts, grafkets, flowcharts,*
- *Non-destructive testing*
- *Maintenance methods and times*
- *Quality concepts*

Keywords :

Quality, NDT, organization charts, corrective, preventive maintenance, physico-chemistry of maintenance

Specific objectives of the course (OBJ_i):

OBJ 1 : *Master the different maintenance strategies*

OBJ 2 : *Know and apply the different concepts and terminologies of corrective maintenance*

OBJ 3 : *Know how to determine the frequency of preventive interventions*

OBJ 4 : *Know and apply maintenance documentation*

OBJ 5 : *Master and apply NDT as well as standard forms of equipment degradation; thus their means of prevention.*

Necessary material :

- *UltNoneonic probe,*
- *Thickness gauge,*
- *Thermal camera,*
- *Penetrant product,*

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	Corrective maintenance tools	4.5	Promote the success of a repair
3-6	Implementation of preventive maintenance	9	Succeed in preventative logistics
7-10	Maintenance tools	9	Master the standard preventive maintenance tools
11-14	FMEA – role and implementation	9	Apply and master the FMEA

3- Content elements (Practical work)

Repair techniques

1. General

Coded	GELMMI5105	Level/Semester	3/S5	Coefficient	2.25	Credits	3
Course	Electromechanical Engineering					Volume. H. (CI)	10.5
Responsible	Mahdi CHEHATA					Volume. H. (TP)	21
Module	Repair techniques					Version	09/2023

Course description (Course objective):

Be able to implement and successfully implement a set of commonly encountered repair techniques and apply them in order to resume production as quickly as possible

Prerequisites:

- Reading standard drawings and illustrations given by suppliers and designers
- Calculation and sizing of mechanical structures
- Maintenance strategies and levels

Keywords :

Rolling, curative maintenance, reloading of structures, bearing, alignment, assembly and disassembly graphs

Specific objectives of the course (OBJ_i):

OBJ 1 : *Improve the skills of the maintenance manager*

OBJ 2 : *Master standard maintenance tasks*

OBJ 3 : *Be able to select the approach to follow in a curative intervention.*

Necessary material :

MIG MAG welding station - Steel structure and profile - Alignment bench - double dial indicators - Bearing assembly and disassembly bench - Sets of standard mechanical tools - Sets of thin shims for alignment - camera thermographic -

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1	Maintenance repair position	1.5	Master standard maintenance tasks
2-3	The order of assembly and disassembly	3	

4	<i>Bearing assembly</i>	1.5	
5	<i>Aligning rotating machines</i>	1.5	
6.7	<i>Arc reloading technique</i>	3	

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals
1	<i>View and familiarize yourself with the available tools</i>	1.5	<i>Identify available tools</i>
2	<i>Handle and understand tools correctly</i>	1.5	<i>Avoid bodily accidents</i>
3-4	<i>Read an overall drawing of a mechanism and understand its mode(s) of operation</i>	3	<i>Know the performance of a mechanism</i>
5-6	<i>Carry out the disassembly and disassembly of a mechanism</i>	3	<i>Carefully carry out disassembly and assembly operations</i>
7	<i>Install a rigid bearing</i>	1.5	<i>Master the assembly of a bearing</i>
8	<i>Dismantle a rigid bearing</i>	1.5	<i>Master the disassembly of a bearing</i>
9	<i>Assembling and dismounting a separable ring tapered bearing</i>	1.5	<i>Master the handling of a tapered bearing</i>
10	<i>Visually examine a tree line</i>	1.5	<i>Thermo graphically read a tree line</i>
11	<i>Align two rotating machines by sight</i>	1.5	<i>Use feeler gauges and a ruler to align 2 rotating machines</i>
12	<i>Use the method – inverted comparators – to align two rotating machines</i>	1.5	<i>Use the graphical method for alignment</i>
13	<i>Reloading a metal structure by welding</i>	1.5	<i>Use MIG-MAG welding for surfacing.</i>
14	<i>practical exam,</i>	1.5	<i>Summative evaluation</i>

4- Evaluation methods & Marks Distribution

Machine control

1. General

Coded	<i>GELMMI5108</i>	Level/Semester	3/S5	Coefficient	3	Credits	3
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	21
Responsible	<i>Jannet JEMAIL</i>					Volume. H. (TP)	21
Module	<i>Machine control</i>					Version	<i>09/2023</i>

Course description (Course objective):

Allow the student to acquire knowledge in the field of intelligent controls of the most used electrical machines: (direct current machine, three-phase asynchronous machine, synchronous machine, etc.) and to manipulate them according to the requirements of the system studied while guaranteeing best performance (speed, precision and stability).

Prerequisites:

Electrotechnics and static converters.

Keywords :

Direct current machines, asynchronous machines, synchronous machines, choppers, rectifiers, inverters, etc.

Specific objectives of the course (OBJ_i):

OBJ 1 : *Understand how rotating machines work (electromechanical transformation).*

OBJ 2 : *Understand speed variation techniques and choose the suitable converter for each machine (operating quadrant, supply voltage).*

OBJ 3 : *Understand the control techniques that make it possible to influence the performance of the controlled system.*

Necessary material :

Electrical machines: Direct current machine, asynchronous machine, synchronous machine, speed variators, computer.

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	<i>General information on rotating machines</i>	3h	<i>Understand the principles of electromagnetism, understand the operation of rotating machines and their constitutions, Characteristics of machines under load (Torque, speed and power)</i>
3-4	<i>Study and modeling of the direct current machine</i>	3h	<i>Model and study the operation of a direct current machine</i>
5-6	<i>DC machine control</i>	3h	<i>Study speed variation techniques, study suitable converters depending on the power supply, study the performance of a system driven by an MCC (speed control, current control, etc.)</i>
7-8	<i>Study and modeling of the asynchronous machine</i>	3h	<i>Understand the operating principle of asynchronous machines as motors and generators, model the asynchronous machine, study transformation matrices (Park matrix, Clark matrix, Concordia matrix)</i>
9-10	<i>Control of the asynchronous machine</i>	3h	<i>- Scalar control of the asynchronous machine -Vector control of the asynchronous machine</i>
11-12	<i>Study and modeling of the synchronous machine</i>	3h	<i>Understand the operating principle of synchronous machines in alternator, model the synchronous machine.</i>
13-14	<i>Synchronous machine control</i>	3h	<i>- Scalar control of the synchronous machine -Vector control of the synchronous machine</i>

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals
1-2	<i>Study and modeling of direct current machines</i>	3h	<i>Model and study the operation of a direct current motor at variable speed by</i>

			<i>simulating then interpreting the operating curves.</i>
3-4	<i>Separately Excited/Shunt DC Machine Control</i>	3h	<i>Analyze the operation of direct current machines under load, in open loop and closed loop. -Analyze and interpret the machine's response.</i>
5-6	<i>Study and modeling of the asynchronous machine</i>	3h	<i>Model and study the operation of an asynchronous motor in variable speed by simulating then interpreting the operating curves.</i>
7-8	<i>Vector control of the asynchronous machine</i>	3h	<i>-Design a speed variator -Understand the components of a speed variator - Analyze the performance of the asynchronous machine.</i>
9-10	<i>Study and modeling of the synchronous machine</i>	3h	<i>Model and study the operation of a synchronous machine in variable speed by simulating then interpreting the operating curves. -Study of the alternator under load</i>
11-12	<i>Synchronous machine control</i>	3h	<i>Study of the stability of synchronous machines</i>
13-14	<i>Practical exam, mini-project defense, ...</i>	3h	<i>Summative evaluation</i>

4- Evaluation methods & Marks Distribution

Safety of industrial installations

1. General

Coded	<i>GELMMI5106</i>	Level/Semester	3/S5	Coefficient	2.25	Credits	3
Course	<i>Electromechanical Engineering</i>					Volume. H. (CI)	31.5
Responsible	<i>Kais TELILI</i>					Volume. H. (TP)	
Module	<i>Safety of industrial installations</i>					Version	<i>09/2023</i>

Course description (Course objective):

The security of industrial installations is a crucial aspect to ensure the safety of people, property and the environment in the context of industrial activities. It encompasses a wide range of measures aimed at preventing accidents, incidents and failures which could lead to adverse consequences. Here are some key principles and areas of importance in industrial facility security:

Prerequisites:	Keywords :
<i>Reliability, Electric circuit, Electrotechnics</i>	<i>Safety, fire, risk...</i>

Specific objectives of the course (OBJ_i):

OBJ 1 : *Identification of potential hazards, quantification of risks and implementation of measures to mitigate them.*

OBJ 2 : *Implement an effective security management strategy (Design, management, monitoring and intervention)*

OBJ 3 : *Apply continuous improvement approaches to implement corrective measures*

Necessary material :

...

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	Risk Assessment: In-depth assessments of facility risks. (FMEA Security)	3	Identification of potential hazards, quantification of risks and implementation of measures to mitigate them.
3-4	Safety management: the establishment of appropriate policies, procedures and management systems. <ul style="list-style-type: none"> - Staff training, - Security awareness and effective communication of security-related information. 	3	Implement an effective security management strategy
5-6	Safe design: Industrial installations must be designed to minimize risks: <ul style="list-style-type: none"> - Use of safe technologies, - Implementation of integrated security systems and compliance with current standards and regulations. 	3	Integrate security into design thinking
7-8	Monitoring and maintenance: <ul style="list-style-type: none"> - Continuous monitoring to detect any sign of failure or potential problem (exploitation of indicators such as MTBF, MTTR.) - Planning a regular maintenance program is essential to ensure the proper functioning of equipment and reduce the risk of failure. 	3	Plan to set up a permanent monitoring system
9-10	Detection and alarm systems: Implementation of detection and alarm systems is crucial to warn personnel in the event of an imminent incident (gas detectors, automatic fire extinguishing systems, etc.).	3	installation of fire detection systems
11-12	Emergency Response Plan <ul style="list-style-type: none"> - Detailed emergency response plans to deal with any critical situation such as the staff evacuation plan, 	3	Anticipate critical situations and intervention plans

	- incident management, coordination with local authorities, etc.		
13-14	Incident analysis: In the event of an incident, it is essential to conduct an in-depth analysis to understand the underlying causes and implement corrective measures to avoid a recurrence (cause and effect, 5P, etc.)	3	an in-depth analysis of incidents for the implementation of corrective measures

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals
...
...
12	Practical exam, mini-project defense, ...	3h	Summative evaluation

language module sheets

Process of test of placement LANGUAGES (English & French)

➤ New students :

✓ **Registration & Admission**

All the new students has their admission has the PI register in line via a platform dedicated to the passage of tests level of languages “MyEPIADMISSION”

They provide of the information personal such that their name, their address E-mail And their number of CIN ..

✓ **Planning & Passage of Test of level :**

A times registered, THE students receive a confirmation registration And are scheduled For pass the tests in English And in French

THE tests are planned In THE labs of LANGUAGES .They pass THE test of language on PC (MCQ) Who evaluate their SKILLS linguistics

✓ **Fix of the Testing of level :**

THE tests are corrected automatically by the software And the results are generated instantly once that THE test East finished.

THE results are analyzes For determine the level of language of each student .

✓ **Attribution of the levels of language :**

THE levels are based on of the standards international such that THE frame European common of reference For the LANGUAGES (CEFR)

✓ **Ranking In the groups of LANGUAGES & Notification of the results :**

In function of their level of language, THE students are assigned has of the groups of language appropriate.

These groups can be constituted in function of level :

- 1- Beginner =A
- 2- Intermediate =B
- 3- Advanced = C

✓ **Notification of the results ;**

THE students receive their results via the app And Who understand their level of language And their assignment has A band specific

THE students are Next affected In their groups of language according to THE jobs of LANGUAGES displayed on the app

Follow up And assessment :

THE progress of the students are followed All At long of their course learning

Of the assessment periodicals are carried out such that (projects PPT , tests oral, exercises ..) For adjust their progression in function of their needs .

These process guarantee a assessment precise of level of language of the students And their assignment has of the course appropriate For to favor their learning linguistic

Former students:

Transition of former students from one level to another:

For language levels (former 23.24 => 24.25)

Initial level = A & Average 23.24 <13 → Level A (24.25)
Initial level = A & Average 23.24 >13 → Level B (24.25)
** Initial level = B & Average 23.24 <13 → Level B (24.25)
** Initial level = B & Average 23.24 >13 → Level C (24.25)
**Level C =>15 → Level C (24/25)

Coded	EN-ABC	Level/Semester	3-4	Coefficient	1.5	Credits	2
Course	Engineering					Volume. H. (CI)	21
Responsible	Sami MZOUGHJ					Volume. H. (TP)	0
Module	Languages & Communication					Version	09/2023

Course description (Course objective):

A-level French courses aim to develop the student's ability to understand the essential points of a message written in clear, standard language. The course materials are taken from Inspire 3, a DELF manual. They also aim to prepare the student to produce simple and coherent speeches on familiar subjects. Oral is preferred in all sessions.

Prerequisites:

*Understand simple, decontextualized sentences.
Communicate in a simple way.*

Keywords :

Understand, listen, communicate, react

Specific objectives of the course (OBJ_i):

- OBJ 1 :** *Understand the materials and respond to instructions.*
- OBJ 2 :** *Participate orally in debates around the proposed subject.*
- OBJ 3 :** *Form a personal opinion.*

Necessary material :

Sound recording / JBL

2- Content elements (Course)

Week(s)	Chapters/Content Items	#HR	Goals
1-2	<i>1st unit: Is it possible to be different and live together ?</i>	<i>3 hours</i>	<ul style="list-style-type: none"> - <i>talking about oneself</i> - <i>understand others.</i> - <i>explain cultural differences.</i>

3-4	<i>2nd Unit: Are we all journalists?</i>	3 hours	<ul style="list-style-type: none"> - talk about information professions. - transmit information. - question the information.
5-6	<i>3rd Unit: Why do we travel?</i>	3 hours	<ul style="list-style-type: none"> Tell about an experience. - talk about tourism - think about the trip.
7-8	<i>4th Unit: Describing a profession</i>	3 hours	<ul style="list-style-type: none"> - collect information about a profession. - talk about responsibilities. - the skills required for each profession.
9-11	5th Unit: Organize a remote activity	4.5 hours	<ul style="list-style-type: none"> - discuss teleworking. - understand the advantages and challenges of managing remote activities.
12-14	6th Unit: Can we fight inequalities?	4.5 hours	<ul style="list-style-type: none"> - tell about a commitment. - to give his opinion. - talk about inequalities.

French (Level B)

1. General

Coded	EN-ABC	Level/Semester	3-4	Coefficient	1.5	Credits	2
Course	Engineering					Volume. H. (CI)	21
Responsible	Sami MZOUGHJ					Volume. H. (TP)	0
Module	Languages & Communication					Version	09/2023

Course description (Course objective):

Level B courses set the objectives of understanding audio documents, understanding press articles and other authentic texts. Written production sessions are also on the program to introduce the student to the code of writing by inviting them to write various texts. The course materials are taken from Inspire 4, a DELF manual.

Prerequisites:

The student can understand isolated sentences and frequently used expressions. He can also communicate orally and describe his training using simple means, and address some subjects that concern him closely.

Keywords :

Understand, communicate, describe, discuss subjects.

Specific objectives of the course (OBJ_i):

- OBJ 4 :** *Understand the educational documents specific to each lesson.*
- OBJ 5 :** *Take a position on the subjects or problems raised by the materials.*
- OBJ 6 :** *Imagine other ways of acting.*

Necessary material :

Paper version documents / Sound recordings / JBL

2- Content elements (Course)

Week(s)	Chapters/Content Items	#HR	Goals
1-2	<i>Does work have the same meaning today?</i>	<i>3 hours</i>	<i>. explain professional trends</i>

			<ul style="list-style-type: none"> . analyze the workplace. .reveal professional taboos.
3-4	How is technology transforming our lives?	3 hours	<ul style="list-style-type: none"> - improve a living space. - take a position on virtual meetings. - imagine new worlds.
5-6	Can we still save the planet?	3 hours	<ul style="list-style-type: none"> - make an inventory of pollution. -alert the public to a risk. -propose solutions
7-8	Is politics everyone's business?	3 hours	<ul style="list-style-type: none"> - define rights and duties. - defend a commitment. - question the right to vote.
9-11	Are we prisoners of our appearance?	4.5 hours	<ul style="list-style-type: none"> - tell of discrimination. -imagine the human of the future. - talk about your appearance.
12-14	Is happiness utopian?	4.5 hours	<ul style="list-style-type: none"> - give a definition of happiness. - analyze preconceived ideas. - envision happiness.

Course Specification

French (Level C)

1. General

Coded	EN-ABC	Level/Semester	3-4	Coefficient	1.5	Credits	2
Course	Engineering					Volume. H. (CI)	21
Responsible	Sami MZOUGHJI					Volume. H. (TP)	0
Module	Languages & Communication					Version	09/2023

Course description (Course objective):

The French Communication Techniques course, at level C, aims to develop three skills in the student: Comprehension of writing (CE), Oral production (PO) and Written production (PE), with a view to preparing them for the DELF exam.

The course material is generally a paper version document which offers various educational activities, relating to the materials. The role of the teacher is to provide the student with a certain autonomy in the search for answers. The supports are those of DELF B 2, 2nd Edition - 100% SUCCESS.

Prerequisites:	Keywords :
In principle, the student should have the following abilities: understand the essential points of a discussion, a text, a press article when the language used is clear and standard and when it concerns familiar subjects having relates to the daily life of the student.	<i>Understand, listen well, interact</i>

Specific objectives of the course (OBJ_i):

OBJ 7 : Make reading hypotheses and generally understand the content of a document.

OBJ 8 : Enter message scopes.

OBJ 9 : React to messages.

OBJ 10 : For PE, acquire a methodology allowing successful written productions.

Necessary material :

Paper version documents - Sound recordings - JBL

2- Content elements (Course)

Week(s)	Chapters/Content Items	#HR	Goals
1-2	<i>CE: How to read a text? / A set of short texts. PE: Analysis of the instructions / Different statements of written production</i>	3 hours	<i>Help the student understand various texts. Understand what is required by the instructions.</i>
3-4	<i>CE: Analysis of positions/testimonies PE: Learn to present a situation, facts / Various texts.</i>	3 hours	<i>Identification of tone, point of view. Learn to identify a situation, facts</i>
5-6	<i>CE: Search for relevant information / Various texts. PE: Expression of personal opinion / PE topics.</i>	3 hours	<i>Identification of the content of a text. Help to formulate ideas, to qualify your comments, to formulate proposals</i>
7-8	<i>informative text : its content, its characteristics. PE: Text production / Writing workshop.</i>	3 hours	<i>Enter the content of a text and report it in writing. PE: Master the structure of the text to be produced.</i>
9-11	<i>CE: The argumentative text / Various texts PE: Writing a formal letter. / Written production instructions.</i>	4.5 hours	<i>CE: Learn to recognize an argumentative text and gNonep its specific features. PE: Learn the formal characteristics of the letter.</i>
12-14	<i>CE: Analysis of points of view / Written testimonies</i>	4.5 hours	<i>Recognize the different positions and their nuances.</i>

English (A level)

1. General

Coded	ENG-ABC	Level/Semester	3-4	Coefficient	1.5	Credits	2
Course	Engineering					Volume. H. (CI)	21
Responsible	Sawcen LAAMIRI					Volume. H. (TP)	0
Module	Languages & Communication					Version	09/2023

Course description (Course objective):

Whether you already have some basic English or are completely new to it, our English program is divided into three levels (A, B and C). At the start of the academic year, your teacher will define your objectives with you and test your level during an initial assessment in order to help you integrate one of the three levels.

- You will be able to acquire or strengthen your basics in business English as well as your self-confidence.
- You will review and learn the grammatical, oral and written basics.
- You will learn to communicate orally and in writing and you will enrich your vocabulary.
- You will be able to respond orally and follow a conversation.

Prerequisites:

Level A : No specific knowledge necessary

Keywords :

Business English

Specific course objectives (OBJ):

OBJ 11 : Oral expression : acquisition of vocabulary relating to working English
(Business English)

OBJ 12 : Written expression : writing letters, messages, formats, references, abbreviations, etc.

OBJ 13 : The fundamentals : tense, auxiliaries, adjectives, comparatives, pronouns

Necessary material :

The printed course purchased from the printing, data show and baffles service

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	The working day	3h	Vocab: Company departments(ex: HR, PR, finance) and job titles(ex: production manager) Gr: present simple and present continuous
3-4	Corporate culture	3h	Vocab: corporate culture vocabulary and asking for information Gr: collocations
5-6	Developing contacts	3h	Networking vocabulary, present perfect and past simple tenses
7-8	Cultural issues	3h	Cultural awareness, marketing in china and business in Finland vocabulary
9-10	Teamwork	3h	Describing a team, slogans, team-building and verbs with their corresponding nouns and adjectives
11-12	Job applications	3h	How to write a CV, a letter of application and wait for an interview
13-14	Revision	3h	Tenses and vocabulary of all chapters

3- Evaluation methods & Marks Distribution

Business English

Specific course objectives (OBJ):

OBJ 14 : Oral expression : acquisition of vocabulary relating to working English
(Business English)

OBJ 15 : Written expression : writing letters, messages, formats, references, abbreviations, etc.

OBJ 16 : The fundamentals : tense, auxiliaries, adjectives, comparatives, pronouns

Necessary material :

The printed course purchased from the printing, data show and baffles service

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	<i>Job description and job satisfaction</i>	3h	<i>Vocab: Company departments, corporate culture vocabulary</i> <i>Gr: asking questions at a job interview</i>
3-4	<i>Letters of enquiry and applications</i>	3h	<i>Vocab : How to write a letter of enquiry and an email of application</i> <i>Gr: complex questions</i>
5-6	<i>Promotional activities and branding</i>	3h	<i>The 15 different promotional activities, the power of brands, supermarkets' own brands</i>
7-8	<i>Presenting your business idea</i>	3h	<i>Vocab : Structuring a presentation, signalling the parts of a presentation, making the most presentations</i> <i>Gr: modal verbs</i>
9	<i>Business meetings</i>	1h30	<i>Vocab: Why have meetings? purpose, benefits, importance of team discussions</i> <i>Gr: use of "too" and "enough"</i>
10-11	<i>Customer loyalty</i>	3h	<i>Vocab: the factors which make customers loyal to a company, words and definitions</i> <i>Gr: relative pronouns</i>
12-13-14	<i>Révision</i>	4h30	<i>Revision of the tenses and vocabulary of all chapters</i>

3- Methods evaluation & marks Distribution

Type of assessment	Yes No	Tx Weighting
<i>CC - Continuous assessment (Test/Quiz, Presentation, Report, etc.)</i>	<input type="checkbox"/> Yes <input type="checkbox"/> No

English (level C)

1. General

Coded	ENG-ABC	Level/Semester	3-4	Coefficient	1.5	Credits	2
Course	Engineering					Volume. H. (CI)	21h
Responsible	Sawcen LAAMIRI					Volume. H. (TP)	0
Module	Languages & Communication					Version	09/2023

Course description (Course objective):

Improve your English to communicate in writing and orally in a professional classroom context, and prepare for the TOEIC test (Test of English for International Communication). Prepare to improve your TOEIC score in 18 hours of lessons.

TOEIC teaching resources and methods:

Table, internet access. Interactivity with the teacher. Refresher, time management strategy, practical exercises, mini tests targeted to student needs, detailed corrections. Review of progress made. Tips and revision strategy before the exam.

Composition: 200 multiple choice questions (MCQ)

- 100 oral comprehension questions with audio support (4 exercises, duration 45 minutes)
- 100 written comprehension questions (3 exercises, duration 75 minutes)
 - ⇒ The TOEIC is based on authentic examples taken from international professional situations (meetings, travel, telephone, etc.)

Results: a distinct assessment of oral comprehension and written comprehension

- a score of 5 to 495 points for each
- a total score between 10 and 990 points

Prerequisites:	Keywords :
Level C : This course is intended for all students registered at level C in order to take the TOEIC exam	TOEIC , time management, oral and written

Specific course objectives (OBJ):

- OBJ 17 :** *Prepare in the best conditions for taking the TOEIC*
- OBJ 18 :** *Master the essential points of grammar and conjugation*
- OBJ 19 :** *Enrich your vocabulary*
- OBJ 20 :** *Improve your oral and written comprehension*

Necessary material :

The printed course purchased from the printing, data show and baffles service

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	Detailed overview of the exam	3h	<ul style="list-style-type: none"> • General presentation of the test and its objectives. • Detailed breakdown of the test: written part/oral part. ⇒ Complete mock test in real time, complete and detailed correction
3-4	Assessment of student level and revisions	3h	<ul style="list-style-type: none"> • Review of current knowledge, strengths and areas for improvement. • Consolidation at the level of fundamental grammatical structures ⇒ Fill-in-the-blank exercises, multiple choice questions, reformulation exercises
5-6-7	Preparation for the oral comprehension part	4h30	<ul style="list-style-type: none"> • Listening and reconstitution of professional dialogues. • Improved oral comprehension. • Vocabulary recognition • Understand the story of a current event or a news item: know how to distinguish the main elements (date, place, actions, etc.).
8-9-10	Improvement of written comprehension	4h30	<ul style="list-style-type: none"> • Work on enriching everyday vocabulary • Work to enrich professional and commercial vocabulary. • Know how to read and analyze documents used in professional

			<i>situations: e-mails, summaries, reports, notices, etc.</i>
11-12-13-14	Final mock test	6h	<ul style="list-style-type: none"> Real exam situation to evaluate and validate your progress. Detailed correction

PFA (end of year project)

1. General

Coded	<i>TV-402</i>	Level/Semester	4/08	Coefficient	3	Credits	3
Course	<i>engineer</i>					Flight. H. (CI)	
Responsible	<i>educational manager</i>					Flight. H. (TP)	42h
Module	<i>PFA (end of year project)</i>					Version	09/2023

Course description (Course objective):

- The PFA (End of Year Project) is a project which lasts one semester, which resolves a problem and which must be defended in front of a jury.
- This project is an opportunity for the student to prepare themselves to know how to write a report, present their work, to highlight it and to improve their skills
- PFAs start from the second semester and will end on the exam week of the second semester.
- Each student is expected to contact one of these teachers for supervision
- All 4th year engineering students must be called to a meeting with their educational supervisors and the head of the internship service so that they are properly oriented respectively: Pedagogically and administratively.
- PFA internships must be validated at the end of a defense which is carried out following the submission of a report and an internship certificate duly completed by the company supervisor.
- The teacher (school tutor) helps the student to refine the end-of-year project. He provides educational support to the student (working methodology, definition of the problem or mission, establishment of the plan, writing of the report, etc.)

Prerequisites:	Keywords :
...	...

Specific objectives of the course (OBJ_i):

- OBJ 1 :** *Discover the industrial world*
- OBJ 2 :** *Solve a problem*
- OBJ 3 :** *Writing of the report*
- OBJ 4 :**

Necessary material :

...

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	<i>Discover society (observation and learning)</i>	6h	Read all documents relevant to the internship related to the company and the project Learn the tools and software used in the business. Meeting with the team and supervisor Introduction to projects and internship objectives
2-4	<i>Define the problem and objectives</i>	9h	identification of the tasks to be accomplished. Taking inventory of all the missions to be carried out is necessary to be sure of achieving your objective on time. Observe operations in the field Make a project schedule
5-8	<i>The realization of the project</i>	9h	all tasks will be accomplished and the project will come to life. You have to ensure that everything goes as planned and that the objectives are achieved.
	<i>Autonomy and responsibility</i>		Take more responsibility in the project Work more independently Regularly take into account the progress of tasks Work collaboratively with other team members
9-11	<i>Evaluation of the achievement and proposal of improvement actions</i>	9h	<i>Study of the effectiveness of the achievement and compare with the objective</i> <i>Check the work accomplished with the supervisor</i>
12-14	<i>Close the work and propose forecasts</i>	9h	<i>Prepare an internship report</i>

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals
...
...
14	<i>Practical exam, mini-project defense, ...</i>	3h	<i>Summative evaluation</i>

4- Evaluation methods & Marks Distribution

- ✚ *The student must submit a PFA report with a monitoring sheet signed by their educational supervisor in order to validate authorization for submission on time.*
- ✚ *In the absence of an internship certificate on the day of the defense, the jury will not accept the student and consequently the student will have a zero (unless the student brings back an authorization signed by the internship service)*
- ✚ *The evaluation is carried out by at least two members of the jury (supervisor, jury 1)*
- ✚ *The evaluation is also done by assigning grades on a well-detailed report which is validated by the department head and the director.*
- ✚ *Among the evaluation criteria: Oral Expression, Rigor of the approach, content of the presentation, Discussion, Behavior and attendance, structure and content of the report, etc.*

5- Evaluation criteria

Written report (5pts)
Oral Presentation (5pts)
Mastery of the subject (5pts)
Project objective (5pts)

ESB Entrepreneurship and Small Business

1. General

Coded	TV-503	Level	5/S1	Coefficient	1.5	Credits	2
Course	<i>Engineering</i>					Volume. H. (CI)	21
Responsible	<i>Moez ZOUARI</i>					Volume. H. (TP)	0
Module	<i>ESB</i>					Version	09/2023

Course description (Course objective):

The objective of the course is to master small business entrepreneurial skills and understand its different functions.

The ESB certification is designed to test and validate fundamental concepts and knowledge in entrepreneurship and small business management. These fundamental concepts include

- *Entrepreneurship;*
- *Recognize and evaluate opportunities;*
- *Plan, start and operate a business;*
- *Marketing and sales;*
- *and finance and business financing.*

Prerequisites:	Keywords :
<i>None</i>	<i>Entrepreneurship, management, business environment, accounting, commerce, finance</i>

Specific objectives of the course (OBJ_i):

- OBJ 1 :** *Identify the characteristics of entrepreneurs and as well as the risks, benefits, opportunities and disadvantages of being an entrepreneur*
- OBJ 2 :** *Identify the advantages and disadvantages of different types of opportunities*
- OBJ 3 :** *Identify the objectives, value of a business plan and the appropriate legal structure*

<p>OBJ 4 : <i>Identify the advantages and disadvantages of various sources of startup financing</i></p> <p>OBJ 5 : <i>Identify business operations: human capital needs, intellectual property issues, standard operating procedures, etc.</i></p> <p>OBJ 6 : <i>Develop a sales strategy, identify and analyze the costs/benefits of finding customers, identify how to retain customers, and determine the value and methods of communication.</i></p> <p>OBJ 7 : <i>Interpret basic financial statements, identify and analyze cash flows, and identify the company's break-even point.</i></p>

Necessary material :
<i>None</i>

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1.2	<p><i>The entrepreneur:</i></p> <ul style="list-style-type: none"> - <i>Identify the characteristics of entrepreneurs</i> - <i>Given a scenario including a self-assessment result, identify the strengths, weaknesses, and risk tolerance the self-assessment identifies and how to compensate with services</i> - <i>Given a scenario, recognize a business opportunity</i> - <i>Identify the risks, benefits, opportunities and disadvantages of being an entrepreneur</i> 	3h	OBJ 1
3.4	<p><i>Opportunity recognition :</i></p> <ul style="list-style-type: none"> - <i>Identify the advantages and disadvantages of different types of opportunities (for example, starting a new business, purchasing an existing business, and purchasing a franchise)</i> - <i>Given a scenario, analyze the demand for the good or service and opportunities in an environment</i> - <i>Given a scenario, identify customers or potential customers for a business</i> - <i>Given a scenario, recognize a value proposition</i> 	3h	OBJ 2

5.6	<p>Start a business :</p> <ul style="list-style-type: none"> - Identify the objectives and value of a business plan - Identify the appropriate legal structure, advantages and disadvantages for different legal structures for a business - Given a scenario, identify different types of licenses and regulations needed - Identify the pros and cons of various sources of startup funding: equity (friends/family, angel investors, venture capital), debt (bank, credit cards, personal loans), and grants (government, foundation, business) - In a given scenario, identify the support available to the business at the local, state, and federal levels - Identify ethical practices and social responsibilities of a company - Identify potential exit strategies for a business 	3h	<p>OBJ 3</p> <p>OBJ 4</p>
7.8	<p>Commercial operations :</p> <ul style="list-style-type: none"> - Based on a scenario, identify key positions and human capital needs (including compensation and benefits) - Given a scenario, determine if the work can be done by the owner or if employees or service providers are needed - In a given scenario, identify the required taxes - Using a scenario, identify intellectual property issues related to trademarks, copyrights and patents. - In a given scenario, identify standard operating procedures (e.g., setup, conduct, internal controls, segregation of duties) - Based on a scenario, identify the factors that led to sustainability 	3h	OBJ 5
9.10	<p>Marketing and sales:</p> <ul style="list-style-type: none"> - Based on a scenario, develop a sales strategy and identify the characteristics of a successful sale - Given a scenario, identify and analyze the costs/benefits of finding customers - Based on a scenario, identify how to retain customers and develop a relationship with loyal customers - Based on a scenario, determine the value and methods of communication, including: websites, brochures, social media and advertising. 	3h	OBJ 6

11-14	<p>Financial management :</p> <ul style="list-style-type: none"> - Given a scenario, interpret basic financial statements such as income statements and balance sheets - Using a scenario, identify the factors that influence credit ratings and the importance of a positive credit rating - From a list of expenses, identify which ones are fixed or variable - Given a scenario, identify the factors that impact the price for the customer - Given a scenario, identify and analyze cash flows, including accounts receivable, accounts payable, inventory and debt. - Given a scenario, create a cash budget - Given a scenario, identify the company's break-even point 	6h	OBJ 7

Course Specification

Connected objects (IOT)

1. General

Coded	TV-504	Level/Semester	3/5	Coefficient	1.5	Credits	2
Course	Electromrcanical engineer					Volume. H. (CI)	0
Responsible	Mouhedine BELGHITH					Volume. H. (TP)	21
Module	Connected objects (IOT)					Version	09/2023

Course description (Course objective):

This course introduces students to the world of the Internet of Things (IoT) by providing a hands-on introduction to the design and programming of IoT systems. Through the study of different programmable boards, sensors and actuators, learners gain a fundamental understanding of IoT technology and basic programming skills to create simple applications and interact with connected devices

Prerequisites:

- **Basic Computer Knowledge:** A general understanding of computer science and programming concepts is beneficial in tackling the fundamentals of programming in IoT.
- **Electronics:** Basic knowledge of electronics and circuits can be helpful in understanding the hardware components used in IoT systems.
- **Interest in emerging technologies:** A curiosity and interest in new technologies, particularly in the area of Internet of Things, is essential to gNonep the concepts and practical applications of the course

Keywords :

IoT, Embedded Programming, Sensors, Actuators, IoT Cards, Wireless Connectivity, IoT Protocols, Embedded Systems, Interfacing

Specific course objectives (OBJ):

OBJ 4 : Understanding of IoT: Gain an in-depth understanding of the fundamental concepts of the Internet of Things, including its applications, challenges and opportunities.

OBJ 5 : Mastery of IoT components: Learn to identify, use and integrate different sensors, actuators and hardware boards to create simple IoT systems.

OBJ 6 : IoT Application Programming: Develop basic programming skills to create simple applications and interact with connected devices.

OBJ 7 : IoT System Design: Design and plan simple IoT systems using hardware and software components tailored to meet specific needs.

Necessary material :

- IoT development boards: Arduino Uno , Nonepberry Pi, ESP8266, ESP32, etc., to experiment with different microcontrollers and hardware platforms.
- Various sensors and actuators: Temperature, humidity, movement, light sensors, actuators such as LEDs, motors, relays, to understand their operation and integration.
- Breadboards and electronic components: Starter kits with breadboards , resistors, capacitors, connection wires, to create prototypes and simple circuits.
- Wireless Communication Modules: Wi-Fi, Bluetooth, Zigbee , LoRa, etc. modules, to experiment with different wireless communication technologies used in IoT systems.
- Laptop or Desktop: For software development, programming, and interacting with IoT devices.
- Basic accessories and tools: Connection cables, soldering tools (if applicable), multimeter, and other basic tools for electronic manipulations.
- IoT Starter Kits: Ready-to-use kits providing a variety of sensors, actuators, and components to quickly experiment and understand basic concepts.

2- Content elements (Practical work)

Week(s)	Activities/Content elements	No. HR	Goals
01	<p>Introduction to IoT and basic concepts</p> <ul style="list-style-type: none"> ▪ Understanding of IoT fundamentals. ▪ Exploring IoT applications and use case examples. 	1h30	Getting to know the fundamentals of IoT, exploring real-world applications and use case examples
02-03	<p>Exploring microcontrollers and IoT boards</p> <ul style="list-style-type: none"> ▪ Presentation and handling of various microcontrollers (Arduino, etc.). ▪ Practical implementation with hardware platforms. 	3h	Overview of different hardware platforms, handling and practical implementation with microcontrollers such as Arduino or Nonepberry Pi
04	<p>Introduction to embedded programming</p> <ul style="list-style-type: none"> ▪ Learning the basics of programming for embedded devices. ▪ Creation of simple programs to control hardware components. 	1h30	Learning the basics of programming for embedded devices, creating simple programs to control hardware components
05	<p>Using IoT sensors</p> <ul style="list-style-type: none"> ▪ Identification and manipulation of various types of IoT sensors . 	1h30	Discovering sensors used in IoT systems , experimenting with different types of sensors to collect data.

	<ul style="list-style-type: none"> ▪ Experimentation to collect data with different sensors. 		
06-07	<p>Interfacing with actuators</p> <ul style="list-style-type: none"> ▪ Practice controlling actuators in response to sensor data. ▪ Manipulation and control of actuators to perform actions. 	3h	Practice controlling actuators to perform actions in response to data captured by sensors.
08	<p>Wireless Connectivity for IoT</p> <ul style="list-style-type: none"> ▪ Exploring and configuring wireless technologies for IoT. ▪ Data transmission using wireless communication protocols. 	1h30	Exploration of wireless communication technologies used in IoT, configuration and use of these protocols for data transmission.
09	<p>Advanced programming of IoT devices</p> <ul style="list-style-type: none"> ▪ Deepening IoT programming skills. ▪ Integration of advanced functionalities into IoT applications. 	1h30	Deepening programming skills to create more complex IoT applications, integrating advanced features.
10	<p>Power and energy management</p> <ul style="list-style-type: none"> ▪ Understanding of energy management strategies for IoT devices. ▪ Optimization of energy consumption to improve system efficiency. 	1h30	Understanding of energy management strategies to extend the life of devices and improve their energy efficiency.
11-12	<p>Design of simple IoT projects</p> <ul style="list-style-type: none"> ▪ Application of knowledge to design and implement IoT projects. ▪ Integration of sensors, actuators and connectivity for simple projects. 	3h	Exploring the basics of IoT security, identifying vulnerabilities, and methods for protecting systems.
13	<p>Testing and debugging IoT systems</p> <ul style="list-style-type: none"> ▪ Use of testing methods to verify the operation of systems. ▪ Identification and resolution of potential problems. 	1h30	Application of testing methods to verify the operation of IoT devices, identification and resolution of potential problems.
14	<p>Evaluation of the final IoT project</p> <ul style="list-style-type: none"> ▪ Presentation, demonstration and evaluation of final IoT projects. ▪ Putting into practice the skills and knowledge acquired in the course. 	1h30	Evaluation, presentation and demonstration of the final project, putting into practice all the skills acquired during the course

3- Evaluation methods & Marks Distribution

Type of assessment	Yes No	Tx Weighting
CC - Continuous assessment (Test/Quiz, Presentation, Report, etc.)	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
DS - Duty to Monitor	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
EE - Written test (Final exam)	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
EP - Practical test (TP- TP exam / MP- Mini project)	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	

- Material 100% TP : Average = 20% CC + 80% EP
- 100% CI material : Average = 40% DS + 60% EE
- CI+TP material : Average = 20% DS + 20% EP + 60% EE

4- Evaluation criteria

- Authorized documents : Yes No
- Authorized search engine : Yes No
- *Criterion 1: Clarity of ideas (5 points)*
- *Criterion 2: methodological approach (5 points)*
- *Criterion 3: innovation (5 points)*
- *Criterion 4: presentation and mastery (5 points)*

- The Things Network: <https://www.thethingsnetwork.org/> - Community platform for IoT, offering resources, tutorials and tools for building and connecting LoRaWAN networks .
- IoT For All: <https://www.iotforall.com/> - Platform dedicated to IoT, offering articles, use cases, guides and resources for IoT professionals.
- Embedded Artistry : <https://embeddedartistry.com/> - Blog and resources focused on embedded and IoT, covering topics such as software development, hardware design, and best practices.
- IoT Security Foundation : <https://www.iotsecurityfoundation.org/> - Organization focused on IoT security, providing best practices, guidelines and resources for securing IoT systems.

7- Working environment (Facilities necessary for learning)

- Material :
 - Microcontrollers like Arduino, Raspberry Pi, ESP32/ESP8266.
 - Various sensors (temperature, humidity, movement sensors, etc.).
 - Actuators (motors, relays, LEDs, etc.).
 - Breadboards , connection wires, electronic components.
- Software:
 - Integrated development environment (IDE) adapted to the microcontroller used (Arduino IDE, PlatformIO , Thonny , etc.).

- Software for modeling and simulation of IoT systems (like Fritzing , Tinkercad , or simulators specific to certain sensors or microcontrollers).

subject Sheets Projects and internships

Course of Internships at EPI

Importance of Internships:

Internships in companies are an integral part of the EPI Group's training.

These internships in companies are mandatory for obtaining the diploma.

Also, the EPI Group pays particular attention to their progress.

During these internships, students develop their personal qualities, learn to work in a team and carry out projects.

Professional internships must be validated at the end of a defense.

Types of Internships:

Internships in companies are of three types:

- **Introductory Internship:** they concern 3rd year students
 - ✓ Objective: To give students the opportunity to discover the professional world and join the company.
 - ✓ Minimum duration: 1 month

- **Professional internships** (design and/or implementation of projects linked to the specialty): they concern 4th year students
 - ✓ Objective: The student is expected to carry out the design and/or implementation of projects related to his specialty
 - ✓ Minimum duration: 1 month

- **PFE internships:** they concern 5th year students
 - ✓ Objective: Implementation of all the skills acquired during schooling to carry out a project allowing one to project oneself into the professional world
 - ✓ Minimum duration: 16 weeks

The EPI Group supports its students during these internships and provides them with the Internship Service for coordination with the different departments and host companies (choice, validation, etc.).

Evaluation of the Internships:

The internship results in the writing of a report, which must be presented before a jury. This jury must be composed of at least two members:

- A president who must be a teacher from the EPI Group.
- An examiner: who must be a teacher from the EPI Group.
- The university supervisor who must be a teacher from the EPI Group.
- An internship tutor who must represent the host structure.

All internships must be validated at the end of a defense.

For this, each student is required to submit to the internship service:

- A connection form (to download from the “Internship forms” menu on our website episup.com)
- An internship certificate obtained from the company and duly completed and signed.
- Supervision monitoring sheet duly completed by the educational supervisor
- Company appreciation form: duly completed by the professional supervisor
- The internship report bearing the EPI Group cover page (to be downloaded from the “Internship forms” menu) in at least two copies (depending on the number of jury members) and one scanned copy.

Course Specification

Projects and internships (PFE, Professional internships, Introductory Internship)

*** PFE**

1. General

Coded	Pro- 5 2 03	Level/Semester	3/S6	Coefficient	10	Credits	24
Course	Engineering course					Flight. H. (CI)	
responsible	Internships department					Flight. H. (TP)	
Module	PFE					Version	09/2023

Course description (Course objective):

This involves the implementation of all the skills acquired during schooling to carry out a project, generally proposed by a company, allowing one to project oneself into the professional world.

The student works full-time within the company and is supervised by a teacher.

During an End of Study Project (PFE), the student is led to develop a problem based on a specific professional situation.

The main objective of this last internship is to affirm the skills of our future engineers and to prepare them effectively for their entry into professional life.

The subject of the PFE internship generally leads the future engineer to encounter challenges and allows him to learn to act accordingly.

Prerequisites:	Keywords :
...	...

Specific objectives of the course (OBJ):

- OBJ 1 :** The PFE ideally allows the intern to carry out a project from A to Z...
- OBJ 2 :** Go through all the stages necessary for its realization, from the study of specifications to final delivery
- OBJ 3 :** Participate in technical studies: definition of problems, acquisition, compilation and analysis of data, formulation of hypotheses and recommendations;
- OBJ 4 :** Put the student in the position of an engineer,
- OBJ 5 :** Refine their first career orientations,
- OBJ 6 :** Measure the role of the company's different engineers,
- OBJ 7 :** Discover the different functions and their relationships,
- OBJ 8 :** Write an end-of-studies report.

Necessary material :

...

2- Content elements (Course)

Week(s)	Chapters/Content Items	No. HR	Goals
1-2	<i>Discover society (observation and learning)</i>		Read all documents relevant to the internship related to the company and the project Learn the tools and software used in the business. Meeting with the team and supervisor Introduction to projects and internship objectives
3-4	Establishing project objectives	...	Clearly define the objectives to be achieved with the project. Observe operations in the field Make a project schedule Establish a Problem
4-5	Project planning and design	...	project delivery , including specific steps to follow and resources required. Design potential solutions to meet project objectives
5-7	Data collection and situation analysis		Collect relevant data necessary to carry out the project. Analyze data to understand the causes of the problem using analytics tools
7-8	Project implementation		Implement the solutions designed within the project framework .
8-9	<i>Autonomy and responsibility</i>		Take more responsibility in the project Work more independently Regularly take into account the progress of tasks Work collaboratively with other team members
9-12	Testing and validation		Test the developed solutions and ensure that they meet the specifications and needs of the project. Validate the results obtained with the internship supervisor or the team responsible for the project in the company.
12-14	<i>Close the work and propose forecasts</i>		<i>Prepare an internship report</i>

3- Content elements (Practical work)

Week(s)	Activities/Content Items	No. HR	Goals
---------	--------------------------	--------	-------

...
...
12	Practical exam, mini-project defense, ...	3h	Summative evaluation

4- Evaluation methods & Marks Distribution

- The student must submit a PFE report with a monitoring sheet signed by their educational supervisor in order to validate authorization for submission on time.
- In the absence of an internship certificate on the day of the defense, the jury will not accept the student and consequently the student will have a zero (unless the student brings back an authorization signed by the internship service)
- The evaluation is carried out by at least three members of the jury (supervisor, president of the jury and rapporteur)
- The evaluation is also done by assigning grades on a well-detailed report which is validated by the department head and the director.
- Among the evaluation criteria: Oral Expression, Rigor of the approach, content of the presentation, Discussion, Behavior and attendance, structure and content of the report, etc.

5- Evaluation criteria

Criteria	
Oral Expression: - Ability to keep the audience attentive - Judicious use and quality of transparencies. - Vocabulary, use of appropriate technical terms - Respect the planned time.	/04
Steps : - Rigor of the approach: choice, tools, method and synthesis	/04
Content of the presentation: - Level of know-how, technicality... - Personal work carried out. - Presentation of objectives achieved	/08
Discussion : - Mastery of aspects related to the subject, justifications, etc.	/04
Behavior, Attendance, Punctuality and Motivation	.. /04
Personal contribution and initiative	.. /06
Scientific and technological knowledge	.. /05
Level of know-how , technicality, creativity and functionality	.. /05
Report Structure -Acknowledgements, summary, introduction, presentation of the company, specifications, technical content, conclusion - Balanced ratio (Volume) - Clear and progressive presentation of information - Reasonable use and definition of technical terms, standardization	.. /06
Content of the Report - Presentation of the work requested (specifications) then of the entire made work. - Technical content - Meets standards -Importance of personal work (volume and level) - Justification for the choice of solutions adopted. - Comparison of the objectives achieved with the content of the specifications - Appendices, Bibliographies	.. /08
Presentation of the report -Pagination, layout -Spelling, grammar, style. - Clarity and quality of figures, diagrams, etc.	.. /06

* *Professional internships*

Coded	Pro- 5 2 02	Level/Semester	3/S6	Coefficient	10	Credits	3
Course	<i>Engineering course</i>					Flight. H. (CI)	
responsible	Internships department					Flight. H. (TP)	
Module	Professional internships					Version	09/2023

Course description (Course objective):

During his professional internship, the student, who has achieved his 4th year successfully, must complete a practical case whose theme depends on his specialization

The student works full-time within the company but is not supervised by a teacher.

It's a period of practical training or work experience undertaken by a student in a professional setting relevant to his field of study and career goals.

It provides the intern with the opportunity to apply theoretical knowledge gained in academic settings to real-world scenarios, gaining practical skills and insights into their chosen profession.

Interns may also have the opportunity to network with professionals in their field, build valuable connections, and sometimes even secure PFE opportunities upon completion of the internship.

Prerequisites:

...

Keywords :

...

Specific objectives of the course (OBJ):

OBJ 1 : Providing students with practical, real-world experience in their field of study or desired career path.

OBJ 2 : Develop and refine technical skills, soft skills, and industry-specific competencies necessary for future success in the profession.

OBJ 3 : Receive constructive feedback from supervisors and mentors to identify strengths, areas for improvement, and opportunities for further growth.

OBJ 4 : Gain insights into the expectations and realities of the workforce, facilitating a smoother transition from student life to professional employment post-graduation.

OBJ 5 : Write a professional internship report.

Evaluation methods & Marks Distribution

- *The student must submit a professional internship report with a Internship certificate and Company appreciation form duly completed and signed in order to validate authorization for submission on time.*
- *In the absence of an internship certificate on the day of the defense, the jury will not accept the student and consequently the student will have a zero (unless the student brings back an authorization signed by the internship service)*
- *The evaluation is carried out by at two members of the jury.*
- *The evaluation is also done by assigning grades on a well-detailed report which is validated by the department head and the director.*
- *Among the evaluation criteria: Oral Expression, Rigor of the approach, content of the presentation, Discussion, Behavior and attendance, structure and content of the report, etc.*

* *Introductory Internship*

Coded	Pro- 5 2 01	Level/Semester	3/S6	Coefficient	10	Credits	3
Course	<i>Engineering course</i>					Flight. H. (CI)	
responsible	Internships department					Flight. H. (TP)	
Module	<i>Introductory Internship</i>					Version	<i>09/2023</i>

Course description (Course objective):

It is an internship for discovering the company the student spend time observing and shadowing experienced professionals within various departments or teams. This allows them to gain insights into different aspects of the organization's operations and understand the roles and responsibilities of various team members.

As the internship progresses, the student is gradually given more opportunities to participate in hands-on tasks and projects under the guidance and supervision of mentors or supervisors. These tasks may be relatively simple or routine at first but gradually increase in complexity as the student gains confidence and demonstrates competence.

Prerequisites:

...

Keywords :

...

Specific objectives of the course (OBJ):

OBJ 1 : Help students explore different career paths within their field of study or industry by exposing them to various departments, roles, and responsibilities

- OBJ 2 :** Provide students with opportunities to develop fundamental skills relevant to their field, such as communication, teamwork, problem-solving, and time management
- OBJ 3 :** Offer students practical, hands-on experience through tasks, projects, and assignments that contribute to the organization's goals and objectives.
- OBJ 4 :** Facilitate networking opportunities for students to connect with professionals in their field,
- OBJ 5 :** Prepare students for future internships or employment opportunities by equipping them with essential skills, experiences, and insights into the professional world.
